Test 1

Writing task 1

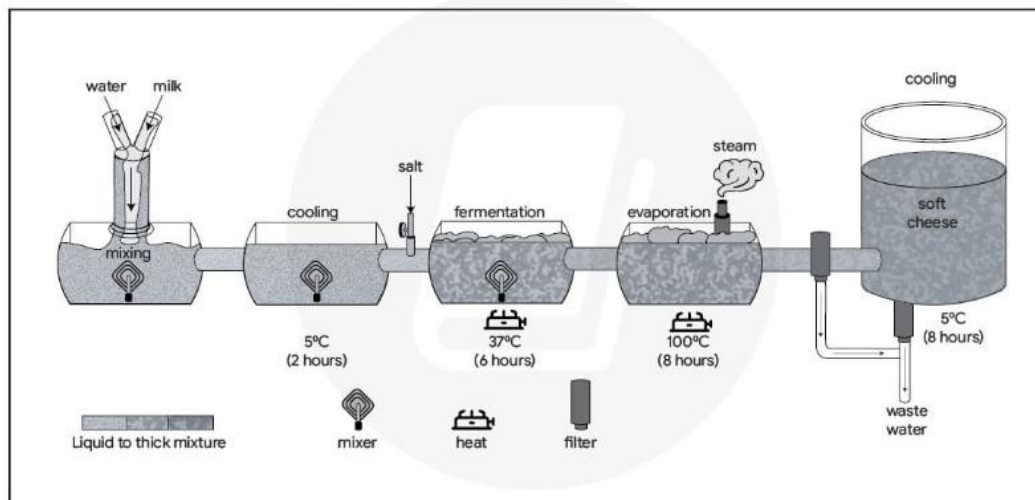

You should spend about 20 minutes on this task.

The diagram below illustrates the process of producing soft cheese.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Process for making soft cheese

The report gives information about how soft cheese is produced. In general, there are 5 main stages of the process: combining necessary ingredients (salt, water and milk), cooling, fermentation, evaporation, and lastly cooling again (but in a relatively larger container and for more period). Notably, the process requires a set of special tools like mixer, heat, and filter, while the cheese slowly turns to solid during stages, all of which occur in storage tanks.

The first stage is when water and milk are added together to be blended with a mixer. Then this mixture is left to be cooled down at 5 degrees Celsius for two hours before going to another process, where salt is added to the substance, and it is fermented for 6 hours while mixing and applying heat at 37 degrees temperature. Meanwhile, during fermentation there is steam gathered in the tank, which only is released while liquid is evaporating. During this stage, heat is applied again, but at higher temperature(100* C) for 8 hours, By that time, it has already started to thicken.

The last stage of making soft cheese is quite complicated, where before going to be cooled, waste water is disposed of. Cooling process takes place in a larger tank at 5 degrees Celsius for another 8 hours; at the same time, waster water is over released, and the product is finally ready and has enough thickness for consumption.

237 words

Useful language chunks and vocabulary

be produced

main stages of the process

combine / be combined with

storage tanks

be blended with a mixer

be cooled down at (temperature)

go through another process / proceed to the next stage

undergo fermentation

apply heat / heated at

steam is released

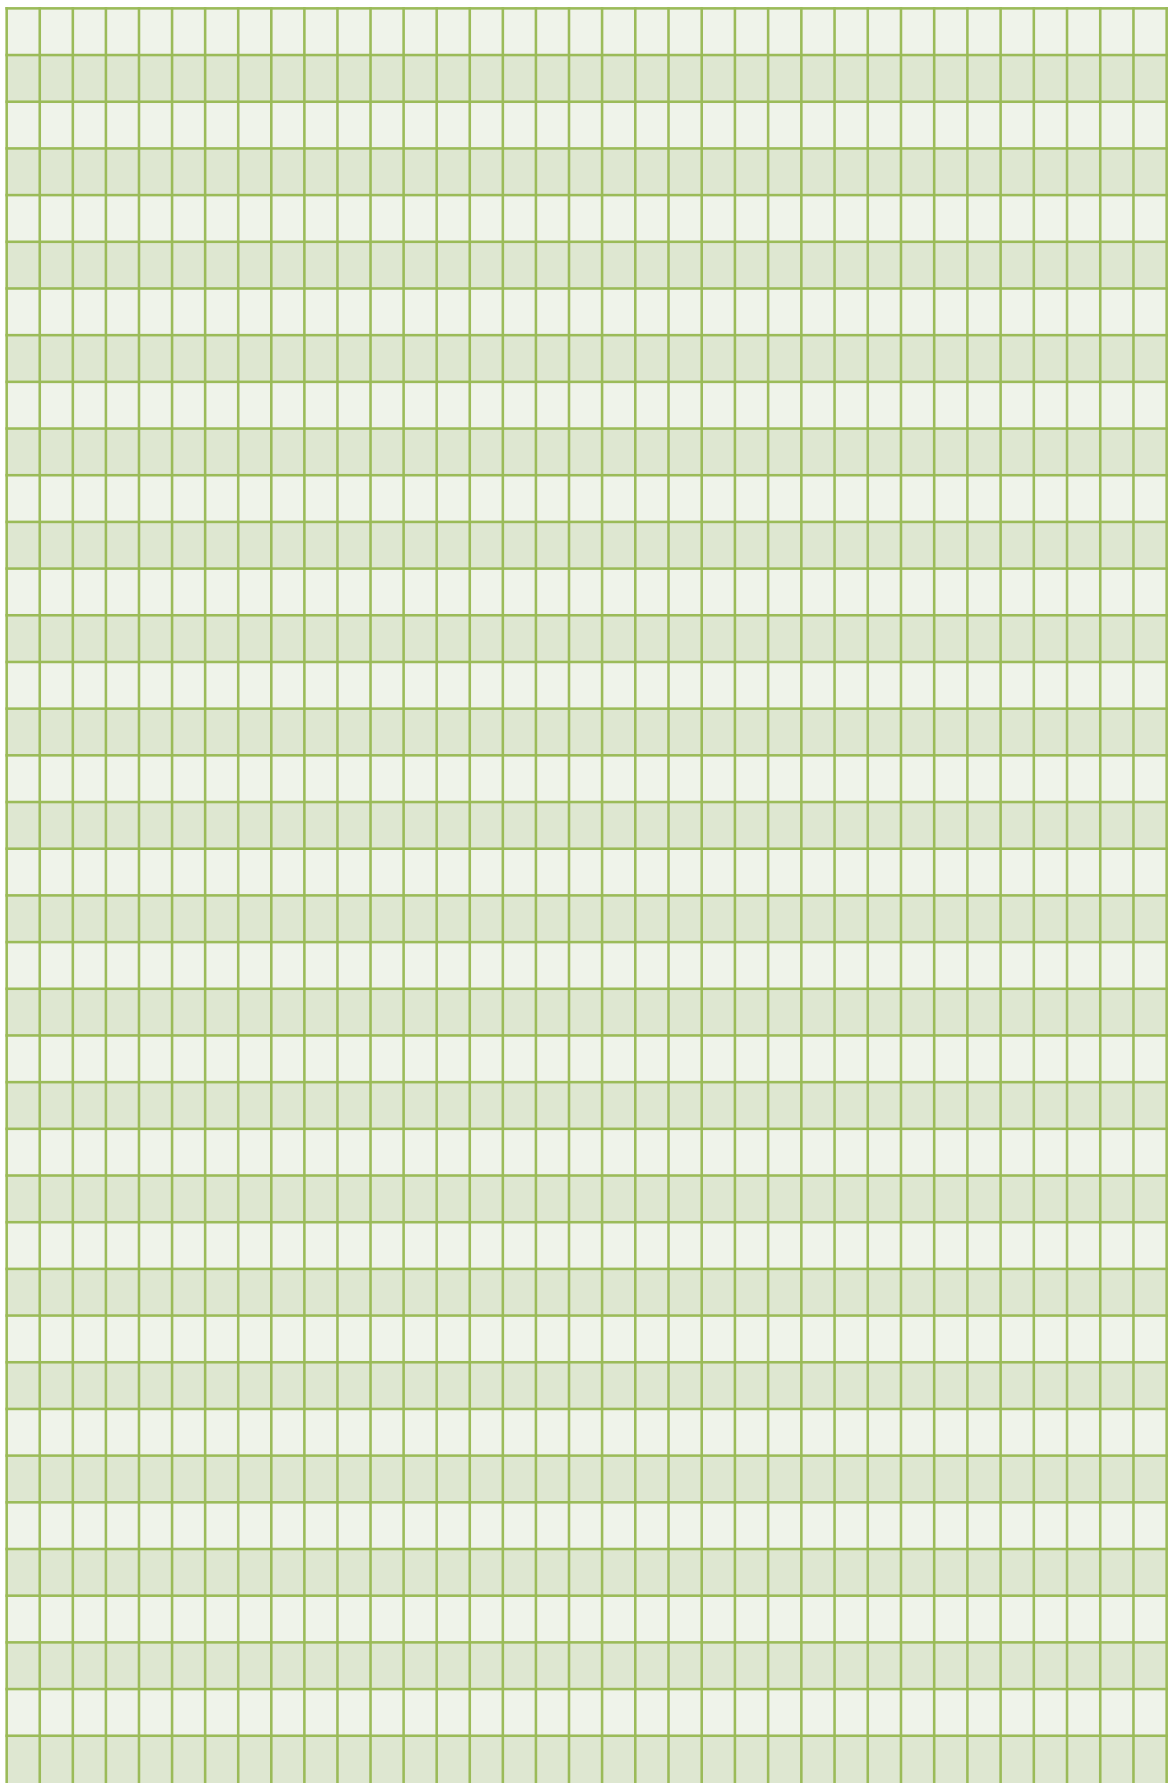

the mixture starts to thicken / gradually solidifies

dispose of waste water

take place in / occur in

ready for consumption / final product

achieve the desired consistency / thickness

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Many people are afraid to leave their home because of their fear of crime. Some people believe that more action should be taken to prevent crime, but others feel that little can be done.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words.

The high crime rate makes it difficult for many people to go outside of their homes, as they worry about the negative consequences or being a victim in a crime scenario. While there are those who advocate for measures to tackle this situation to create a safe and worry-free living environment, others believe there is nothing we can do. Personally, I side with the former view for two main factors.

Of course, it is challenging to mitigate all issues associated with crime completely. Thanks to modern technology, it is quite understandable that the government cannot fend crime off from society entirely, as criminals can find new ways to break the law. Moreover, it is also of no use to convince citizens that they are secure, as even a single piece of negative news about crime incidents can spark widespread chaos and public anxiety. Therefore, some may assume that doing away with the fear of crime is not feasible.

Having said that, I still remain convinced that there is a silver bullet to reduce the crime rate and set up a peaceful setting for citizens. The utopian world is somewhat achievable, and it can be done through the governmental power and resources. Only through reinforcing the security systems and police of the country to a level, where public spaces are monitored through surveillance cameras and patrolled by police officers, can a society remain safe. When this sort of environment is created, offenders might be less willing to commit crimes because they may fear being recorded and caught. Such an environment would eliminate fears of criminal victimization or violent incidents

in public spaces. In cities like London and Singapore, the presence of surveillance cameras and police patrols has been linked to significant declines in criminal behaviour, for instance.

Another wise step towards this problem can be enhancing respect for social order. It means that people follow rules not because they must, but because they might feel it is the right thing to do, something which is rooted in an inner sense of discipline that keeps society stable and safe. In this case, the government plays a major role by legislating fair and transparent laws, and police act firmly but fairly, applying the law equally to all citizens.,say, Japan is one of the safest places to walk in the world, as it displays an extremely low rate of crime, where people can walk alone at night without feeling anxious or threatened.

In summary, a near-utopian society free from crime can be achieved regardless of what some may feel about its practicality. In this regard, it requires a huge amount of effort by the authorities to ensure consistent monitoring and maintain strong social order, as far as I am concerned.

455 words

Useful language chunks and vocabulary items from this essay

Crime rate — the number of crimes happening in a certain area over a period of time.

Victim — a person who suffers harm from a crime or accident.

Consequences — the results or effects of an action.

Advocate for — to publicly support or recommend something.

Mitigate — to make something less harmful or serious.

Fend off — to prevent or stop something unpleasant or unwanted.

Chaos — a state of complete disorder or confusion.

Feasible — possible or achievable.

Silver bullet — a simple, perfect solution to a complicated problem.

Utopian world — an ideal, perfect society.

Reinforcing — strengthening or making something more powerful.

Surveillance cameras — devices used to monitor public or private areas.

Patrolled — regularly watched or guarded by police officers.

Offenders — people who commit crimes.

Victimization — the act of someone being made a victim.

Behaviour — the way someone acts or conducts themselves.

Social order — the organized and stable functioning of society.

Legislating — making or enacting laws.

Transparent laws — rules that are fair, open, and easy to understand.

Authorities — people or organizations with power to enforce rules and maintain order

Test 2

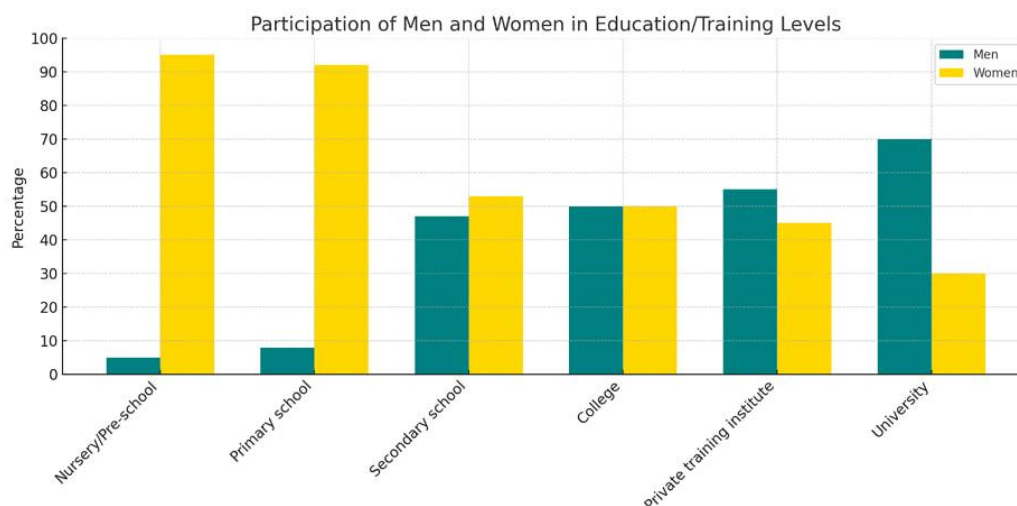

Writing task 1

You should spend about 20 minutes on this task.

The chart shows the percentage of male and female teachers in six different types of educational setting in the UK in 2010.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report outlines data regarding proportions of male and female teachers in different types of institutions - Nursery/pre preschool, primary school, secondary school, colleges, private training institutes, and lastly universities - in the UK in the year 2010 in the bar graph.

Overall, female teachers were more commonplace in nursery, pre schools and primary schools than male teachers, as the age was an important factor, showing a higher percentage of female teachers for younger students. However, a higher percentage of older students were taught by male teachers, such as the ones in the university. There was, interestingly, a little disparity between the proportions of male and female teachers in institutions like secondary school and private training institutes, whereas the proportion of both genders was identical in colleges.

Turning to details, at the youngest level of education - nursery/pre school, nearly 95% of teachers were females, while a mere 5% of male teachers worked there. A quite similar gap can be observed in primary schools, with an increase in the proportion of male teachers (8% males vs 92% females). However, the difference between men and women shrunk significantly in secondary schools (47% and 53%), and there was no difference at all in colleges.

Regarding to the remaining educational settings, namely private training institutions and universities, there were more men as teachers than women. In the former educational setting, 55 % of teachers consisted males, and 10

points lower were females, while in the latter these figures accounted for a hefty 70% males and 30 % females - by far the largest percentage of men as teachers in one institution as opposed to other settings.

274 words.

Useful vocabulary and language chunks

Outlines – gives a general description or summary of something.

Proportions – the percentage or part of a whole.

Institutions – organized places of learning, like schools or universities.

Commonplace – happening often; very common.

Disparity – a noticeable difference between two or more things.

Identical – exactly the same or equal.

Turning to details – a linking phrase used to introduce specific information.

A mere – used to emphasize how small a number or amount is.

Gap – a difference between two figures or groups.

Shrunk significantly – became much smaller or less noticeable.

No difference at all – completely equal in amount or number.

Namely – used to introduce specific examples or items.

Consisted of – was made up of; formed by.

Accounted for – represented or made up a certain percentage.

By far the largest – used to emphasize the most extreme or highest value in comparison.

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Some people think it's better to choose friends who always have the same opinions as them. Other people believe it's good to have friends who sometimes disagree with them.

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words.

It is believed to be a better decision to have a company of friends who share similar perspectives, while there are those who advocate that those friends who can oppose to one's decision are actually a wise choice, as they can tell the downsides of the person and show the right way. Therefore, I support the latter view.

I do admit the importance behind the idea of connecting with like-minded friends.

This is because it can be interesting to spend time with such people, as people with completely two different areas of interest are hard to get along with, not to mention that there would be less topics to cover in casual gatherings. However, with those whose hobbies and perspectives align with their friends it may be beneficial, while they spend time together thinking about aiming to the same goal and can discuss topics they comply with. People who excel in sports and have no interest in politics can find it difficult to get along with those whose situation is vice versa, for instance.

The logic above may seem reasonable to some, yet I assume that friends who can challenge us can benefit in all sorts of ways. Firstly, they can shift their friends' opinions and expose them to alternative ways of doing or thinking about the same thing. People with diverse backgrounds and those who can vote against our ideas can enrich our beliefs, and broaden our horizons. Plus, they are able to show us our biases and the opinions we usually take for granted.

Another reason to surround ourselves with people who can say no to our ideas is the opportunity to see the world from different angles. For example, most things we imagine oftentimes become the reality, even though there is much more to experience. With such a circle of friends, one is exposed to different worldviews, since two individuals never share the same internal worlds. This can result in learning invaluable lessons from our friends and apply them to our future decisions.

In summary, it is plausible that hanging out with friends with opinions in accordance to ours can create a pleasing company, but it is far from being advantageous to us. I believe that disagreeing friends, however, can drive us to think out of the box and experience life in different views.

386 words

Useful vocabulary items and language chunks from this essay

connect with like-minded friends – build relationships with people who share the same interests and values

get along with – have a friendly and harmonious relationship

casual gatherings – informal meetings or social events

align with – match or agree with someone's ideas or goals

aiming to the same goal – working towards a shared purpose or objective

comply with – act in agreement with rules, opinions, or beliefs

the logic above may seem reasonable to some – a formal way to

acknowledge an opposing view

challenge us – push us to think critically or act differently

expose someone to alternative ways – introduce new perspectives or approaches

broaden our horizons – expand our understanding or knowledge

enrich our beliefs – make our opinions or values deeper and more meaningful

show us our biases – reveal our hidden prejudices or one-sided views

take for granted – fail to appreciate something because it seems normal or certain

see the world from different angles – understand life from multiple perspectives

circle of friends – a group of people one regularly socializes with

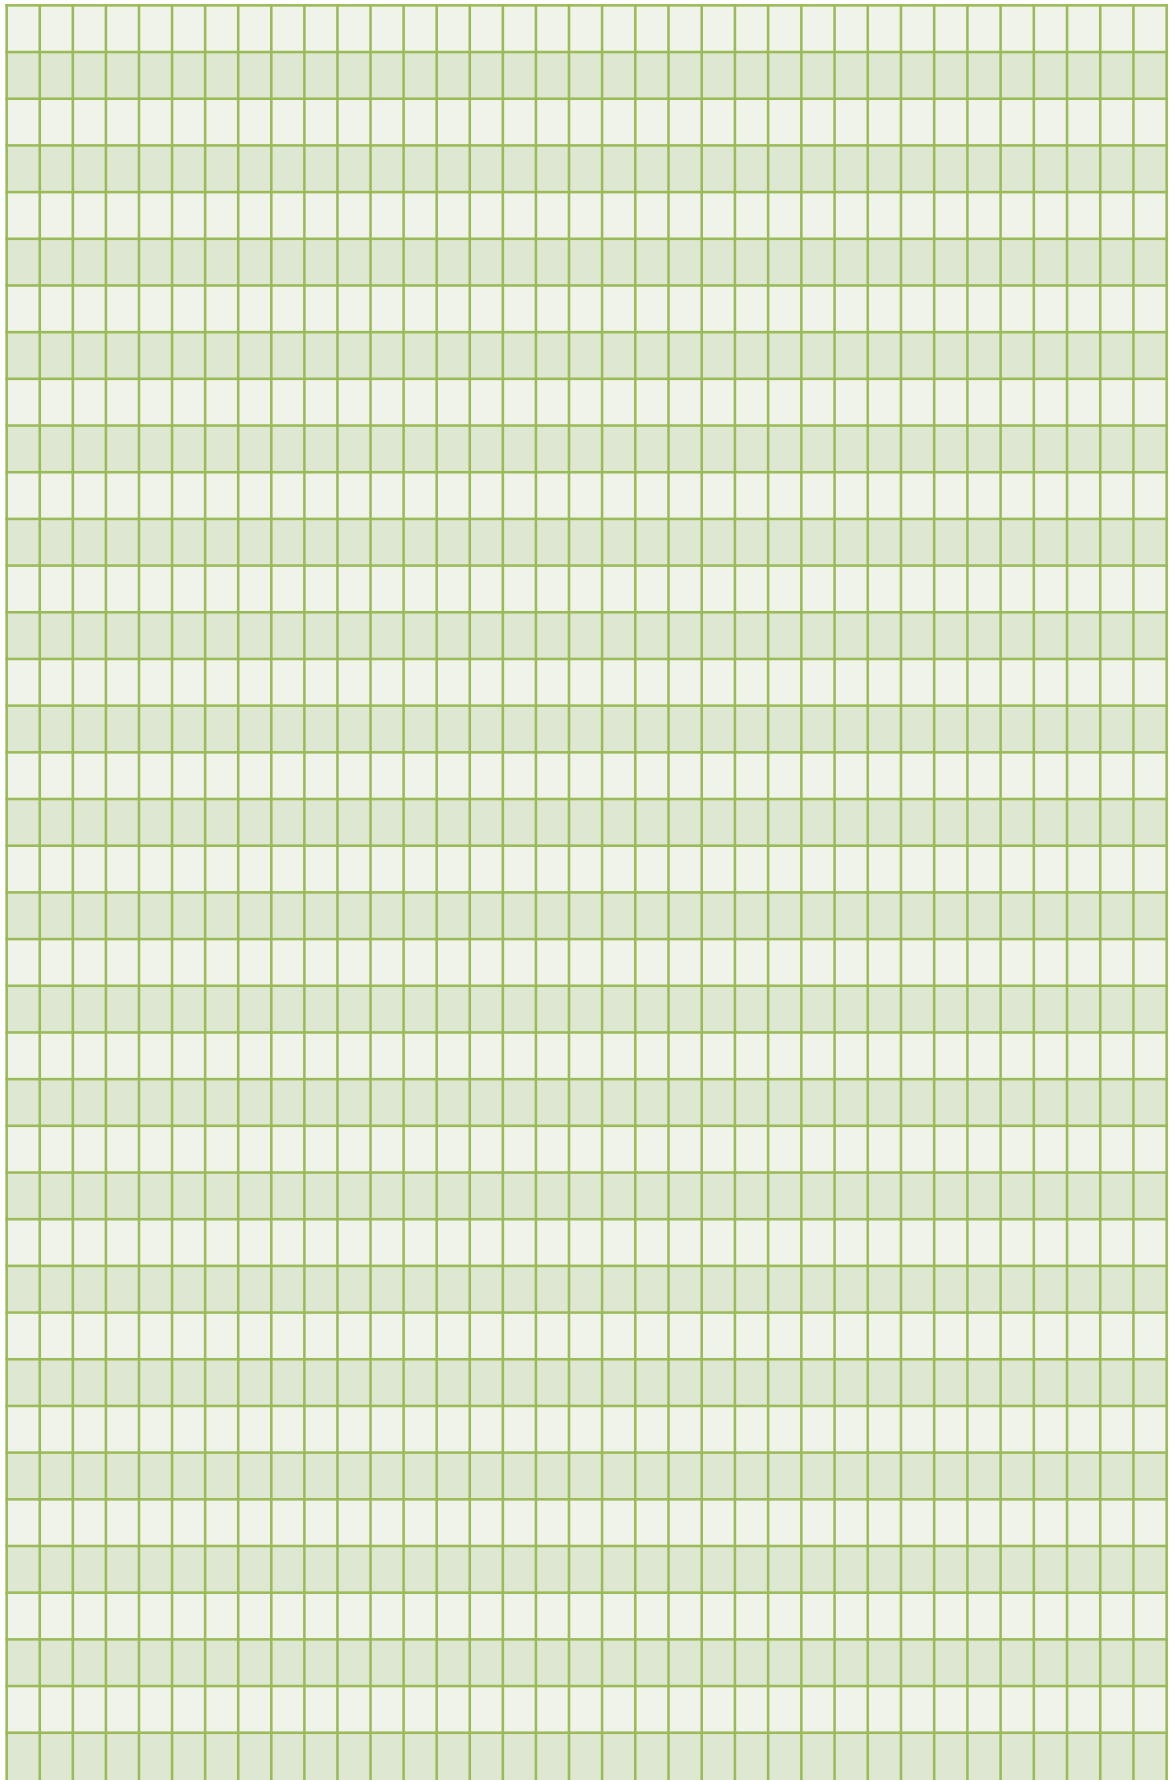

internal worlds – a person's private thoughts, emotions, and perceptions

invaluable lessons – extremely useful or important teachings

apply them to future decisions – use learned experiences in making later choices

opinions in accordance to ours – views that are similar or consistent with our own

think out of the box – consider creative or unconventional ideas

Test 3

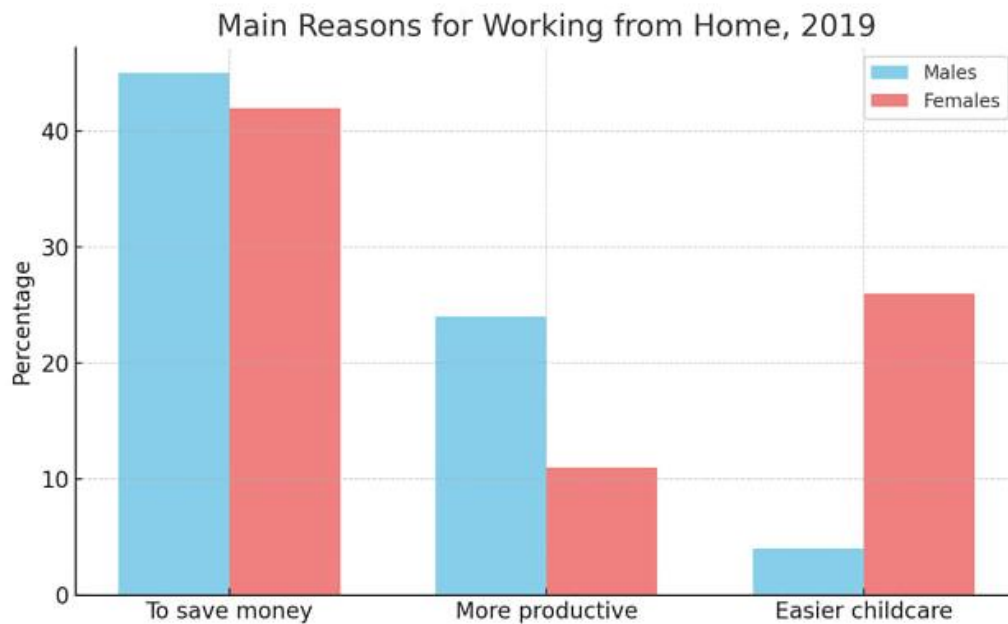

Writing task 1

You should spend about 20 minutes on this task.

The diagrams below show the main reasons workers chose to work from home and the hours males and females worked at home for the year 2019.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Hours of work per week	Males	Females
Under 10	3%	74%
10 to 30	16%	22%
Over 30	81%	6%

The report compares the percentage terms of hours of telecommuting among men and women in the table, while the bar graph shows the main reasons to prefer this type of work setting in 2019.

Generally speaking, out of three reasons mentioned, the most popular one was saving money for both genders, where there was only 3% disparity between men and women. In contrast, this gap further rose when it came to easier childcare, with more women reporting it as a motive than men. The majority of men worked for over 30 hours, while women worked remotely mostly under 10 hours.

Regarding results of why people chose the remote work, the most reported response was to save money among both sexes, with males accounting for a high of 43% and women 3 points lower, at 40%. Productiveness was another popular reason, where the percentage of males still exceeded that of women (25% vs 10%). However, the gap among results widened significantly, when easier childcare was in the question. This time nearly 28% of women reported it as a reason to work remotely, making it noticeably higher than that of men, which constituted a meager 5%.

As for the number of hours worked, 74% of all women spend under 10 hours working from home, while only 3% of men opted to do the same. working for 10 to 30 hours is the category where the difference is not as huge, yet the proportion of women was higher than men (16% of men vs 22% of women). However, 81% of men worked remotely, whereas mere 6% of women did the same — it is evident that in 2019 telecommuting was highly opted among men than females as the main mean of work.

288 words

Useful vocabulary items and chunks

telecommuting – working remotely, usually from home, using the internet

work setting – a particular type or environment of work (e.g., office, home, factory)

disparity between – a noticeable difference or inequality between two things

motive – a reason or purpose for doing something

worked remotely – performed one's job from outside the main office

main motive – the most significant or dominant reason behind an action

the most reported response – the answer given by the greatest number of people in a survey

accounting for – making up or representing a specific part or proportion

productiveness – the level of efficiency or effectiveness in producing results

widened significantly – became much larger or greater in difference

a meager 5% – an extremely small or insufficient amount

opted to do something – chose or decided to take a particular action

the difference is not as huge – the gap between two figures or groups is smaller

the proportion of – the percentage or part of a total number

highly opted among – very commonly chosen or preferred by a particular group

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Some people believe that student should pay full cost for their own study, because university education benefits individuals rather than society.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

There is a view that covering the tuition fees for university education should be a responsibility of students, as it brings about a great deal of benefits to them not the society. While I admit the immense justification behind this notion, considering the burden taxpayers might feel, I still lean towards the idea that the government should subsidize whole cost of university fees. This is mainly because of

the long-term societal advantages it offers to the common good.

Admittedly, the idea of self-accountability to bear the cost of university education may seem feasible. Studying university courses, students usually open a door of opportunities to earn higher-salary and career advancements mostly to their own advantage, and if the government attempts to cover the expense for them. this feels unreasonable as well as unfair to those paying taxes as this investment goes for aforementioned self-oriented benefits of students. Meantime, this money can be directed to more global and local issues like mitigating environmental or societal problems. which justifies their money paid.

Being said that, I maintain my opinion by the fact that this ultimately benefits the society as a whole. Ensuring and accruing the number of well-educated citizenry in the community can lead innovation and technological advancements in the long term. which could be a crucial step to resolve

above-mentioned problems in the society. Many western countries, as studies show, oftentimes focus on the development of education and provide full scholarship programs at universities for both international and local students, as this initiative can urge students to pursue education with the aim of enhancing societal well-being, for instance.

Furthermore, while this sort of financial aid to students by government ensures a well-educated population, it also helps to increase those taking part in civic life. With the increase of individuals who understand politics, economics and environmental matters, they tend to participate more in democratic processes, contributing to a community-oriented decisions that mostly have influence on their life, where this also helps the government to rule with fairness and justice, taking into account opinions of intelligent and community-minded people.

In conclusion, fully covered university education, of course, sounds a bit unfair to some individuals who feel like contributing not the society but students' self goals, yet it yields more upsides than they assume, creating opportunities to enrich the lives of all down the track and increase the amount of civic-minded individuals.

396 words

Useful Vocabulary & Chunks from this essay

Covering the tuition fees – paying the cost of university education.

A responsibility of students – something students themselves should handle or be accountable for.

Brings about a great deal of benefits – produces many advantages or positive outcomes.

The immense justification behind this notion – the strong reasoning or logic supporting this idea.

The burden taxpayers might feel – the sense of financial strain on those who pay taxes.

Subsidize the whole cost – to fully support or pay the expenses, usually by the government.

Long-term societal advantages – benefits that improve society over an extended period.

The common good – the welfare or well-being of the entire community.

Self accountability— the act of taking responsibility for one's own actions or costs.

To bear the cost – to take financial responsibility or pay for something.

Open a door of opportunities – to create new chances or possibilities.

Higher-salary and career advancements – better-paying jobs and progress in one's career.

To cover the expense – to pay for or handle financial costs.

Unreasonable and unfair – not logical and lacking fairness.

Mitigating environmental or societal problems – reducing the seriousness of global or social issues.

Ultimately benefits the society as a whole – in the end, helps everyone in the community.

A well-educated citizenry – a population of people with strong educational backgrounds.

Lead innovation and technological advancements – to drive forward new ideas and technologies.

Provide full scholarship programs – offer complete financial aid for students.

Enhancing societal well-being – improving the overall quality of life in a community.

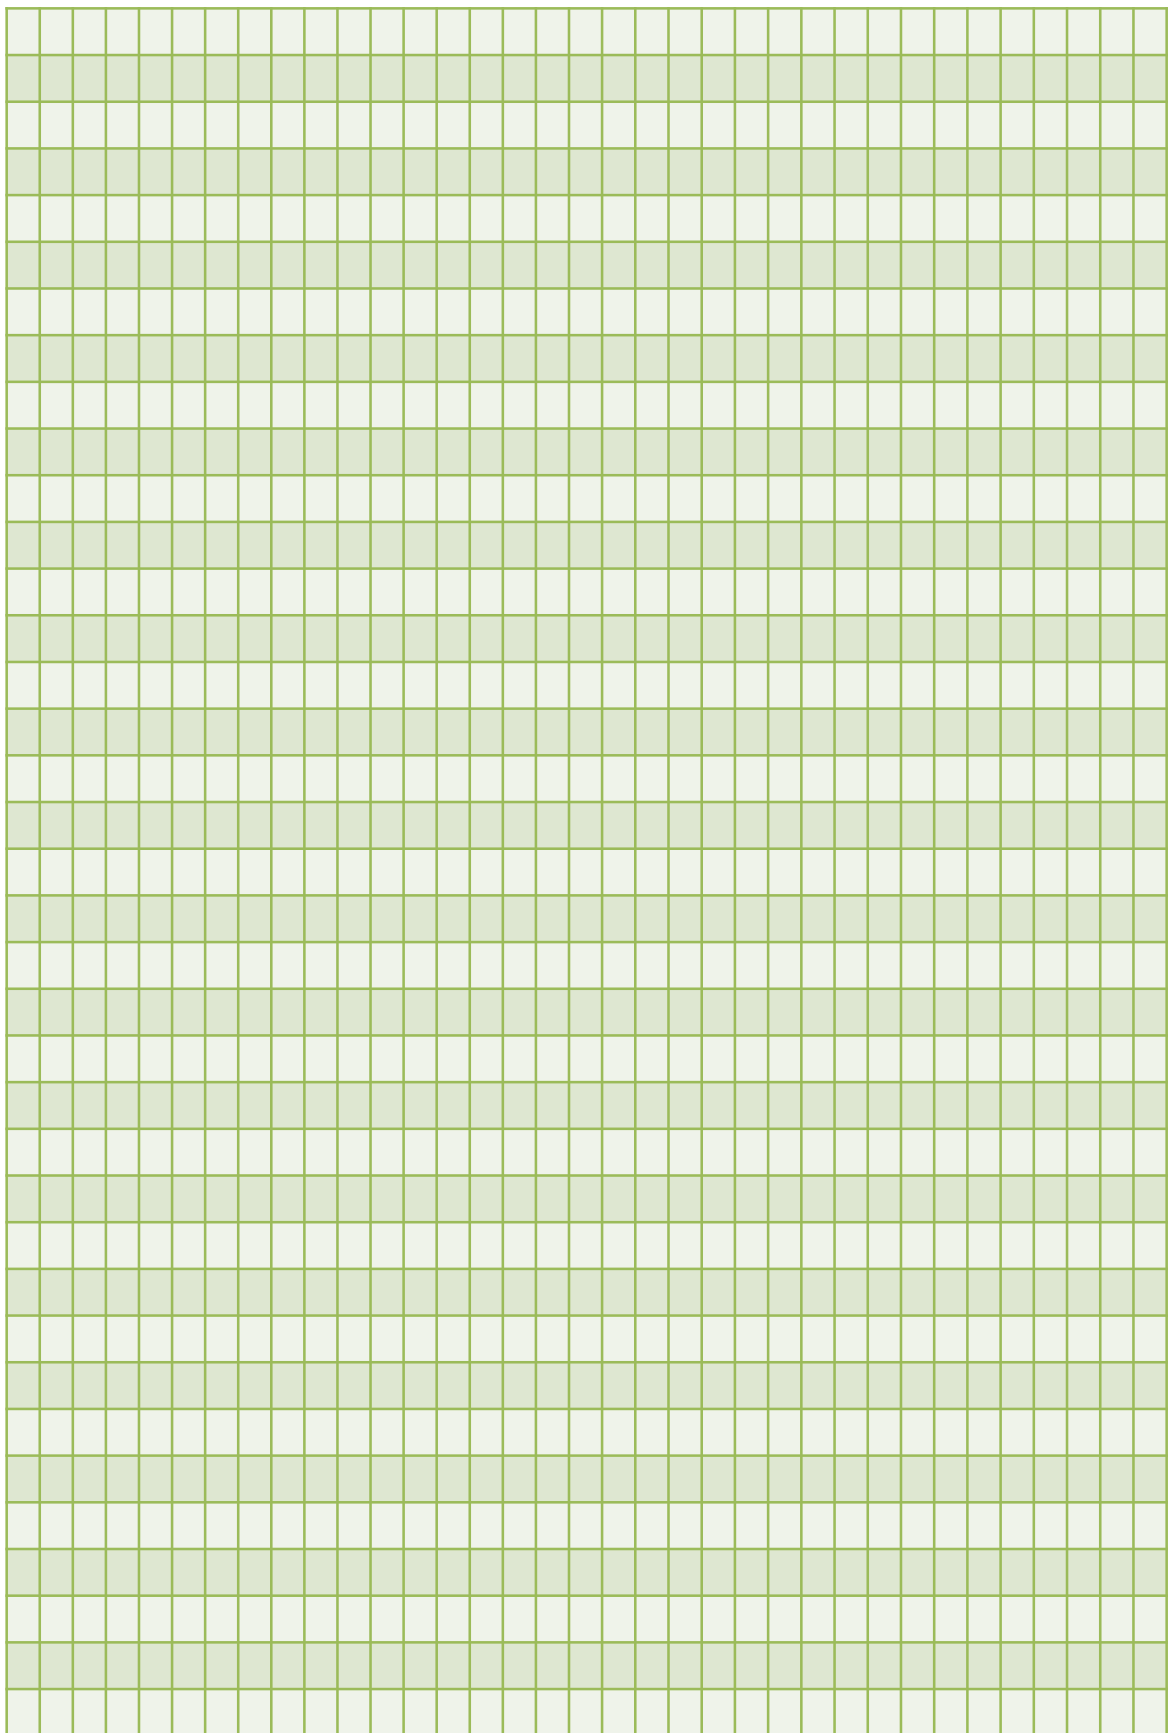

Financial aid to students – government or institutional support to help pay for education.

Taking part in civic life – participating in public or political affairs.

Community-oriented decisions – choices made with the interests of society in mind.

Rule with fairness and justice – to govern in an ethical and impartial way.

Civic-minded individuals – people who care about and actively contribute to their community.

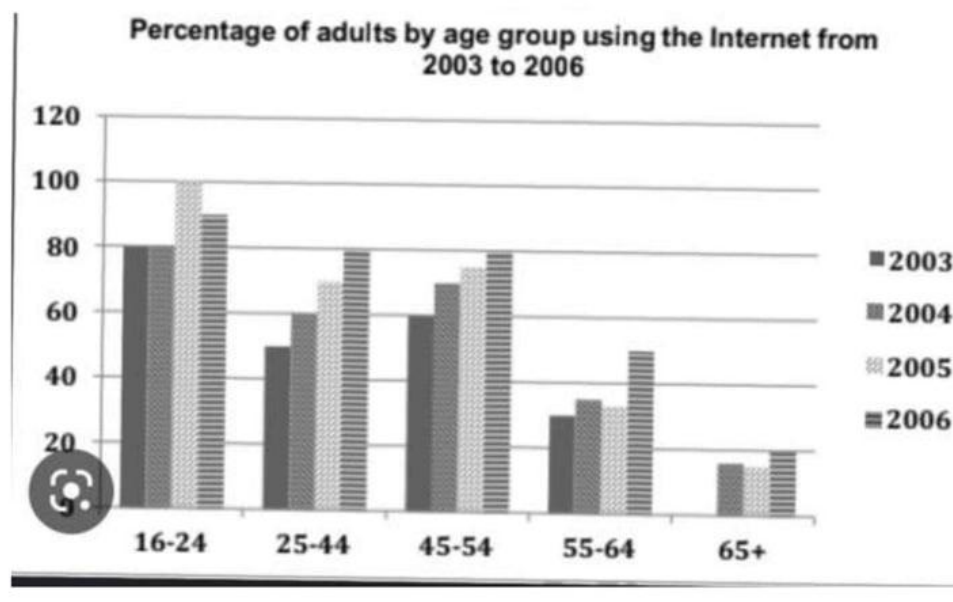

Test 4

Writing task 1

You should spend about 20 minutes on this task.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report outlines percentage terms of the internet usage of adults in group ranging from 16-24, 25-44, 45-54, 55-64, and lastly 65+ between 2003 and 2006 in the bar graph.

Generally speaking, the figures for adults of all generations increasingly rose, reflecting a universal expansion in internet adoption, where the youngest group representing the largest percentage of internet users over the period in the question. Older demographics, on the other hand, accessed the internet less frequently compared to other age brackets.

Starting with the youngest internet users, their proportions accounted for the all-time-high results throughout the time frame, the result of which in the first years was stable at 80%. It then surged to 100%, marking the chart-peak proportion in 2005 before declining to 90% the next year.

Similarly, the internet use of adults at the age of 25-44 and 45-54 experienced a sustained growth from 2003 to 2006. The former commenced at 45% and ended the period at 80%, while the initial point of latter was higher at 60% and hit 80% in 2006, converging with that of the former, and both came a close second in terms of the percent of the internet users. Another increase over these years was observed in the demographic group aged 55-64 years, which rather fluctuated over the first years(2003-2005) at around 30% and then significantly jumped to 50% — a group with the third most user percentage.

In comparison, the eldest group(adults over 65 years) lagged far behind in terms of the internet usage, with registering the least marked result. It plateaued between 2003 to 2005 and barely exceeded one-fifth of the total internet user proportions in 2006.

278 words

Useful Vocabulary & Chunks

Increasingly rose – continued to grow or go up steadily over time.

Reflecting a universal expansion in internet adoption – showing a widespread increase in internet use.

Representing the largest percentage of internet users – having the highest share among all groups.

Used the internet less frequently – accessed or engaged with the internet less often.

Accounted for the all-time-high results – made up the highest figures ever recorded.

Surged to 100% – rapidly increased to the maximum level.

Marking the chart peak proportion – reaching the topmost percentage shown in the graph.

Experienced a sustained growth – showed a steady and continuous increase.

Ended the period at... – finished the time frame with a specific percentage.

Converging with that of the former – becoming equal or similar to the earlier group's result.

Fluctuated over the first years – varied up and down during the early part of the period.

Significantly jumped to 50% – sharply increased to half of the total proportion.

Lagged far behind in terms of... – was much lower or slower compared with others.

Registering the least marked result – recording the smallest or least noticeable figure.

Barely exceeded one-fifth of the total – only just went over 20% of all cases.

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Some people believe that watching TV is bad for children, while others claim it has positive effects for children as they grow up.

Discuss both views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

One activity children revel in their leisure time is non other than watching TV, and this is considered to have a negative impact on their mental abilities and behaviour; meanwhile, there are those who tend to think that if exposed to educational content, it is rather possible to take advantage of it. Plus, it also brings a chance for parents to engage in household chores while children's attention is diverted to TV. Thus, I side with the latter view.

Granted, watching TV can pose several threats to children, where one potential drawback is the mental toll it displays. Excessive viewing TV programs can cut short the time they could spend on education and sports, worsening their learning progress and school performance. The behaviour of children, moreover, can be impacted unfavorably. Before being exposed to the world, children who frequently watch TV programs, might adopt reversed opinions about it, which is why they tend to think that the world is a frightening place and loose willingness to spend time outdoors, which may lead to self-isolation later in the adulthood. This is because of the violence portrayed on television, and children who have seen significant amount of violence on TV are more likely to develop aforementioned perspective about the world.

There are, on the other hand, those who assume that TV has to do with more advantageous effects to both children and parents. First of all, TV content does not always cover entertaining programs or shows, whereas some channels air educational programs, like those on National Geographic channel animal and environment related documentaries, it is possible attributable to technological progress to watch YouTube or other video viewing platforms on TV: children can access to educational content on these platforms and learn new skills and knowledge. Therefore, parents now

encourage active learning to their children via watching foreign movies or programs while they accompany them and answer their questions, so they can learn independently these languages, for instance.

Furthermore, television has become also the silent babysitter. In modern households, TV often does more than just educating or entertaining children - it provides parents with something increasingly scarce; time. While children are busy with watching their lovely TV programs or cartoons, parents can take this opportunity to allocate time for domestic tasks or self care; cooking, cleaning, doing the laundry, completing work or simply catching their breath. This mostly comes beneficial to dual-income families - when both parents work and find little time on household duties.

From my perspective, although TV viewing can be reckoned a negative trend, I feel that it is hard to neglect perks it confers. TV often does a great job educating children in an engaging way, and parents, in turn, gain from this arrangement, an opportunity that allows them to rationalize time efficiently as well as unwind and restore their energy. However, it is always important to maintain supervision over their screen time to prevent excessive viewing and access to sexual or violent content.

In conclusion, it is true that too much screen time can harm children's learning process, and create a sign of violence and isolation, but this does not mean that it is negative as a whole: I believe that watching tv can help children attain new knowledge, and it benefits their parents as well.

547 words.

Useful Vocabulary & Chunks

- * **Revel in their leisure time** – to take great pleasure in relaxing or entertaining activities.
- * **No other than** – used for emphasis to identify something specifically or exclusively.
- * **Have a negative impact on** – to affect something in a harmful or damaging way.
- * **Mental abilities and behaviour** – a person's intellectual skills and patterns of conduct.
- * **Exposed to educational content** – to come into contact with or experience learning material.
- * **Take advantage of it** – to make effective use of something beneficial.
- * **Attention is diverted to...** – when focus or interest is drawn away toward something else.
- * **Engage in household chores** – to take part in or perform home duties such as cleaning or cooking.
- * **Pose several threats to...** – to present or create possible risks or dangers.
- * **Mental toll** – emotional or psychological strain or burden.
- * **Cut short the time** – to reduce the amount of time available for something.
- * **Worsening their learning progress** – making their educational development poorer.
- * **Impacted unfavorably** – negatively influenced or affected.
- * **Adopt reversed opinions about...** – to form misguided or opposite beliefs regarding something.
- * **Violence portrayed on television** – scenes of aggression shown on TV programs.
- * **Develop aforementioned perspective** – to form the viewpoint previously mentioned.
- * **Assume that... has to do with more advantageous effects** – to believe something results in more positive outcomes.
- * **Access to educational content** – the ability to reach and learn from informative material.
- * **Encourage active learning** – to promote hands-on, engaging learning experiences.
- * **Silent babysitter** – metaphor for TV acting as a quiet caretaker keeping children occupied.
- * **Allocate time for domestic tasks** – to set aside time for household responsibilities.
- * **Dual-income families** – households in which both parents are employed.
- * **Rationalize time efficiently** – to manage or organize time wisely and productively.
- * **Unwind and restore their energy** – to relax and recover from fatigue or stress.
- * **Attain new knowledge** – to acquire or gain new information or understanding.

Test 5

Writing task 1

You should spend about 20 minutes on this task.

The table below provides data on the number of temporary migrant workers in four countries for 2003 and 2006, along with the number of such workers per 1,000 people in 2006.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Temporary migrant workers (2003 and 2006)

Country	2003	2006	Per 1,000 people in 2006
Australia	152,000	219,000	10.7
New Zealand	65,000	87,000	21.1
United Kingdom	137,000	266,000	4.4
United States	577,000	678,000	2.3

The report gives information about the volume of temporary migrant workers in countries: Australia, New Zealand, United Kingdom, and United States in the years 2003 and 2006, and the number of such workers per 1 000 people in 2006 in the table.

As can be seen, there was a universal growth in the number of migrant workers on short-term contracts across all countries, where by far the largest rise was seen in United Kingdom. It was United states that hosted the most significant number of migrant workers, whereas New Zealand, albeit being least migrant-friendly country, reported the highest ratio of workers per 1000 inhabitants.

In 2003, there were more migrants working temporarily in United States (577000) than in any other countries, the result of which was still the highest in 2006, at 678 000. United Kingdom was the second country with the most numbers of such workers, rising from 137 000 in 2003 to 266 000 in 2006, while the third country was Australia, which was home to 152 000 workers in 2003 and up to 219 000 the next year, The one that closed the list was New Zealand, where number of workers accounted for 65 000 and followed the suit like other countries, hitting a meager 87 000.

Reporting how many workers there were per 1 000 people in 2006, it is surprising that the most marked result belonged to New Zealand (21.1), even though it displayed the lowest result of migrant workers. 10.4 points lower was Australia, and the figure for United Kingdom was at 4.4 migrants working temporarily per 1000 in 2006. Only 2.3 migrants accounted for per thousand people in United States — the fewest count of migrant employees despite showing a reverse trend in the total.

292 words

Useful vocabulary and chunks of language from this report

temporary migrant workers – people who move to another country for short-term employment.

short-term contracts – work agreements lasting a limited period.

universal growth – increase happening in all categories or places.

by far the largest rise – the biggest increase among all.

hosted the most significant number – had the highest quantity or total.

migrant-friendly country – a nation open to or supportive of foreign workers.

ratio of workers per 1,000 inhabitants – number of workers compared to the total population.

accounted for – represented or made up a specific amount.

followed the suit – behaved in the same way as others.

hit a meager (number) – reached a small or low figure.

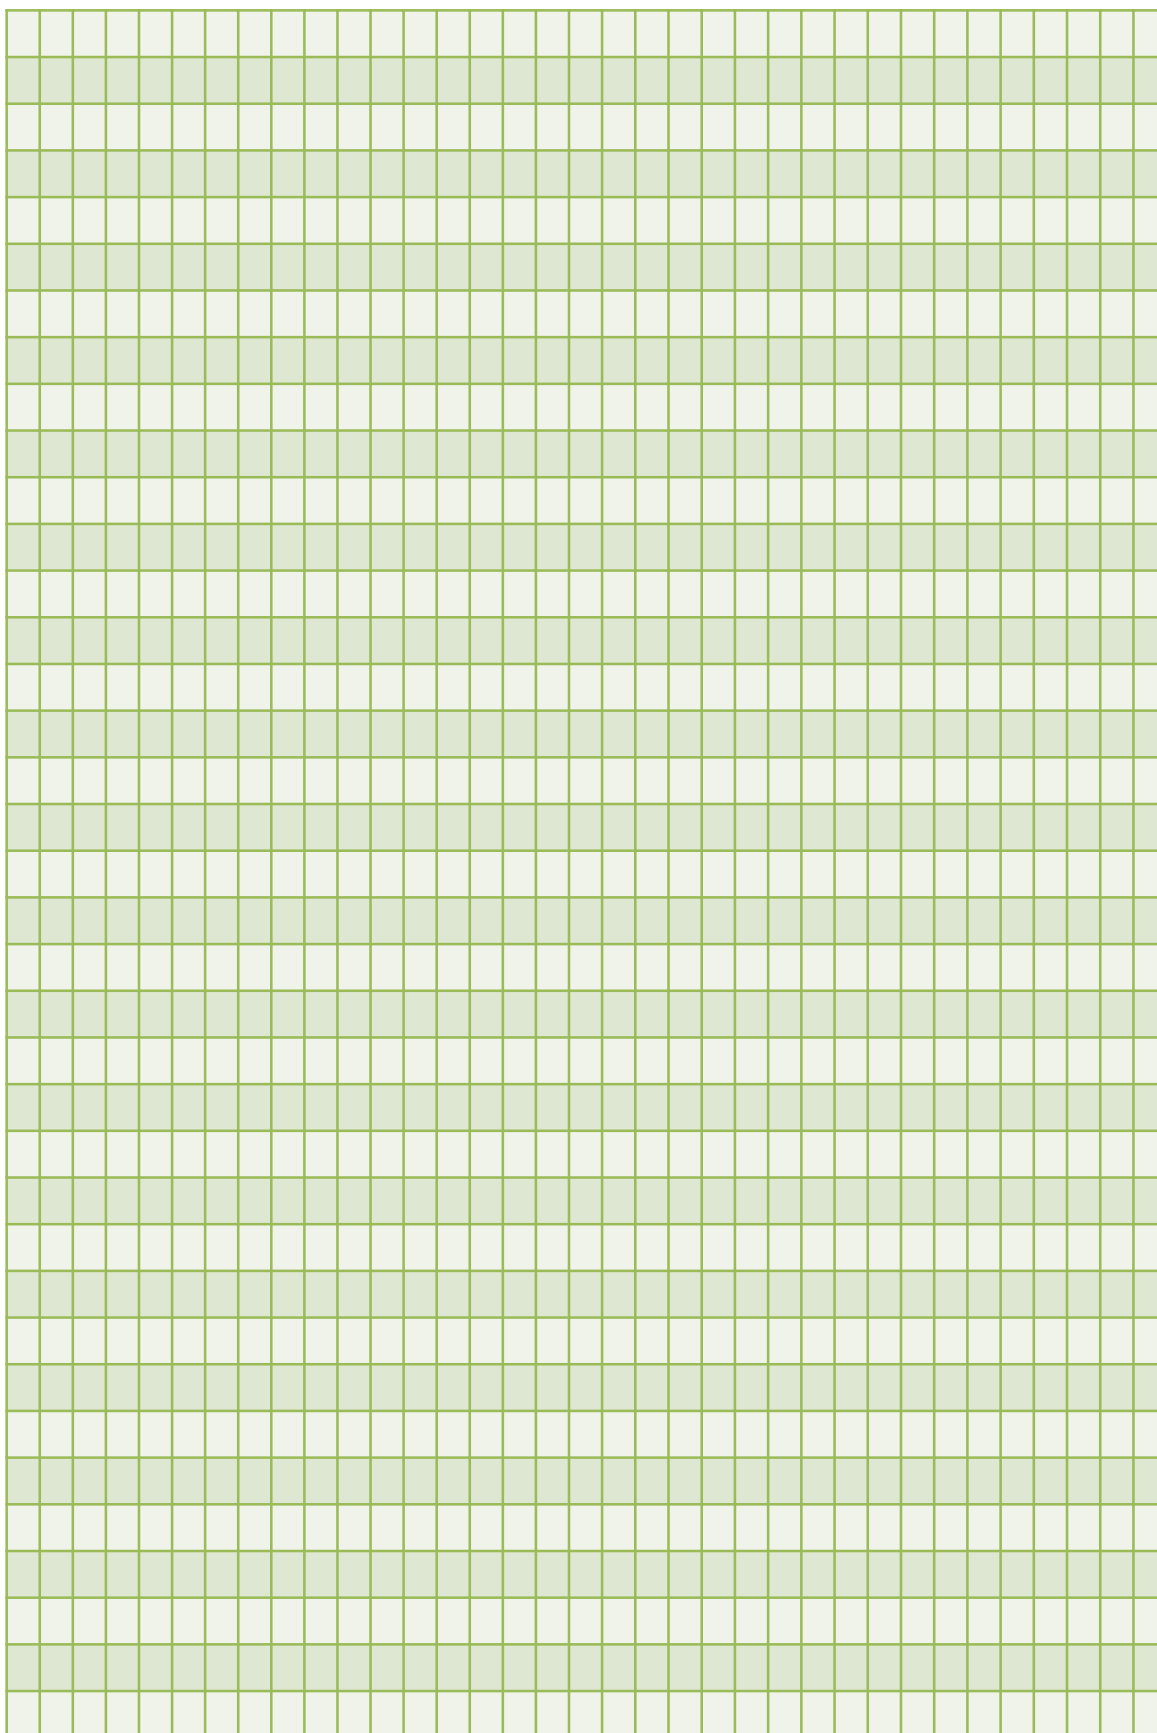

marked result – clear or noticeable outcome.

displayed the lowest result – showed the smallest figure.

points lower – used to compare numerical differences.

reverse trend – opposite direction or pattern in data.

the fewest count – the smallest recorded number.

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Some people think that success in life comes from hard work and determination, while others think that there are more important factors such as money and appearance.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

Hard work and determination are shown to be main drivers of successful life by some individuals, whereas there are also advocates bringing other factors to the table as causes of such life like personal financial condition and appearance. Although the former mentioned traits are of importance to certain professions, they are the real cases to achievements in one's life, and personally I side with this view.

On the one hand, appearance and money can be of importance in certain scenarios of life, especially for those jobs that prioritize these aspects of a person over others. These professions promise a short cut ways to be famous and enjoy lucrative income opportunities, whereas production and entertainment industries tend to be ones seeking for those with exceptionally gorgeous appearance, as it plays a key role in these jobs, relying heavily on visual impression and influencing audience perception. Moreover, money can do the trick in professions like Formula 1, a type of sport is relished worldwide, but only with a huge fortune can get permission to be a F1 driver, as even a single driving license costs millions of dollars, not counting special high-cost training is required before that.

This does not mean, however, all areas of life involve aforementioned personal qualities. With the consistent work and enough time any person is able to achieve intended purposes in life. By working on one skill or an area of skill and subject for a long term, a person can become an expert in those fields, despite many and many trials and errors. If examined, a huge number of the most successful people on the Earth do not come from a big money or good looking appearance, but have they managed to secure their position

over many years studying hard and submerging themselves in their area of speciality. Mark Zuckerberg, CEO of Facebook and Meta, or Jack Ma, a cofounder of Alibaba, are evident examples in this regard, who are accomplished billionaires and professionals in their business areas.

Plus, being dedicated and resilient throughout the process to attain something greater in life is vital. This is mainly because most people just give up their goals as they start to confront challenges in their paths, and in such miserable and hopeless stages of work and life. Single-mindedness to reach one's objectives despite obstacle is an intrinsic quality that defines the true path required to walk towards success.

In conclusion, professions that value personal look and money are usually the ones in media and entertainment, a high promising area, yet success is not always about only these specific individual qualities, while all walks of life require a person to be determined and hard working in spite of challenges ahead.

449 words

Useful language chunks and vocabulary from this essay

main drivers of successful life – the key factors that lead to achieving success

advocates bringing other factors to the table – people proposing additional causes or influences

personal financial condition – one's monetary or economic situation

exceptionally gorgeous appearance – extremely attractive or striking looks

plays a key role – has an important function or influence

relying heavily on visual impression – depending significantly on how someone looks

influencing audience perception – affecting how viewers or the public see someone

short cut ways – quicker or easier methods to achieve something

lucrative income opportunities – jobs or work that offer high financial rewards

relished worldwide – enjoyed or appreciated by people globally

huge fortune – a very large amount of money

submerging themselves in their area of speciality – dedicating oneself fully to a field of expertise

trials and errors – repeated attempts and learning from mistakes

secure their position – achieve and maintain status or success

dedicated and resilient – committed and able to recover from difficulties

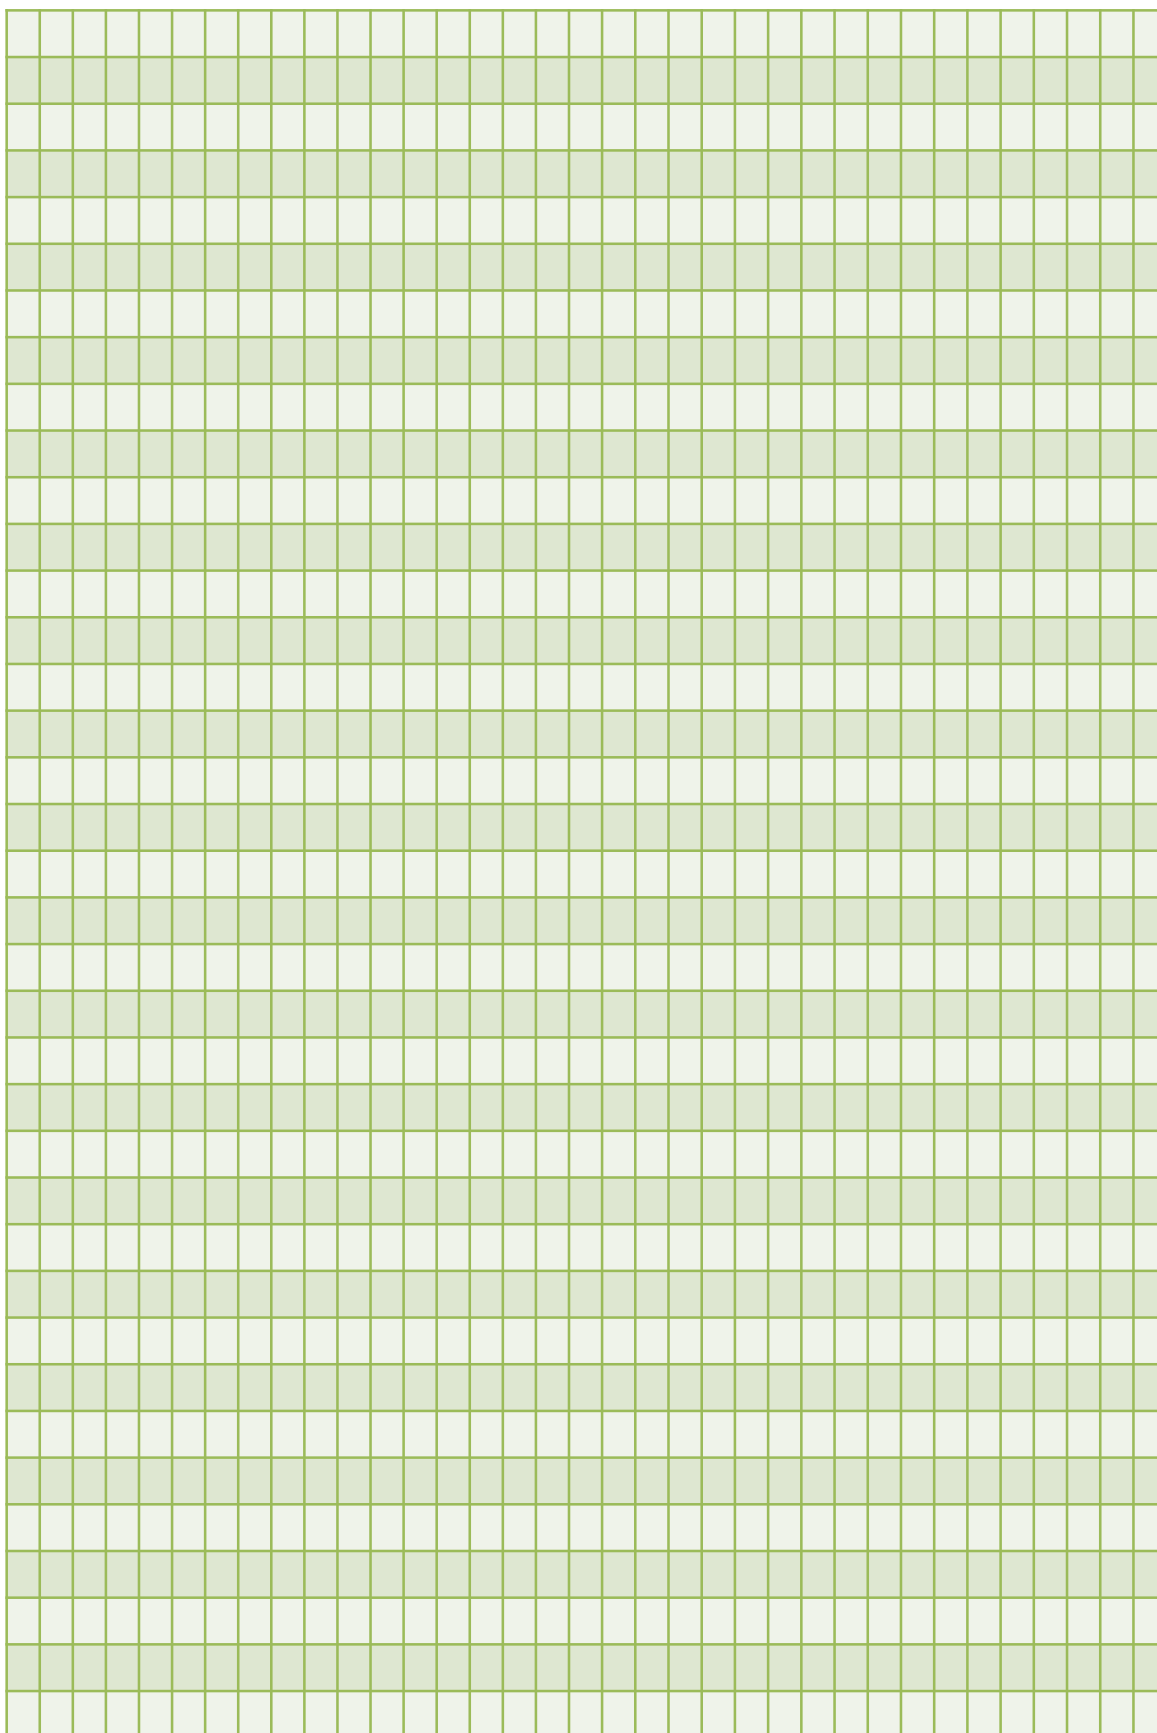

confront challenges – face difficulties or obstacles

single-mindedness to reach one's objectives – focused determination to achieve goals

intrinsic quality – an essential or natural characteristic

all walks of life – all types of people or professions

in spite of challenges ahead – despite difficulties or obstacles in the future

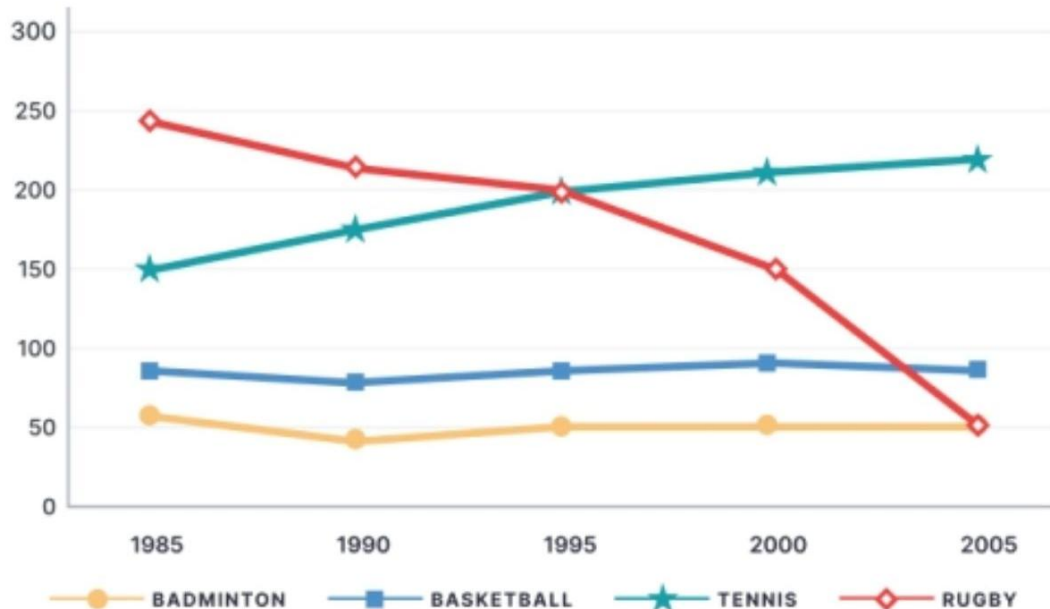

Test 6

Writing task 1

You should spend about 20 minutes on this task.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report outlines information about the volume of 4 sport attendees - badminton, basketball, tennis and rugby - in a certain area from 1985 to 2005 in the line graph. Units are measured in single figures.

In general, the interest rate of those who revelled in rugby revised downwards over the period in the question, albeit initially securing the clinching top spot, whilst the reverse was true for that of tennis. Notably, there was a sustained trajectory in the number of badminton and basketball players throughout that time frame.

In 1985, the most involved type of sport was rugby, starting at 250 attendees, the result of which then dipped radically to 200 in 1995. Meantime, the number of tennis players in that region rose significantly to the same number in 1995, up from 150 in 1985, and it leapfrogged to a high of 225 in 2005, whereas the trend for rugby slashed, hitting a trough of 50 thereafter - the most minimal number of players reported.

Conversely, the ratio of those engaging in basketball and badminton fluctuated over the period, with a 50-attendee gap. The former accounted for an initial of 60 and negligibly leaned towards 50 in 2005, converging with that of rugby in that year, while the latter remained flat at 100 over a course of 20 years. The interest rate of those who relished rugby — creative phrasing showing engagement or enthusiasm in a sport.

238 words.

Vocabulary & Chunks from the Report

revised downwards — formal, statistical expression for “declined.”

clinching top spot — idiomatic and dynamic phrase meaning “ranked first.”

rose significantly to the same number — precise structure for describing comparison and growth.

up from 150 in 1985 — common academic phrasing for numerical contrast.

albeit initially securing the clinching top spot — refined concessive structure for contrast.

the reverse was true for... — elegant phrase to highlight opposite trends.

sustained trajectory — advanced phrase for describing steady change.

throughout that time frame — formal phrase meaning “during that period.”

dipped radically — vivid way to express sharp decline.

leapfrogged to a high of... — strong visual verb meaning “surpassed quickly.”

hitting a trough of... — idiomatic way to indicate the lowest point.

fluctuated over the period — standard and academic phrase for irregular change.

negligibly leaned towards — sophisticated wording for a slight movement or change.

remained flat at... — concise phrase to indicate stability or no change.

to lean towards - to (cause to) slope in one direction, or to move the top part of the body in a particular direction:

to converge with - If lines, roads, or paths converge, they move towards the same point where they join or meet:

[illegible]

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Some people think that children should be taught at school to recycle materials and avoid waste. Other people believe that children should be taught this at home.

Discuss both these views and give your own opinion.

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

Arguments over who should be in charge in educating young generation to recycle and avoid waste raises concerns among many. While there are advocates towards the responsibility of schools, there are also for parents' role. Personally, considering time spent and influence of schools, parents can do a little.

Admittedly, parents are the initial teachers of their offspring. Children acquire almost any skill from their parents ranging from eating, walking to oral ones, while they also develop a sense of

respect and perspective, where they see their parents as role models in their life, and thus parents can impact on their children's choices and decisions. Taking this into account, raising environmental awareness among children can be of no difficulty for parents; meantime, school systems can focus on conferring vital knowledge about fundamental subjects and teaching skills like teamwork, decision-making, critical thinking and communication ones. Schools conventionally are the places to teach aforementioned abilities, not where a child is prepared to take care of nature instead of spending valuable time and resources on preparation for future career and life.

Nonetheless, I side with supporters of the latter view, as parents cannot influence as efficiently as schools. In these institutions, young generation tends to spend more time than they do at home: they engage in studying the surrounding world, playing games, teamwork activities and connecting with their peers till the afternoon, whilst the time spent at home is considerably lower if it is compared. Since children are usually exposed to peer pressure — influence exerted by people of one's age or social group to conform to group norms — seeing their friends take small steps to

protect the environment can motivate them to follow suit. Moreover, not every household is environmentally conscious at a degree to teach their family members the same; as a result, a pedagogical effort to foster a sustainable awareness campaign at schools is far favorable.

In conclusion, parental responsibility to promote environmental preservation steps is a flawed idea, as they lack enough control and resources as educational places do. Hence, the stress on this should be given to schools for above mentioned reasons.

(353 words)

Academic & Collocationally Strong Chunks from the essay.

raises concerns among many

→ perfect for introducing contentious topics.

advocates towards the responsibility of...

→ useful for discussing differing responsibilities or viewpoints.

considering time spent and influence of...

→ analytical connector; useful for justification.

initial teachers of their offspring

→ formal, elegant phrasing for parents' role.

develop a sense of respect and perspective

→ natural and refined description of moral formation.

see their parents as role models

→ idiomatic and realistic for education/family essays.

impact on their children's choices and decisions

→ accurate verb–noun collocation.

raising environmental awareness among children

→ widely applicable to education and environment topics.

focus on conferring vital knowledge

→ sophisticated alternative to “focus on teaching.”

fundamental subjects and teaching skills like teamwork, decision-making, critical thinking and communication

→ excellent lexical bundle for education themes.

conventionally are the places to teach aforementioned abilities

→ formal and well-referenced expression.

spending valuable time and resources on preparation for future career and life

→ smooth, advanced collocation set.

side with supporters of the latter view

→ academic way to show one's position.

young generation tends to spend more time than they do at home

→ strong comparative phrase.

exposed to peer pressure — the influence exerted by people of one's age group to conform to norms

→ **advanced embedded definition structure.**

take small steps to protect the environment

→ idiomatic environmental collocation.

to follow suit

→ elegant idiom for “to do the same as others.”

a pedagogical effort to foster a sustainable awareness campaign

→ very high-level; merges education + sustainability lexicon.

parental responsibility to promote environmental preservation steps is a flawed idea

→ complex, evaluative phrasing.

lack enough control and resources as educational places do

→ formal and comparative expression.

the stress on this should be given to schools

→ natural academic phrasing for conclusions.

[illegible]

Test 7

Writing task 1

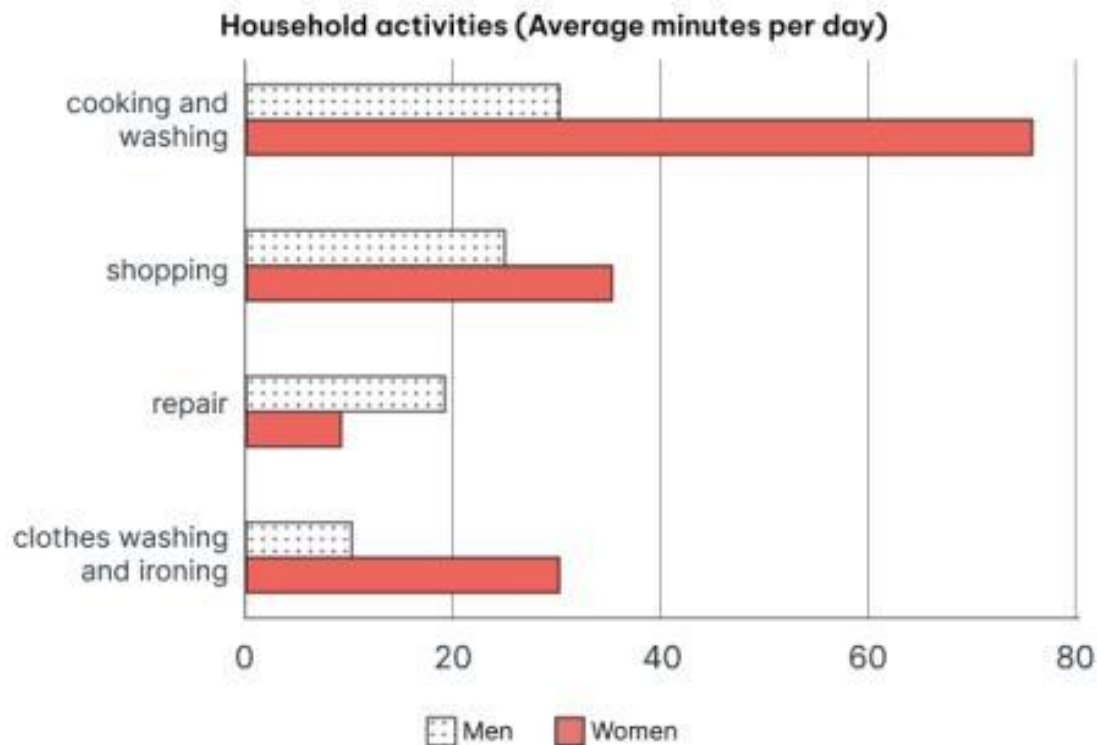

You should spend about 20 minutes on this task.

The charts below show the comparison of time spent, in minutes per day, by UK's males and females on household and leisure activities in 2008.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Leisure activities (Average minutes per day)	Men	Women
TV, video, radio	137	118
Reading	18	19
Sport	15	11

The report outlines data regarding men's and women's time allocation on household activities in the bar chart- cooking and washing, shopping, repair, clothes washing and ironing- and leisure activities in the table - TV, radio, video watching, reading, and doing sports - in the UK in the year of 2008. Units are measured in minutes per day.

As can be seen, the most routinely relished activity was watching or listening to radio, tv and videos for both sexes, whereas men took the lead in sports, a past time in which a minority of UK citizens engaged as a whole. As for household activities. women emerged almost as the main doers, with cooking and washing the minutes spent being the most marked, albeit men doing repair job more than women.

Reporting the figures concerning leisure activities, apart from the index of Tv, radio and video, the time spent on the two was accountable for less than 20 minutes by both genders, while on the former both women and men devoted more around 2 hours weekly, with respective figures of 137 and 118. The figure for reading was sustained at 18 minutes in men, and a point higher in women. The one closing the list was the amount of involvement in sports, with men marking 15 minutes, four minutes higher than women.

Household activities tend to be done significantly by women, they devoted nearly 80 minutes on cooking and washing compared to men, who did so only at 30 minutes, The time spent on shopping came as a close second, with women putting at about 40 minutes per week and men 25 minutes. The gap was highly pronounced in doing clothes washing and ironing: women allocated 30 minutes and men a meager 10 minutes.

In comparison, the only area men dominated was repairing, accounting for nearly 20 minutes (still lower than figures women exhibited in other activities). the result of women made up 20 minutes therein.

(321 words)

Advanced & Useful Chunks

The report outlines data regarding...

→ A precise, formal way to open any Task 1 introduction.

Time allocation on household and leisure activities

→ Compact and academic phrasing for describing categories.

The most routinely relished activity was...

→ Vivid but formal; shows variation beyond “most popular.”

Men took the lead in...

→ Strong comparative expression for dominance.

Women emerged as the main household doers...

→ High-level structure (“emerged as”) for emphasis.

Albeit men engaging in repair work more than women

→ Sophisticated contrast connector (“albeit”).

With the exception of...

→ Excellent for highlighting exceptions in data trends.

The figure for... was sustained at...

→ More academic alternative to “remained at.”

The only area men dominated was...

→ Compact evaluative comparison phrase.

The gap was highly pronounced between...

→ Advanced adjective (“pronounced”) for clear contrasts.

Came as a close second

→ Natural, idiomatic expression for ranking.

Devoted nearly X minutes on...

→ Formal and precise; replace “spent” for lexical range.

Accounted for less than X minutes per day

→ Strong quantitative phrasing for proportion/time.

A meager amount of time was allocated to...

→ Elegant way to describe very small values.

Household activities tended to be done significantly more by...

→ Complex structure combining trend and comparison.

[illegible]

Task 2

You should spend about 40 minutes on this task

Write about the following topic:

Many people around the world use social media everyday to keep in touch with other people and get news events.

Do you think the advantages outweigh the disadvantages?

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

The pivotal role of social media in our lives makes it difficult to avoid using it, where it aims to provide connections and information. Although there are concerns over its potential downsides such as a problematic attachment, I would firmly assert that social media speaks to mainly advantageous side for the majority of users, mitigating obstacles regarding communication and opportunities for improved networking relationships.

It is indisputable that one of the most pronounced negatives of social media is a trend what is known as FOMO - fear of missing out. This usually results in negative implications on mental health. When a user is not online on social media pages, it seems to them that they may miss an important event or news, and continuous need to be present on the internet occurs. It is harmful since continuum of this situation may exert a reduction in cognitive functioning, academic performance, focus, and physical well-being.

Having said that, I reckon that social media offers significant benefits across various fronts, one of which has to do with fostering connections. With the help of social media apps and websites, thousands of people are able to stay in touch with loved ones and reconnect with old friends, yet this is not the end of it, where rather it also facilitates an opportunity to share media, photos and videos, and to build a new rapport based on mutual interests, expanding social circles. There are already various cases in which strangers have become life partners and close friends via social media pages, for instance.

Another lofty benefits is the possibility to build networking relationship. Social media is not the only communication spot for individuals, but also a chance for professionals and business to look for potential customers or business partners. This means now with the help of it it is much straightforward to find new updates, breaking events and news, employees (who excel in their careers), employers, organisations that can do the work at an international level, lessening problems like logistics and orders. Such opportunities are usually presented in Twitter and Facebook, where all experienced business people get together to exchange insights.

In conclusion, despite a few potential drawbacks social media puts forward, the ability to stay connected with loved ones and conferring a growth area for business proves invaluable for many users. Thus, I suggest that with responsible use and a critical eye, we can maximize the output of social media while minimizing its negative impacts.

(412 words)

Useful Vocabulary & Language Chunks from Essay on Social Media

Introduction & Thesis Phrases

the pivotal role of ... → the central or most important role
e.g. The pivotal role of education in shaping society cannot be denied.

makes it difficult to avoid using... → shows how something has become essential

aims to provide connections and information → formal way to express purpose

potential downsides → drawbacks or disadvantages

problematic attachment → emotional or psychological over-dependence

speaks to the advantageous side of... → highlights the benefits of something

mitigating obstacles regarding... → reducing problems related to

Discussing Disadvantages

one of the most pronounced negatives → one of the most serious drawbacks

a trend known as FOMO (fear of missing out) → use this when introducing modern social phenomena

negative implications on mental health → formal and academic expression

continuous need to be present online → describing addiction-like behavior

continuum of this situation may exert a reduction in... → advanced way to say "this ongoing situation may reduce..."

cognitive functioning, academic performance, focus, and physical well-being → high-value academic vocabulary set

Discussing Advantages

offers significant benefits across various fronts → sophisticated opener for advantages paragraph

fostering connections → formal alternative to “helping people connect”

with the help of social media apps and websites → natural linking phrase

to stay in touch with loved ones / reconnect with old friends → natural collocations

this is not the end of it, where rather it also facilitates... → linking structure for extending ideas

facilitates an opportunity to... → academic verb + noun structure

build rapport based on mutual interests → excellent for speaking about relationships or teamwork

expanding social circles → idiomatic and natural

cases in which strangers have become life partners via social media → precise example phrasing

Professional & Networking Context

build networking relationships → formal collocation

a chance for professionals and businesses to look for potential customers or partners → high-band idea expression

find new updates, breaking events and news → good for describing access to information

employees who excel in their careers → strong vocabulary for describing skilled workers

organisations that can do the work at an international level → professional tone

lessening problems like logistics and orders → formal use of “lessening”

exchange insights → excellent collocation for discussions or collaboration

Conclusion & Evaluation Phrases

despite a few potential drawbacks → concessive phrase for balanced argument

puts forward → formal synonym for “presents” or “offers”

conferring a growth area for business → sophisticated structure (“conferring” = granting or providing)

proves invaluable for many users → idiomatic and formal

with responsible use and a critical eye → moral/ethical conclusion phrase

maximize the output... while minimizing negative impacts → neat parallel structure, ideal for conclusion

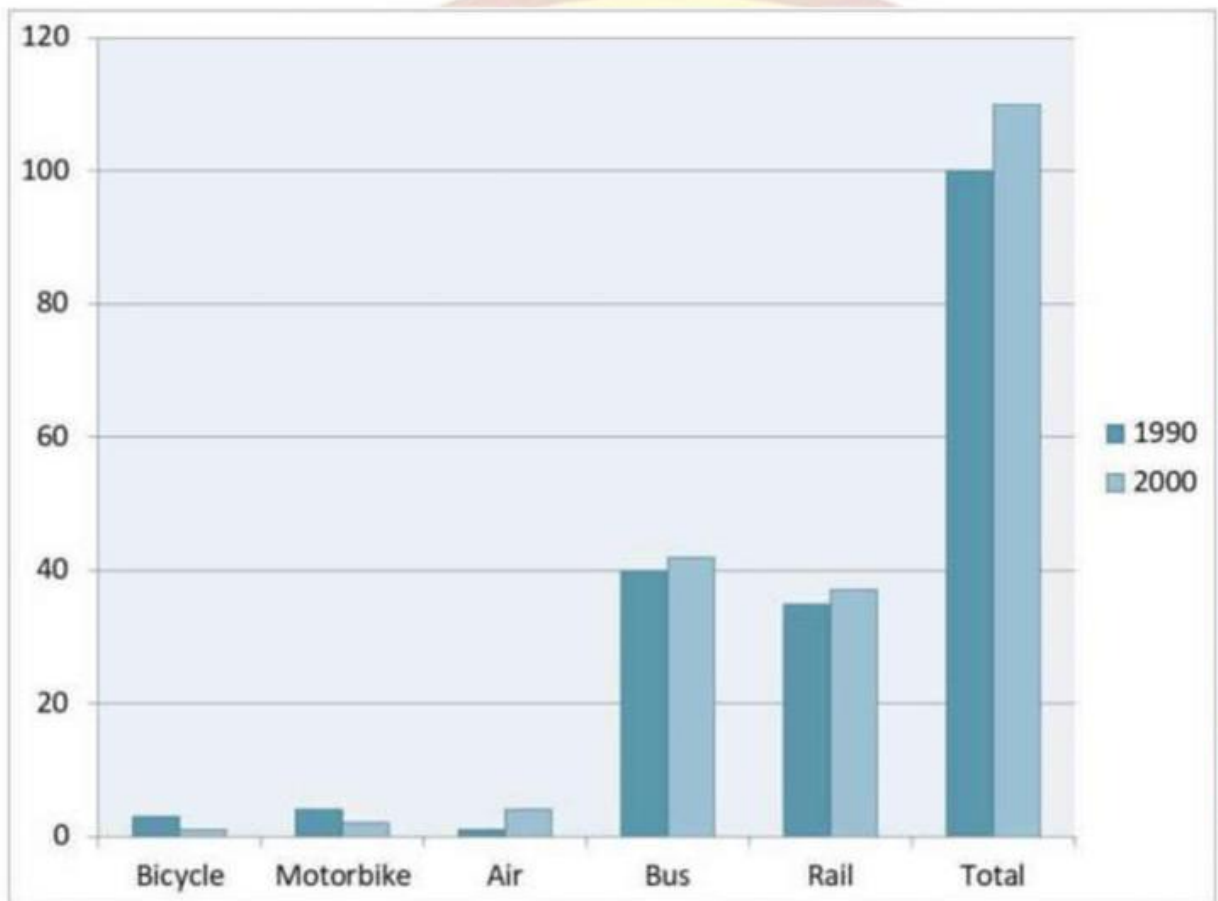

FOMO (the fear of missing out something) - a situation where a person tries to be updated all the time and exposed to constant use of social media in simple terms.

[illegible]

Test 8

Writing Task 1

The chart below shows the total distance travelled by passengers on five types of transport in the UK between 1990 and 2000.

The report focuses on the information about the length of commute on diverse means of transport -bicycle, motorbike, air, bus, rail- and as a whole in the UK at intervals of 1990 and 2000 in the bar chart. Units are in kilometers.

Generally speaking, the majority of commuters favored public transit, namely bus and rail, whereas the opposite was true for bicycles and motorbikes - private transportation. Interestingly, the figure for air commuting, albeit being public transit, was also less marked compared to other modes of travel. Plus, the total figure for traveled distance rose at a moderate rate over the years in the question, with that of bus, rail, and air marking the same trajectory. The exceptions in this regard were motorbikes and bicycle.

Focusing on by far the most popular means of transport, most people chose bus, with its figure accounting for 40 in 1990 and 45 in 2000. The distance ratio on rail came as the second with the upward trend over the years, rising from 30 to 35.

The distance milage was much less pronounced for other transport means, where that of air exhibited a growth from a meager 2 to 5 from 1990 to 2000 contrary to what the result of motorbike and bicycle showed - the decline in public preference during the period. The former halved drastically from 7 to 3, while the latter mirrored the movement down to 2, up from 6.

In total, distance covered by all transportation means constituted a remarkable 100 in 1990, the figure for which then rose to a high of 110 in 2000 in the UK.

(269 words)

Useful Chunks & Expressions

focuses on the information about...

→ Used to describe what the chart or report is about.

The report focuses on the information about the length of commute...

diverse means of transport

→ A formal alternative to “different types of transport.”

as a whole

→ Means “in general” or “overall.” Great for overviews.

avored public transit

→ Formal way of saying “preferred to use public transport.”

the opposite was true for...

→ Excellent for contrast statements in Task 1.

albeit being public transit

→ High-level linking phrase meaning “although it is.”

less marked compared to...

→ Academic alternative to “smaller than” or “not as noticeable as.”

rose at a moderate rate

→ Neutral and natural way to describe steady growth.

marking the same trajectory

→ Advanced phrase for “showing a similar trend.”

the exception in this regard was...

→ Polished way to introduce contrast or outliers.

by far the most popular means of transport

→ Excellent intensifier for comparisons.

came as the second with an upward trend

→ Useful chunk for describing rank and movement.

was much less pronounced for...

→ Sophisticated way to describe weaker figures.

a meager 2 to 5

→ Adds tone and nuance to small quantities (use “meager” instead of “small”).

constituted a remarkable 100

→ Strong academic phrasing for describing proportions or totals

[illegible]

Task 2

You should spend about 40 minutes on this task

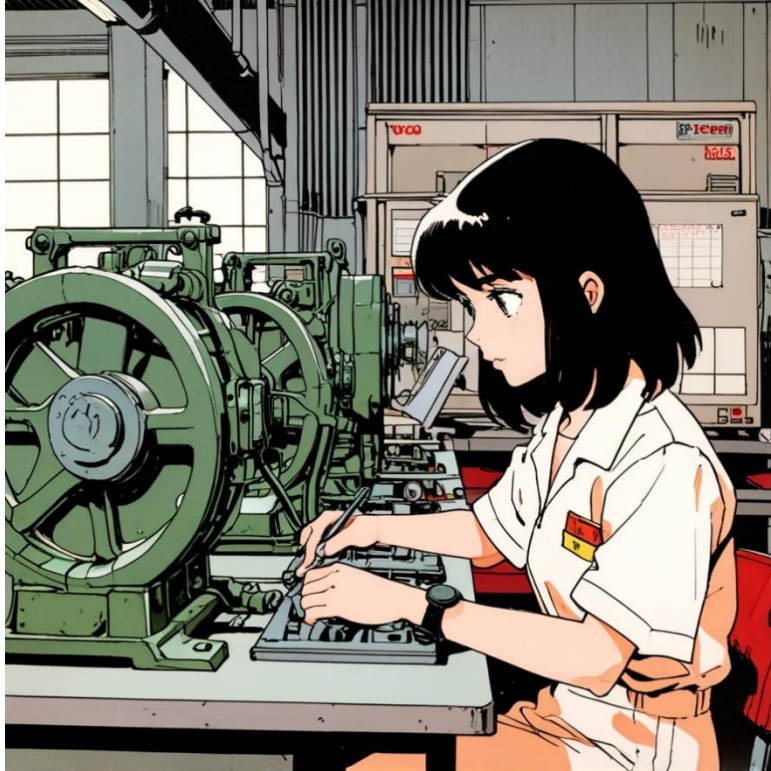

Write about the following topic:

It is important for a government to spend money on vocational training and practical programs (e.g. fixing cars, hairdressing) than on education in universities.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own experience or knowledge.

Write at least 250 words

There is a view that investing on vocational education and practical programs plays a vital role, where it is of no importance to spend on university curriculums. Personally, I actually support this idea, as such initiative can prepare professional employees who do not only excel in their field, but do aid financially to companies.

First of all, these educational programs conferred at universities can aim to prepare individuals for successful career path. This competitive job market and the advent of technologies have made it difficult than

ever before for new job applicants to be adequate employees suited to the position, where high criteria for their skills is mostly appreciated. Students, while delving into the depth of their courses, are able to be already equipped with employable resume and essential skills like communication, leadership, critical-thinking, decision making and to name just a few long before they even graduate, ensuring that the obstacle to meet required criteria in work settings would be mitigated in advance. This struggle of finding a job is oftentimes what most of the new generation fails to do with.

Furthermore, there is financial consideration of this education as well. Companies not sometimes but frequently feel frustrated as newly graduated workers lack most intrinsic set of skills needed for the workplace, something which is not usually taught at university curriculum. As a result of which, these businesses find themselves educating them, and thus losing money and time on this training, which sometimes may last for months or a year in the worst scenario. This would greatly reduce the chances for a business to progress, while graduates realize they have not mastered the fundamentals. Once such programs are sustained in educational institutions, it

can open doors for a business to compete with market behemoths at regional and international levels, securing their position in the market with experienced employees.

In conclusion, such unconventional education at universities can ensure the well-trained workforce for companies, doing away struggles associated in individuals experience and with businesses.

(332 words)

Useful vocabulary and chunks

Investing in vocational education – allocating resources to job-focused training that teaches practical skills.

Practical programs – courses emphasizing hands-on experience over theory.

Prepare professional employees – train individuals to work effectively in professional environments.

Excel in their field – perform exceptionally well in a particular area of expertise.

Aid financially to companies – provide financial benefit or cost savings to businesses.

Successful career path – a progressive and rewarding professional journey.

Competitive job market – employment environment with high competition for limited positions.

The advent of technologies – the arrival or development of new technological innovations.

Adequate employees suited to the position – workers who have the right skills and qualities for a specific job.

High criteria for skills – strict or demanding standards for required abilities.

Employable résumé – a well-prepared CV that increases chances of getting hired.

Essential skills like communication, leadership, critical thinking, decision-making – key abilities necessary for effective work and problem-solving.

Mitigate obstacles in advance – reduce or prevent potential difficulties before they occur.

Struggle of finding a job – difficulty or hardship in obtaining employment.

Financial consideration of education – evaluation of the costs and benefits of pursuing studies.

Lack of intrinsic skills – absence of natural or fundamental abilities needed for work.

Losing money and time on training – wasting resources due to ineffective or unnecessary training.

Open doors for a business to compete – create opportunities for a company to enter or succeed in the market.

Market behemoths – extremely large and dominant companies in an industry.

Well-trained workforce – employees who are properly educated and skilled for their jobs.

[illegible]

Test 9

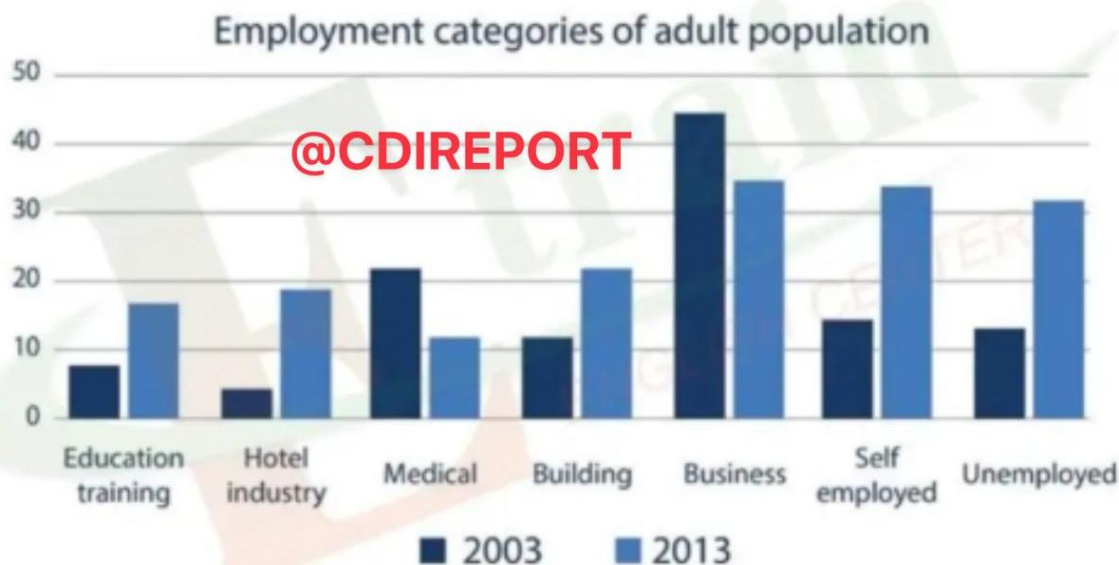

Writing task 1

You should spend about 20 minutes on this task.

The bar chart provides information about seven categories of employment among adults in 2003 and 2013.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report focuses on data regarding the percentage terms of those working in diverse occupations over a decade (2003-2013) in the bar chart. Provided types of occupations are business, medical, hotel industry, education training, self employed, building as well as those who were unemployed.

In general, the front runner type of profession was owning a business over the period, where the figures for self-employed and unemployed adults stood almost at identical proportions. In stark contrast, the involvement in medical jobs emerged as the last runner therein. Interestingly, with the exception of business and medical, the proportions of all brackets revised downwards.

Reporting the most pronounced percentage terms in the chart, it is evident that the index of business hosted a clinching top result with 45% in 2003, which then dipped moderately to 35% in 2013. Despite commencing at around 10%, the amount of those engaged in self employment and those who were not employed at all soared significantly, matching the proportions of the former category at approximately 45%.

The trajectory for education training, hotel industry, and building was also upwards and hovered around from 10% to 20%, with building exhibiting higher percentages (from 10% to 25% from 2003 to 2013).

Those employed in education training and hotel industry constituted nearly 20% of total workforce in 2013, up from 8% and a meager 5% in 2003 respectively.

Employees working in medicine showed a relatively remarkable decline from 2003 to 2013; initially marking 20% it halved to a trough of 10% at a radical rate.

(253 words)

Vocabulary for Describing Data

Percentage terms – words or phrases used to describe proportions or ratios in data.

Over a decade – a period of ten years.

Front runner type of profession – the occupation with the highest or leading percentage.

Stood almost at identical proportions – had nearly the same numerical values.

In stark contrast – showing a clear and strong difference between two figures or trends.

The last runner – the category with the lowest value or position.

Revised downwards – decreased or dropped in value or percentage.

Most pronounced percentage terms – the most noticeable or dominant figures in the data.

Clinching top result – achieving the highest figure or leading position.

Dipped moderately – declined slightly but not sharply.

Soared significantly – increased dramatically or to a large extent.

Hovered around – remained close to a certain figure with little change.

Exhibiting higher percentages – showing larger proportions compared to others.

Constituted nearly [X]% of total workforce – made up almost [X]% of the entire group of employees.

A meager [X]% – an extremely small or low percentage.

Remarkable decline – a noticeable or substantial decrease.

Halved to a trough of [X]% – reduced by half, reaching its lowest point of [X]%.

At a radical rate – at a very fast or extreme pace.

Reporting/Overview Chunks

The report focuses on data regarding... – introduces the subject and scope of the data.

In general, the front runner... – starts a general overview highlighting the leading category.

In stark contrast, the involvement in... emerged as... – introduces an opposing trend or category.

Interestingly, with the exception of... – highlights an exception or special case in the data.

It is evident that... – expresses a clear conclusion drawn from the data.

Despite commencing at around [X]%, the amount of... – describes how a trend started before changing.

The trajectory for... was upwards/downwards – explains the direction of change over time.

Employees working in [field] showed a relatively remarkable... – reports a notable change or figure for a specific category.

Synonyms for Movement/Trend

Dipped – fell or dropped slightly.

Soared – rose sharply or dramatically.

Hovered – stayed roughly at the same level or fluctuated slightly.

Exhibited – showed or displayed a particular pattern.

Constituted – made up or formed part of a total.

Halved – decreased by 50%.

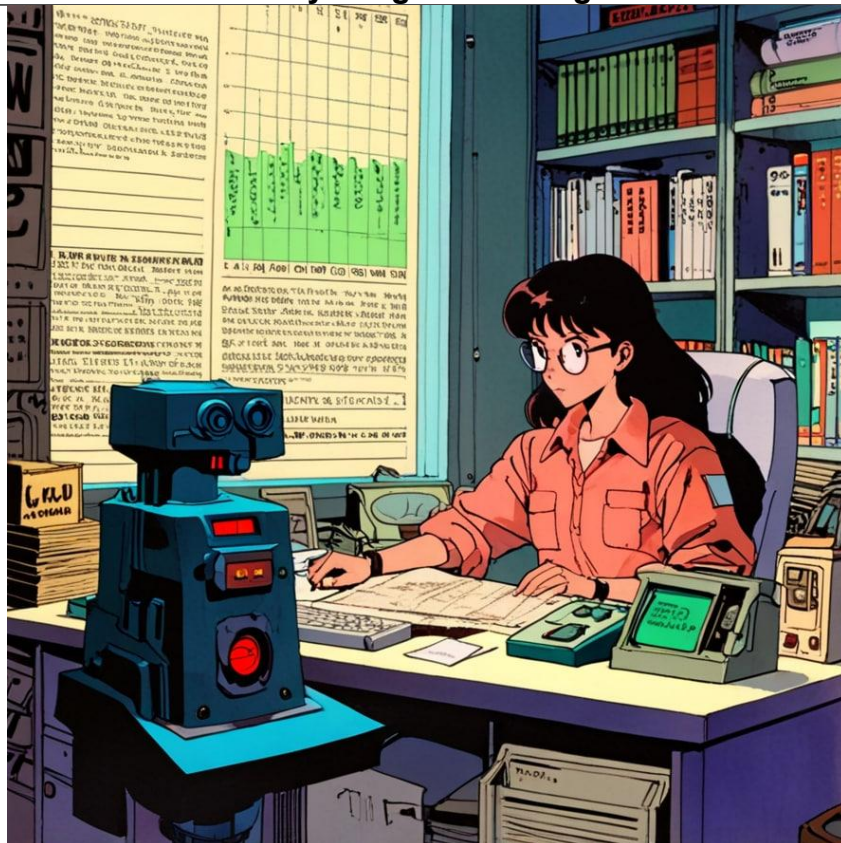

Revised downwards – reduced or declined in value.

[illegible]

Writing Task 2

Some people think that a lot of scientific research is a waste of money and time.

To some extent do you agree or disagree ?

The wise allocation of public and government funding is one of the most challenging decisions to make for any country, and it is claimed that finance and period devoted to movements towards making a progress in science is widely perceived as inadequate. I do admit that already having a number of issues to solve in the community such as poverty and pollution is a vital area to mitigate, yet I consider this trend of intrinsic importance, as everything is thanks to discoveries in science.

I partly acknowledge that it would be rather justifiable if money spent on scientific research would be channeled to iron out other issues in the society, where the first consideration is poverty ratio raising across the globe with ever increasing inflation and economy. Due to recent detrimental international conflicts such as wars on the western-east coasts and Covid 19 back in 2019 and 2020, many countries are still stumbling across several obstacle in the recovery steps. Instead of working scientific advancements, it can be of use to allocate that money and efforts on solving this aforementioned problem, which could make an actual difference.

Plus, diverse kinds of pollution has covered the settings in many countries, raising an increasing concern whether all funding should be targeted at this. This is mainly because different chronic diseases and poor living conditions are worsening the quality of life in these countries, and it may be a cunning initiative to aim government funding in this, to enhance living conditions and fulfill concern by common people. India is an evident instance in this regard: despite the challenges of volatile socio-environmental conditions and sometimes harmful environment, especially for the younger generation, it continues to display significant scientific progress that demands considerable financial resources, a paradox which shows that investing in science cannot do with alone.

Having said that, I assume that investments in science speak to mostly advantageous sides, where one of its advantages is the probability to invent life-enhancing tools. GPS and WIFI technologies are direct results of researches done to explore the space, which are then put into use in everyday life. These technologies serve as a main back bone in many areas ranging from medicine to economics. Therefore, many technologies we consider routine were result of discoveries that were not directly aimed at commercial use.

Furthermore, scientific discoveries oftentimes serve as seeds for broader improvements in the society, and its economic impact is large. Nations that invest in science often reap huge benefits across many sectors, while new industries emerge, and old ones are transformed. The result of which is a chance to create more jobs, thus aiding in solving a common issue - the unemployment ratio as well as poverty.

In conclusion, although existing problems make it neglect investing in scientific discoveries, I feel that this investment is far favorable considering not directly but eventually having its influence on economy and daily life quality.

(485 words)

Useful vocabulary and chunks of language

Wise allocation of public and government funding – the careful and effective distribution of money by authorities for public benefit.

Widely perceived as inadequate – generally considered or viewed as insufficient.

Intrinsic importance – inherent or natural value within something itself.

Discoveries in science – new findings or breakthroughs achieved through scientific research.

Channeled to address pressing challenges – directed or used to solve urgent problems.

Escalating poverty levels – rapidly increasing rates of poverty.

Ever-increasing inflation – continuously rising prices and living costs.

Detrimental international conflicts – harmful or damaging disputes between nations.

Stumbling across obstacles in recovery – encountering difficulties during a process of improvement or restoration.

Aforementioned problem – the issue that has been mentioned earlier in discussion or writing.

Multifaceted forms of pollution – various and complex types of environmental contamination.

Chronic diseases and poor living conditions – long-term illnesses combined with low-quality or unhealthy lifestyles.

Volatile socio-environmental conditions – unstable social and environmental situations that change unpredictably.

Considerable financial resources – a large or significant amount of money available for use.

A paradox which shows... – a seemingly contradictory situation that reveals a deeper truth or insight.

Investments in science speak to advantageous sides – funding science reflects beneficial or positive outcomes.

Life-enhancing tools – technologies or innovations that improve quality of life.

Serve as the backbone in many areas – act as the main support or foundation for multiple sectors.

Scientific discoveries as seeds for broader improvements – research breakthroughs that initiate widespread progress or development.

Test 10

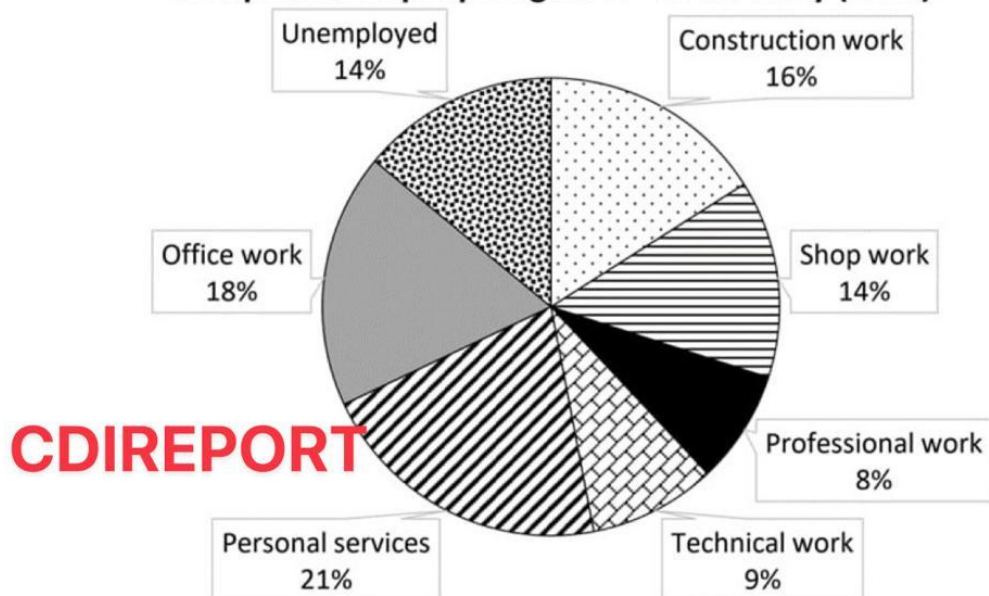

Writing task 1

You should spend about 20 minutes on this task.

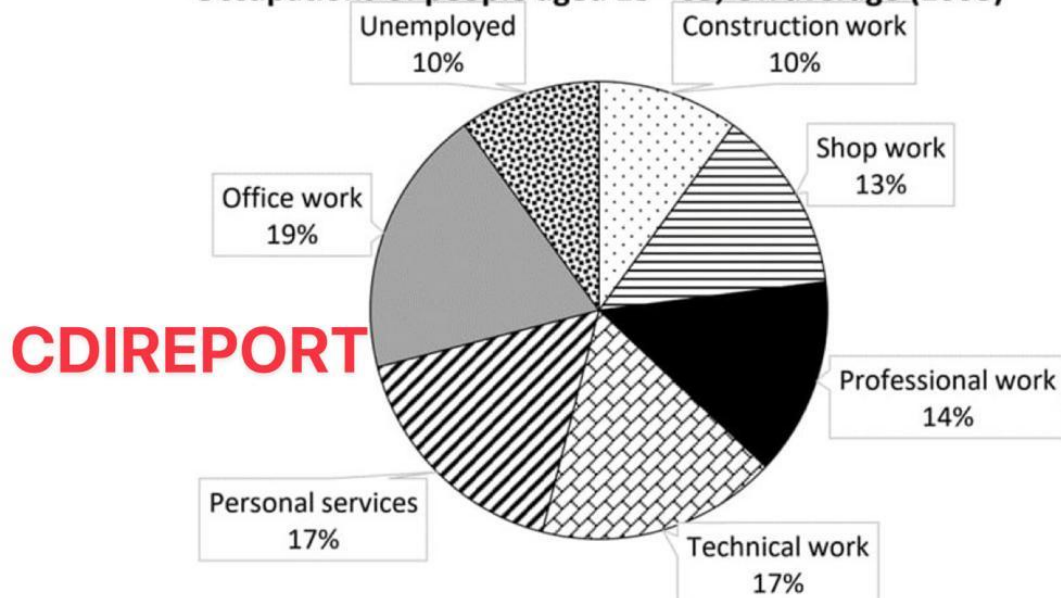

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Occupations of people aged 23 - 65 in Ashby (2008)

Occupations of people aged 23 - 65, UK average (2008)

The report informs about changes in the percentage terms of those from 23-65 employed in 6 occupations with unemployment rate in Ashby, a town in The UK and in general terms in this country in the year 2008 in two pie charts. Types of the occupations in the regard are construction, shop, professional, technical, personal services and office work.

In general, in Ashby the labor force mostly involved those working in personal services, while the popularity of professional and technical work were relatively less marked. In general terms in The UK, it was rather different that office work was more prevalent, surpassing the figure for personal services, with the same trend occurring with the professional work. Interestingly, The proportions of unemployed people were also noticeable compared to that of types of jobs as a whole, albeit at smaller proportions.

In 2008 in Ashby, by far the most pronounced share of people were involved in personal services, with a high of 21%, closely followed by the result of office work, remaining anchored at 18%. Afterwards, the figures for shop and construction work were also moderate, at 16% and 14% respectively. Professional and technical, in contrast, were the sectors with the smallest proportions, with the respective figures of 8% and 9%. As for unemployment rate, it fell to 14% of the total shares - a sizeable share compared to previous categories.

Focusing on the percentages of the same sectors in The UK as a whole, office-dominated sector prevailed more, at staggering 19%. By 2 points down, personal and technical categories remained a close second, whilst those worked in construction amounted to 16% - a higher proportion than that of in Ashby. The share of people involved in shop related occupations halved slightly to 13% in The UK. Professional workers constituted to 14% of the total shares therein. Interestingly, Ashby used to host more unemployed citizens than The UK as a whole in percentage terms, the result of which in The UK marked a low of 10%.

(334 words)

Useful Chunks for IELTS Reports

In general terms – broadly speaking; summarizing the main pattern or trend.

By far the most pronounced share – clearly the largest or most dominant portion.

Remained anchored at ... % – stayed fixed or stable at a specific percentage.

Closely followed by – immediately ranked after another category in size or proportion.

In contrast, ... were the sectors with the smallest proportions – introduces categories that had the lowest percentages.

Surpassing the figure for ... – exceeding or going above the percentage of another category.

The respective figures of ... – the individual data values corresponding to each category.

A sizeable share compared to previous categories – a relatively large portion when compared with earlier groups.

Remained a close second – stayed just behind the leading category in percentage or rank.

Moderate, at ... % – of average level or amount, recorded at a specific percentage.

Interestingly, ... were also noticeable compared to ... – draws attention to an unexpected but visible difference.

A higher proportion than that of ... – a larger percentage compared with another category.

Halved slightly to ... % – decreased by nearly half to a certain percentage.

Constituted ... of the total shares – made up or formed a specific part of the overall percentage.

The popularity of ... was relatively marked – the interest in or proportion of something was noticeably high.

It was rather different that ... was more prevalent – shows a contrast where one category appeared more common.

The same trend occurred with ... – indicates that a similar pattern was observed in another category.

Staggering ... % – surprisingly or impressively high percentage.

Marked a low of ... % – reached its lowest recorded point at a given percentage.

[illegible]

Writing Task 2

Environmental protection is the responsibility of politicians, not individuals, as individuals can do too little.

To what extent do you agree or disagree?

There has been a huge positive movement towards concerns on environmental degradation, as its impact on people's life is rising, and it is suggested that those who have authorities, politicians, should be the ones to cater for environment to mitigate its problems, not the common folk. I would oppose to this idea, as individuals lack power and resources to take actions, while I can get a picture

why this idea is being put forward.

One might argue that it is not just government accountable to establish environmental law, protecting flora and fauna, where the contribution people make also plays a huge intrinsic role therein. By making environmental conscious actions in their daily lives, such as recycling, reducing their energy consumption, switching to more eco-friendly energy supplies, and decreasing their carbon footprint, they are able to contribute as much as any government could do. Already developed countries, for instance, have raised such awareness in their individuals' opinions, and thus individuals put an extra effort to make the life more sustainable in their country. Such environmental awareness in ordinary lives of people can ensure the healthy growth and clean settings in communities, which do not only assist government as a whole, but do aim to improve the quality of life.

Said that, what individuals might not possess is the power to further maximize the output of their efforts. Likewise countries with the significant amount of control over actions and law, citizens are not in capability to confer fully-provided catering to the

environment, and might face an obstacle doing so. Meantime, the outcome being obtained by the government can actually make a noticeable difference. They at the local, state and national levels can create and enforce law, a regulation that tackles with the pollution, preserve natural resources and address issues such as climate change. Countries, furthermore, can also sign international agreements regardless of boundaries between them, a hassle that a citizen cannot in most cases manage to achieve, to unite their power and solve common geographical issue to make a real progress, where the Paris agreement can be a relevant example.

Plus, governments are uniquely positioned to deal with this crisis head-on, as financial strain cannot be a much of deal for them. Safeguarding environment, setting up law and implementing green policies might require a huge amount of money and effort. Sometimes not thousands but millions of dollars, an amount that many common people might struggle with to fund. Therefore, allocating reasonable funding to environmental initiatives should be accountability of those with power. It can be supported by the fact that people are, yet, supplying the government through taxation, it is a moral and societal duty of the government to invest in environmental advancement.

To conclude, a positive impact on the environment can be added through the little steps individuals take, whereas to make a real shift towards solving the issue the government should tailor green policies, deploying its authority and means.

(487 words)

Useful vocabulary and chunks from the essay

Environmental degradation – the deterioration of the natural environment through human activity or natural causes.

Mitigate its problems – reduce or lessen the severity of environmental issues.

Lack power and resources to take actions – be unable to act effectively due to limited authority or funding.

Environmentally conscious actions – behaviors guided by awareness of their impact on the planet.

Reducing energy consumption – lowering the use of electricity, fuel, or other energy sources.

Eco-friendly energy supplies – energy sources that do not harm the environment, such as solar or wind power.

Carbon footprint – the total amount of carbon dioxide and greenhouse gases produced by human activities.

Make life more sustainable – create conditions that support long-term environmental balance and well-being.

Environmental awareness – understanding and concern about ecological issues and their effects.

Healthy growth and clean settings in communities – development that ensures public health and a pollution-free environment.

Maximize the output of their efforts – achieve the highest possible results from environmental actions.

Create and enforce law / regulation – establish and implement legal rules to protect the environment.

Preserve natural resources – protect and maintain materials like water, forests, and minerals for future use.

Address issues such as climate change – take action to manage or solve global environmental challenges.

Sign international agreements – formally commit to global treaties or policies on environmental protection.

The Paris Agreement – a global accord aimed at limiting climate change by reducing carbon emissions.

Implementing green policies – putting environmentally friendly strategies into practice.

Allocating reasonable funding – providing sufficient financial support for environmental initiatives.

Moral and societal duty – an ethical and collective responsibility to act for the common good.

Deploying its authority and means – using governmental power and available resources to achieve environmental goals.

Test 11

Writing task 1

You should spend about 20 minutes on this task.

The table below shows the percentage of main types of dwellings in Victoria, the Northern Territory and Tasmania in 2001 and 2006.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The percentage of main types of dwelling, 2001-2006

Types of dwelling	Victoria		The Northern Territory		Tasmania	
	2001	2006	2001	2006	2001	2006
House	79	76	65	63	88	89
Semi-detached house	11	12	13	15	3	4
Flat / Apartment	9	10	8	11	7	6
Other	1	2	14	11	2	1

The report provides information about sorts of housing in areas - Victoria, the Northern Territory and Tasmania - at intervals of 2001 and 2006. Units are in percentage terms, and housing sorts in the regard are a house, semi-detached houses, a flat or apartment, and other undefined types.

Generally speaking, regardless of geographical location and period, an ordinary houses led the chart with the most pronounced percentage points, while semi-detached houses emerged as the second most popular options. The preference towards flats or apartments, in contrast, was not as much as the aforementioned ones - lower proportions of people resided in them.

Focusing on the number of plain houses in three areas, they were more prevalent in Tasmania, 88 in 2001 and 89 in 2007, compared to that of The Northern Territory (65 in 2001 and 63 in 2007 - the lowest ratio of such house capacity in this regard), and Victoria (79 in 2001 and 76 in 2007). It is clear that there was a little downward trend in the volume of houses in these areas, but Tasmania.

In comparison, semi-detached houses were the second most preferred house types, albeit at the considerably lower amount. In Victoria, there was only 11 such houses in 2001, the result of which then rose by a single point after 6 years. As for The Northern Territory, this ratio was slightly marked, with 13 in 2001 and a high of 15 in 2007, while Tasmania used to house a meager 3 and 4 semi-detached houses in 2001 and 2007 respectively.

Moving on, the number of flats averaged around 10 in all areas, with that of Tasmania recording 7 and 6 in the given years, whilst it accounted for 9 and 10 in Victorian areas. The figure for Northern Territory exhibited a rather upward trend, rising from 8 in 2001 up to 11 in 2007 - the area with the most flats in the table.

Aforementioned regions also accommodated other types of houses, with Victoria amounting to 1 and 2, Tasmania 2 and 1 from 2001 and 2007. The number of such undefined houses, however, was more pronounced in the Northern Territory, which amounted to 14 and 11, with a moderate growth over the years.

373 words

Useful vocabulary and chunks from the report

Sorts of housing – types or categories of homes such as houses, flats, or semi-detached units.

Units are in percentage terms – data are expressed as proportions or percentages.

Led the chart – ranked first or had the highest figure.

Most pronounced percentage points – the most noticeable or dominant values in the data.

Emerged as the second most popular options – appeared as the next preferred category after the leading one.

In contrast – showing an opposite or different trend.

Lower proportions of people resided in them – fewer individuals lived in that housing type.

More prevalent in Tasmania – more common or widespread in the Tasmanian region.

The lowest ratio in this regard – the smallest comparative figure in the dataset.

A little downward trend – a slight decrease over time.

Second most preferred house types – the next most chosen housing category after the leading one.

A meager [number] – an extremely small or low value.

A rather upward trend – a moderate increase in numbers.

Accounted for [X]% – represented or made up a specific proportion.

Undefined houses – housing types not clearly categorized or specified in the data.

[illegible]

Writing Task 2

Many men and women are making the decisions to have children later in life.

Why is this trend occurring?

What are the impact of this development on both family and society?

It is argued that as of now later parenthood has become a common trend for young couples, as it can be supported by the fact that it is financially and mentally favorable for upcoming parents. The result of such scenario can be economic strain and higher number of stable families on the society, while for young families it may open a space for privacy, development and less burden on children if the family is divorced.

Focusing on the determinants of this shift of delayed parenthood, financial preparation can stand out among many reasons. With rapid changing economy of many countries and prices, many people prefer to have kids once achieved a financial independence in their life. Most of the dilemmas and problems in a family occur due to a lack of money, where young couples struggle balancing their family expenses having two or more children at the same time, a situation that brings the family to the poverty. If looked, in fact, countries having a poverty issue is mostly likely to turn out to be the ones with the higher ratio of per child in a family, while developed and economically independent countries have only one or two kids, a paradox that clearly shows why some focus on having later and lesser children.

Another driver of this can be related to child upbringing courses' popularity. This sort of courses usually aim to educate upcoming mothers and fathers about difficulties and future issues that might arise during their parenthood, which is rather practical, and thus favored by many nowadays. This helps them to be prepared mentally and raise well-mannered children while stumbling across no challenge at all during the

process, a package of lessons that might come handy especially for mothers as they are the responsible ones for child's growth in most traditional families.

Delayed birth outcomes clearly associate with detrimental societal issues. To make it more clear, Japan - a country with the low reproduction rate - is facing what is known as declined population growth, where a volume of work force can shrink significantly, leaving a country with small digits of economic boost. Therefore, this country is taking measures to mitigate the issue by legislating policies for families to increase birth ratio, and even conferring incentives.

Regarding impact of later parenthood on families, it is positive in most cases. Firstly, privacy and self-development of parents as mothers and fathers can be urged, having more time to get to know each other well before deciding having a child, travelling and focusing on their career growth and education. Once have faced an obstacle, such parents are ready to alleviate it with joined force, not blaming the other for this situation.

Moreover, there is less probability to suffer for children in such families, as parents are well familiar with each other, and ready to deal with issues as a family. Later parenthood can result in more family-oriented couples, with stable moral support to each other. Notably, there are more figures regarding a divorce among young families - the worst outcome is the suffering a child has to do with. However, such risks are usually dealt with because of aforementioned reasons such as knowing each other well, preparation for parent life, and stable income to raise a child.

In conclusion, financial and mental preparation are the main triggers for delayed choice of parenthood; the negative influence on the economy and a higher likeliness of a stable family are the outcomes of it. Hence, considering it is mostly advantageous, such actions from young couples should be inspired, with baring in mind the economic state of a country.

603 words.

useful vocabulary items and chunks

Delayed parenthood – having children later in life than the usual age.

Financial and mental preparation – readiness in terms of money and emotional stability.

Economic strain – financial pressure or stress on individuals or the economy.

Stable families – families with strong and lasting relationships.

Privacy and self-development – personal space and time for growth and improvement.

Financial independence – the ability to support oneself without relying on others.

Balancing family expenses – managing the financial needs of a household effectively.

Poverty issue – the problem of people lacking enough income to meet basic needs.

Paradox that clearly shows – a seemingly contradictory fact that reveals a deeper truth.

Child upbringing courses – programs that train parents in child care and education.

Mentally prepared – emotionally and psychologically ready for responsibilities.

Detrimental societal issues – harmful social problems affecting communities.

Declined population growth – a reduction in the rate of population increase.

Mitigate the issue – reduce or lessen the seriousness of a problem.

Legislating policies – creating and enacting laws or rules.

Conferring incentives – giving rewards or benefits to encourage certain actions.

Career growth and education – advancement in professional and academic life.

Alleviate obstacles – make difficulties or problems easier to manage.

Stable moral support – consistent emotional encouragement within relationships.

Family-oriented couples – partners who prioritize family unity and long-term well-being.

Test 12

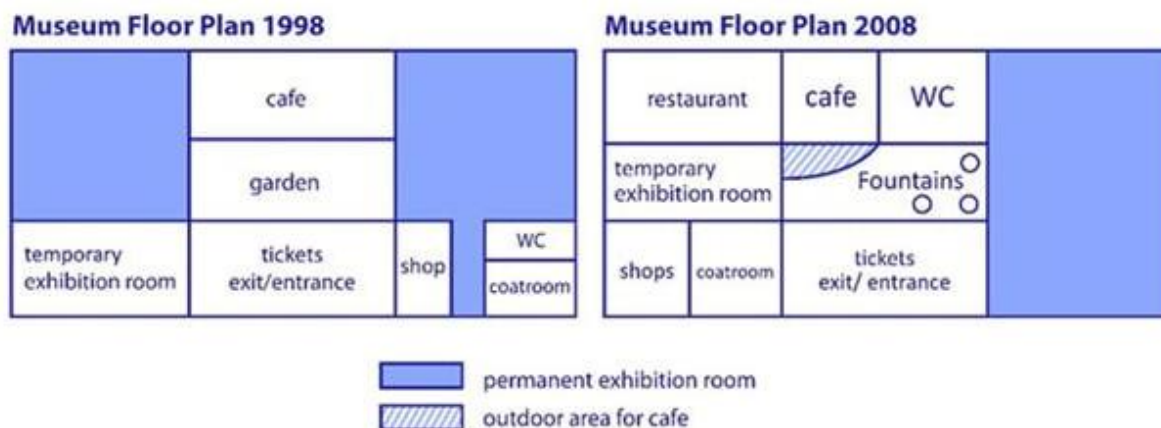

Writing task 1

You should spend about 20 minutes on this task.

The maps show the changes in the functional area of a museum in 1988 and after the decoration in 2008.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

T

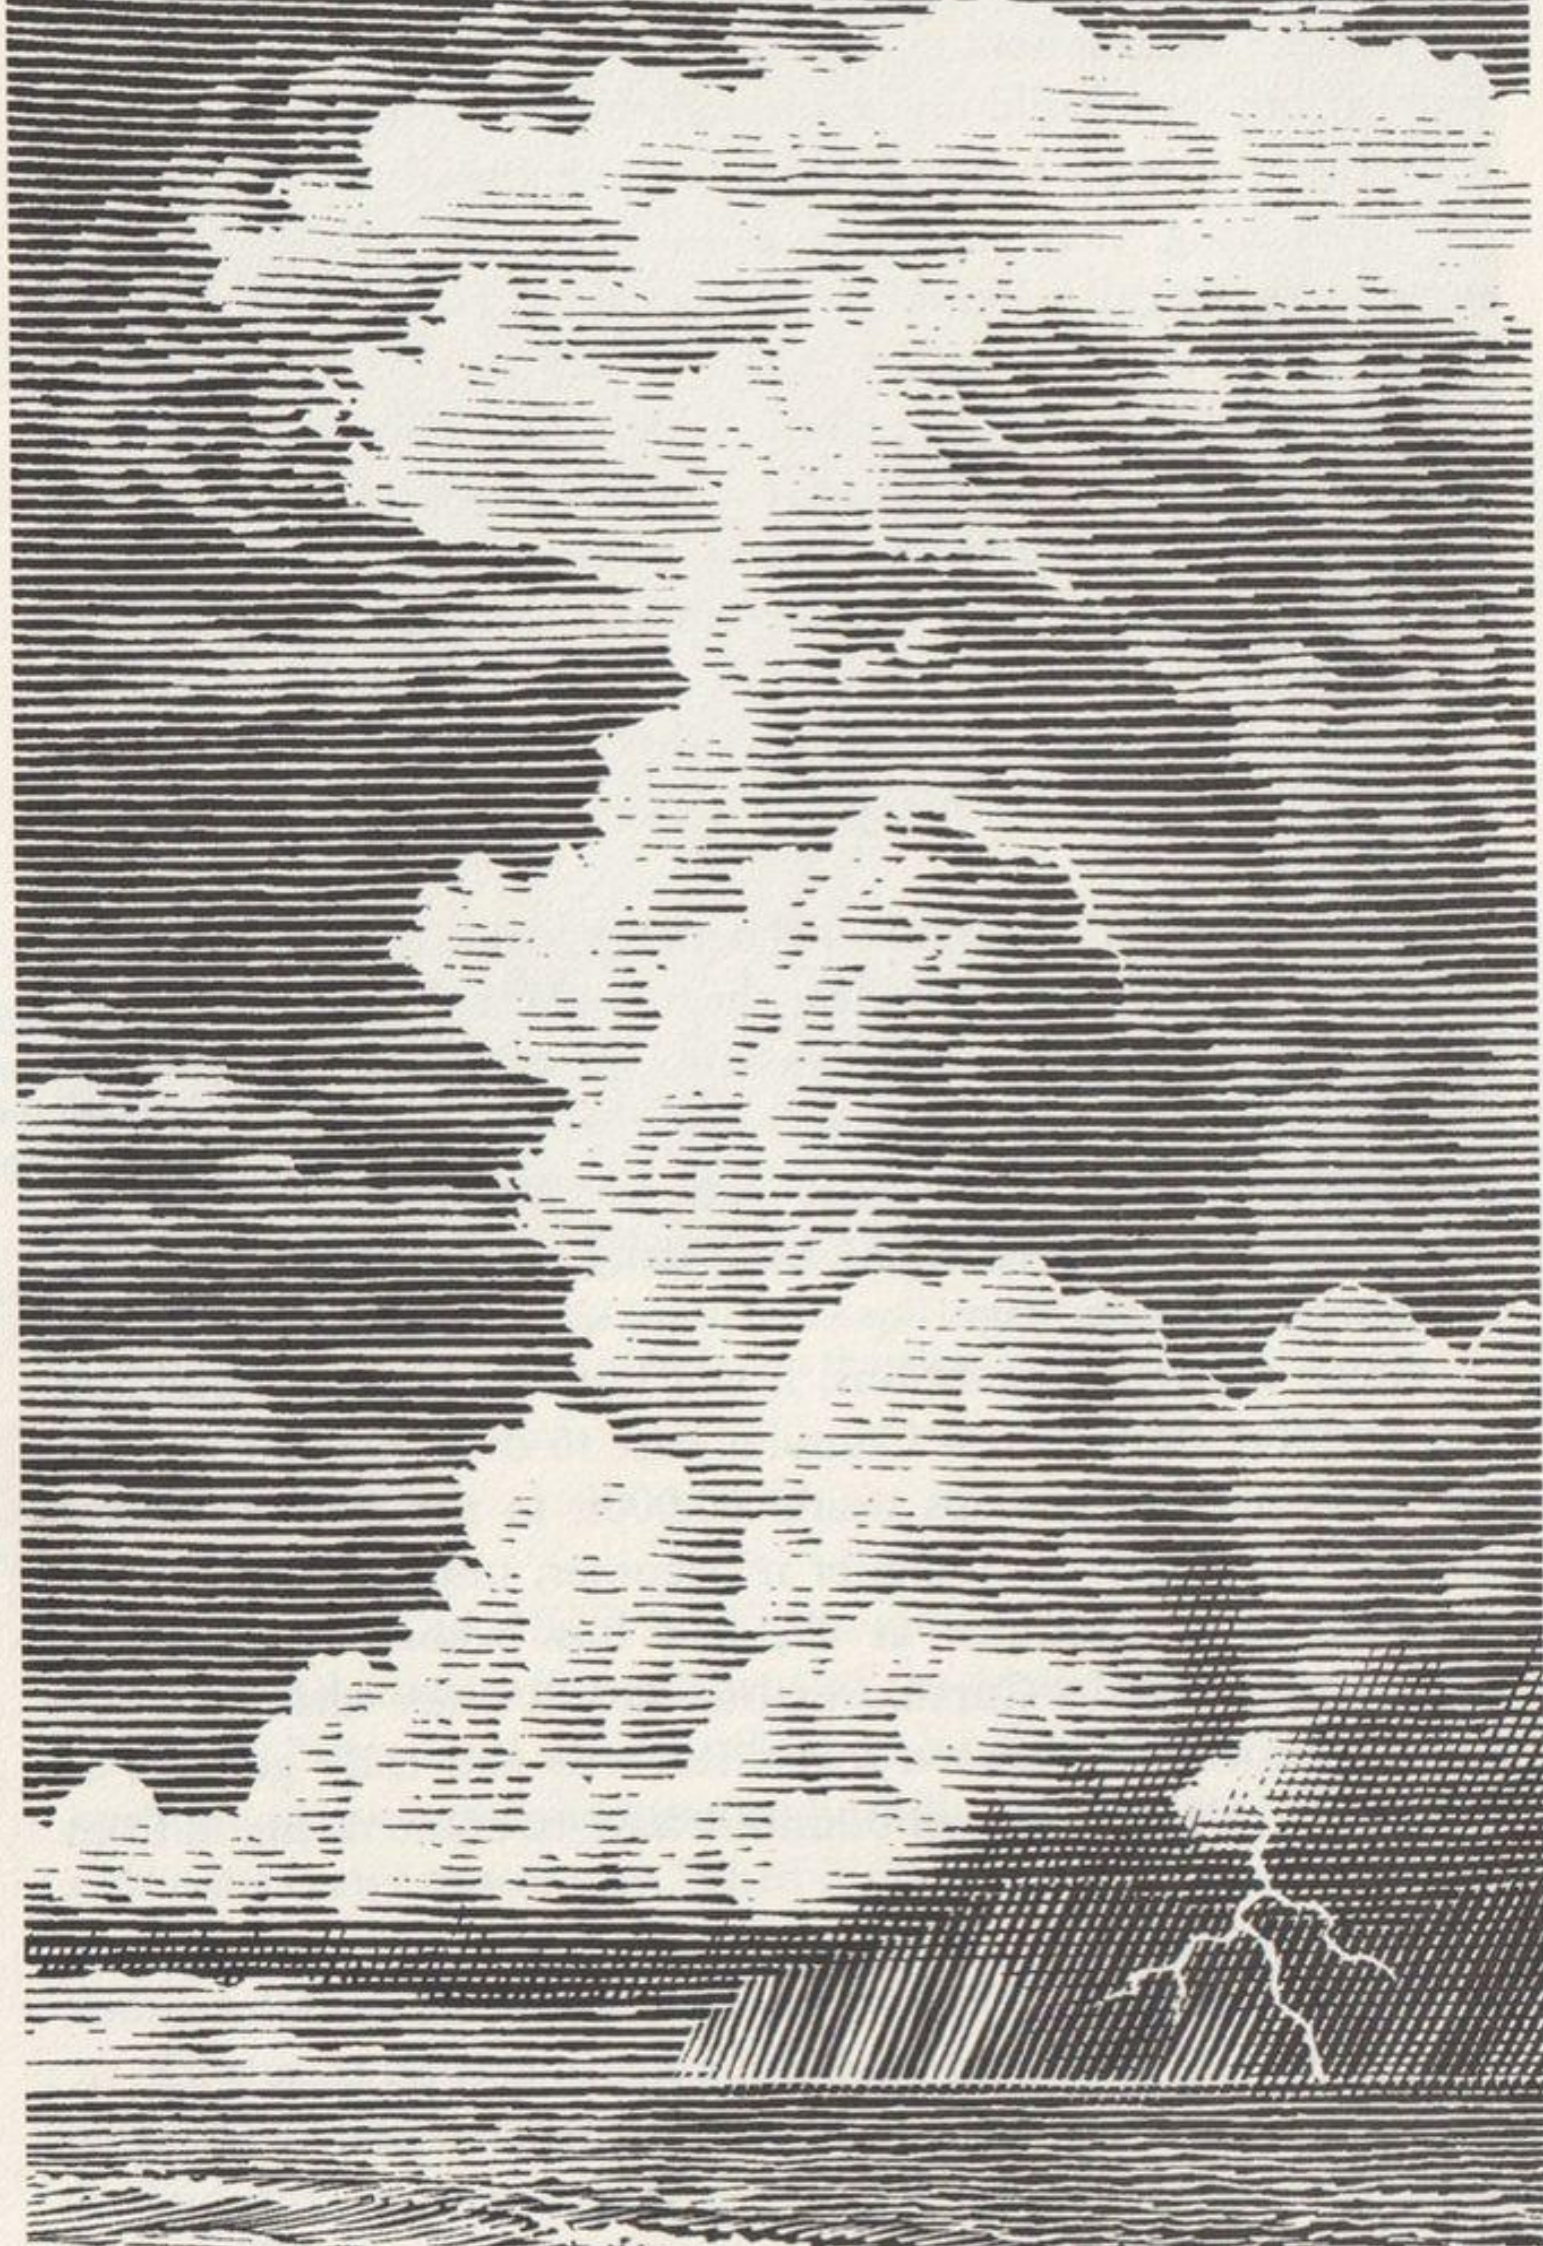

he report focuses on the changes took place in the layout of a museum floor plan over a 10-year period (1998 - 2008) in two images.

Generally speaking, the layout had undergone some rather radical relocation in its layout, with the emergence of new amenities, which made the museum floor more modernized and user-friendly. Of a particular note, by far the most noticeable alteration was the order of facilities, with permanent exhibition room being placed only to one side, whereas other facilities on the other side.

In 1998, the access to the floor used to be from the southernmost side of the plan, with exit being the same door. Tickets, additionally, were sold at the entrance, and to the left of which there was a shop, with temporary exhibition room located in the other side of the entrance, on the west-southern corner. Garden used to stay in the middle, while cafe' was based on top of it. On both top corners, permanent exhibition rooms used to occupy. Lastly, a bathroom and coatroom were situated on the right-bottom corner.

Upon completion of changes in 2008, all permanent exhibition rooms were supplanted to the right-hand side of the plan, where the access remained intact, with tickets selling area being inside still. The garden made way for fountains in the middle, with an open area for cafe', which was , in fact, on the top of them along with a bathroom. Left-hand side of the plan encompassed facilities like restaurant on the top, temporary exhibition room in the center, and down that there were relocated shops and coatroom. With these transformations, the museum plan appeared rather ordered and much of efficient use for museum visitors.

283 words

Useful chunks and vocabulary items

Focuses on the changes – describes or examines modifications over time.

Underwent radical relocation – experienced major movement or shifting of elements.

Emergence of new amenities – appearance or addition of new facilities or services.

Modernized and user-friendly – updated and designed for easy use by visitors.

Most noticeable alteration – the most visible or striking change.

Order of facilities – the arrangement or sequence of rooms and features.

Access to the floor – the entry point or way to enter the area.

Located on the west-southern corner – positioned in the lower-left side of the layout.

Used to stay in the middle – previously situated in the central area.

Upon completion of changes – after all modifications were finished.

Supplanted to the right-hand side – replaced and moved to the right section.

Made way for fountains – was replaced or cleared to allow the addition of fountains.

Encompassed facilities like – included or contained certain amenities.

Relocated shops and coatroom – moved these areas to a different position.

Efficient use for museum visitors – designed to improve convenience and functionality for guests.

[illegible]

Writing Task 2

These days people prefer to watch live performances (Shows, concerts) through tv or computer, online rather than go to the place of event.

To what extent do you agree or disagree?

Indisputably the internet has shaped much of the aspects of our live, turning upside down the way how we engage in many activities, and with that now it is a commonplace to see people opting for watching live performances online via their gadgets, not in the conventional way as before. I would argue there are more benefits that come with this, and thus am completely on the side of this view, although I believe there are some reasonable counterarguments to it.

Admittedly, live performances are better watched on the spot, as it can provide unrepeatable experience. Seeing your favorite singer or performer in person, and taking a few pictures are the most satisfying moments, and these make a person's experience unforgettable. Therefore, each year millions of people purchase tickets before even the concert begins months before, just to feel the environment of being present there rather than watching it several days for much affordable price online.

Having said that, I assert that our gadgets have now made it easier to feel the same feelings for far favorable reasons. First of all, it is about convenience. As attending a live performance requires buying tickets at high prices, it also involves travelling to the place of performance along with the accommodation and food costs, all of which make it even challenging for most of the people to be able to attend. While these hardships are what stop people relishing, online platforms offer it for reduced prices with comforts like being able to watch them whenever people want, considering the fact that they may have work or studies.

Plus, as above mentioned price is another common issue. While prices of tickets of well-known singers are exorbitant, platforms like Twitch or YouTube offer recorded versions for reasonable prices, and this can be a reason why many people now favor watching live performances at home, even if it means not in the exact time of the performance.

Furthermore, online streamed events are accessible regardless of age and personal circumstances. Streaming live performances online allows disabled people or those with non-apparent illnesses to enjoy the event at the fullest; meanwhile, young people can also tune in and watch the event: in cases when there are no supervisors to escort them to the spot of the event.

In conclusion, a wide range audience accessibility, low cost and lesser hustle to watch the live performance are the opportunities that make online broadcast performance desirable among viewers, while attending the real event has also benefits to offer.

417 words

Useful vocabulary items and language chunks from this essay

turning upside down the way how we engage in — completely changing how we do or experience something

opt for watching live performances online — choose to watch shows through the internet

in the conventional way — in the traditional or old-fashioned manner

unrepeatable experience — a moment that cannot be recreated or replaced

feel the environment of being present there — experience the atmosphere of a live setting

for far favorable reasons — for much better or more beneficial reasons

it is about convenience — the main advantage is ease and comfort

attending a live performance requires buying tickets at high prices — expressing the financial difficulty of going to real events

make it even challenging for most of the people — increase difficulty for many individuals

reduced prices with comforts like being able to watch whenever — expressing affordability and flexibility of online events

exorbitant prices — extremely high and unreasonable ticket costs

favor watching live performances at home — prefer viewing events from home

accessible regardless of age and personal circumstances — available to everyone, no matter their situation

non-apparent illnesses — invisible or hidden medical conditions

tune in and watch the event — join or view a live broadcast

no supervisors to escort them — no adults or guardians to accompany young people

wide range audience accessibility — large and diverse groups of people can access it

lesser hustle to watch — less effort or trouble required to view online events

desirable among viewers — attractive or appealing to audiences

attending the real event has also benefits to offer — the live experience still holds value despite alternatives

[illegible]

Test 13

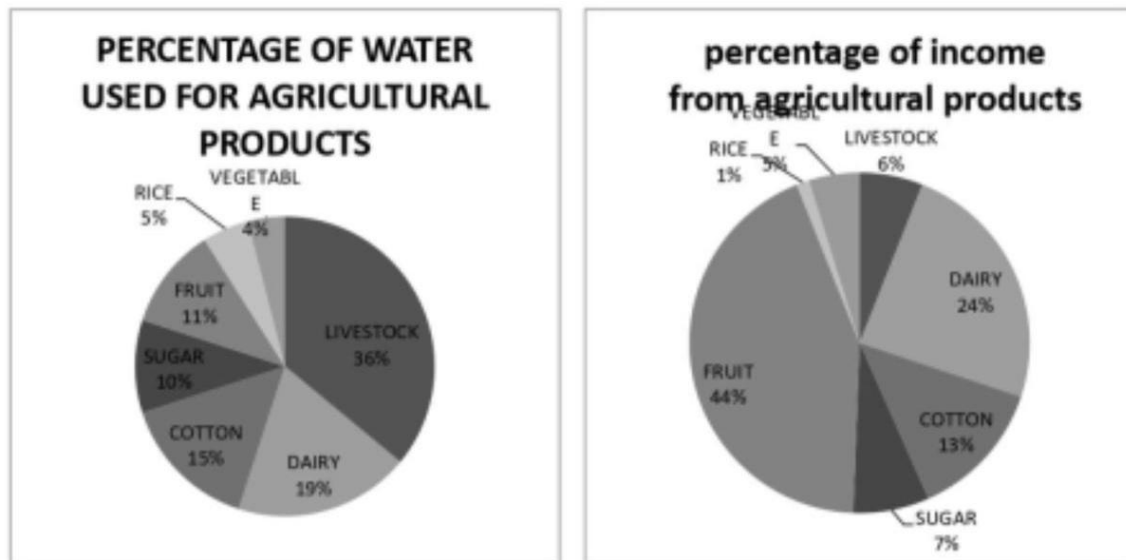

Writing task 1

You should spend about 20 minutes on this task.

The charts below show the use of water for agriculture products in Australia in 2004 and values of these products to the Australian economy in the same year.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report focuses on the information about the water consumption of 7 sectors in agriculture in percentage terms in Australia in the year 2004, with the income shares from these sectors in two pie charts.

Generally speaking, livestock appeared to be the most demanding sector for water, while water used for rice and vegetable cultivation encompassed the smallest proportions. Additionally, the most noticeable revenue stream was fruit-cultivation, with making up almost the half of the economy, where sources like sugar, rice, vegetable, and livestock sectors contributed to smaller percentages.

In 2004, by the largest figure for water usage was recorded by that for livestock, with staggering 36%, followed by that of dairy, down to 19%. The indexes of cotton, fruit and sugar made up relatively less proportions, with the respective figures of 15%, 11% and 10%. The remaining 10% was split even among sectors like rice and vegetable, which meant in Australia these types of products were not favored in agriculture department.

Reporting figures regarding income rates from these goods, it appears most of the people made a living in fruit sector, which accounted for overwhelming 44%, with the result of dairy constituting almost the half of the result, at 24%. 13% income from total revenue came from cotton products, while 7% and 6% were from sugar and livestock

respectively. Sectors with the lowest income percentage points were responsible for rice(a mere 1%) and sugar (up to 5%).

240 words

Useful vocabulary items and language chunks from this report

water consumption — the amount of water used by sectors or individuals

in percentage terms — expressed as a percentage

income shares — the portion of total earnings each sector contributes

demanding sector — a field or industry that requires a large amount of resources

encompassed the smallest proportions — made up the least share or part

revenue stream — a source of income for a company or sector

made up almost the half of the economy — accounted for nearly 50% of total income

contributed to smaller percentages — added to a small part of the total

the largest figure for water usage — the highest proportion of water use

staggering 36% — surprisingly or impressively high percentage

relatively less proportions — smaller compared to others

split evenly among sectors — divided equally between categories

made a living in fruit sector — earned income from producing fruits

accounted for overwhelming 44% — represented a dominant portion of 44%

the lowest income percentage points — the smallest values in terms of revenue share

[illegible]

Writing Task 2

Full-time students should spend a lot of time on studies, but they should be involved in other activities too.

To what extent do you agree or disagree?

In fact, a university life of a student usually keeps them in a strict timetable, and most of full-time students are engaged in studies. There is, however, a view that the involvement of other activities like outdoor ones, volunteer work and sports might benefit them as well. Personally, I totally support this view, as focusing solely on academic achievement can harm than good as a whole.

While I believe in the necessity of

extracurricular activities, I also neglect that academic achievements can be of importance. During university years, for most of the students the main priority is to acquire as much as possible knowledge of the course they are doing, as this is going to be useful and vital in their future career, while being involved in other activities can come as a distraction, and shift their concentration.

Nevertheless, extracurricular activities should be encouraged among full-time students for reasons, like these can help lessen the academic pressure. Constant involvement in academic studies might put burden on students, such as emotional and physical tolls, where these can have a negative impact on both mental and physical well-being of a student, who is due to further continue their studies for 4 or 5 years. Hence, it is common in American universities to offer such activities, sports clubs and volunteer work, to students, which is in order to unwind from consistent academic pressure.

Another potential perk student may be provided with these leisure time activities is the enhanced chance to gain skills outside of the classroom, and the ones that these classrooms are in capability to confer. Students can practice multiple kinds of expertise, performing arts, being volunteers in public and social work, and doing

diverse sports, and thus improving soft and hard skills beyond classrooms like leadership, resistance, communication skills, adaptability, problem solving and to name just a few- often difficult to teach.

Furthermore, to prevent any extra challenges while being involved in extracurricular activities, students need to maintain a right balance between scholar and leisure activities. By this way, the downside above mentioned can be fed off.

In conclusion, extracurricular activities are indeed vital tools for students to let their steam of and have an opportunity to grow skills, which otherwise are possible to obtain, and these are the reasons why I am of this opinion, although they may interrupt students' academic studies. However, I feel that it is also important to balance of them.

404 words

Useful vocabulary items and language chunks from this essay

strict timetable — a tightly organized schedule with little flexibility

full-time students — learners who dedicate all their time to academic study

academic achievement — success in educational performance or grades

extracurricular activities — non-academic tasks such as sports, clubs, or volunteering

focusing solely on — concentrating only on one thing

do more harm than good — to have negative rather than positive effects

main priority — the most important goal or focus

acquire knowledge — to gain understanding or information through study

shift their concentration — to move attention away from the main focus

academic pressure — mental or emotional stress caused by study demands

emotional and physical tolls — negative effects on mental and bodily health

mental and physical well-being — overall health of mind and body

unwind from consistent academic pressure — relax after continuous studying

enhanced chance to gain skills — greater opportunity to learn new abilities

soft and hard skills — interpersonal (soft) and technical (hard) abilities

beyond classrooms — outside formal academic settings

maintain a right balance — to keep an equal focus between two activities

prevent any extra challenges — avoid creating additional difficulties

let their steam off — release stress or tension (idiomatic, informal academic tone)

opportunity to grow skills — chance to develop personal or professional abilities

[illegible]

Test 14

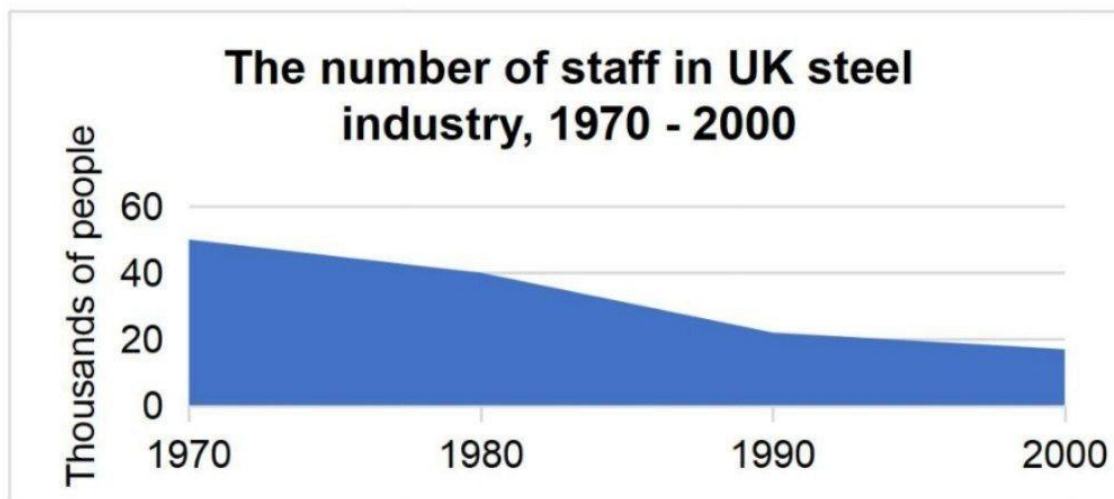

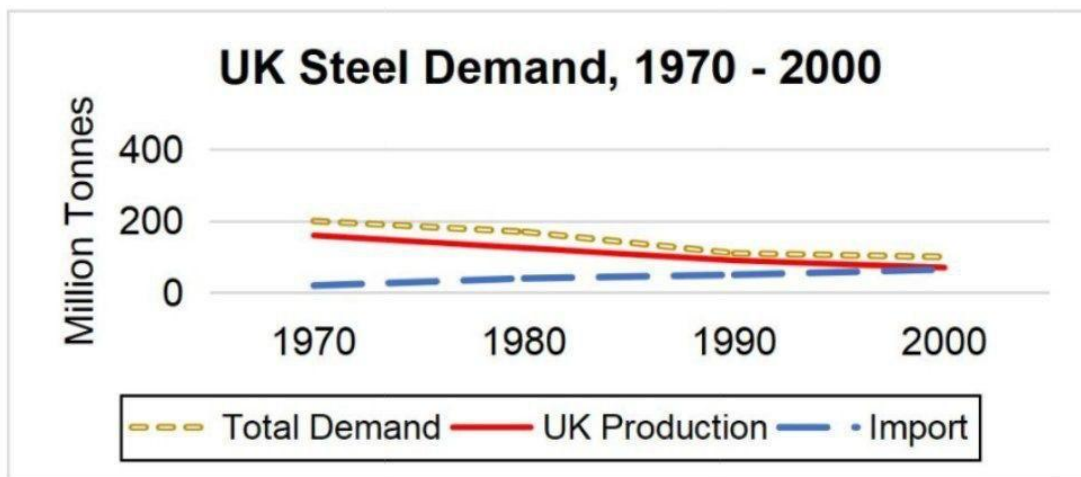

Writing task 1

You should spend about 20 minutes on this task.

The line graph shows the demand while the second charts show the number of staff in the UK steel industry.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report outlines the data on the volume of UK steel demand (in million tones) dis aggregated into total demand, UK production and import categories, along with the size of the workforce employed (in thousands of people) in this industry from 1970 to 2000 in two line graphs.

Overall, imports of steel increased moderately over the years, while both manufacture and demand experienced substantial declines, yet all the three converged in the same point in the end, whereas the significant amount of people exhibited a dramatic contraction in this industry.

Focusing on the total steel demand, it showed a pronounced downward trend, the result of which initiated form 200 millions tones in 1970 and plummeted to 100 millions tones in 2000, the domestic production ratio closely mirrored this downward trend, which from a high of 200 millions tones went down to 100 million tones. In stark contrast, there was a disparity in import levels - it surged radically from almost 0 to the same 100 million tones, indicating the convergence of local production, demand and import volumes at roughly the same level by 2000 - a structurally balanced market state.

Moving on workforce in steel industry from 1970 to 2000, it commenced at a high of 50 thousand, which fell by two-thirds by the end of the period. Till 1980, there was a steady dive to 40 thousand, which further dipped markedly in 2000, accounting for 20 thousand workers, which aligned with the reduced demand and production within the steel sector.

252 words

Useful vocabulary items and language chunks from this report

disaggregated into categories — divided into separate parts or groups for analysis

the size of the workforce employed — the number of people working in a particular industry

experienced substantial declines — showed a significant decrease over time

converged at the same point — met or reached the same level after changes

exhibited a dramatic contraction — showed a sharp or sudden reduction

pronounced downward trend — a clear and noticeable decrease over a period

plummeted to — fell suddenly and steeply to a lower level

closely mirrored this trend — followed a similar pattern or direction

in stark contrast — used to highlight a major difference between two things

surged radically — increased suddenly and sharply

indicating the convergence of — showing that several things reached the same point

structurally balanced market state — a situation where production, imports, and demand are equal or stable

commenced at a high of — started from a large or high figure

fell by two-thirds — decreased to one-third of the original value

aligned with the reduced demand and production — matched or corresponded with the overall decrease in output and need

[illegible]

Writing Task 2

Some countries introduced a law to limit the hours that employees ask employer to work.

Why do you think governments did this ?

Is it a positive or negative development ?

It is argued that reducing working hours of employees has been required from companies to legislate in their workplaces around the world, as this legislation targets to boost the quality of work and personal life of people, I am completely critical of the view that it is a positive development.

The main motive behind shortened workweeks is straightforward, where the law prioritizes the well-being of workers, aiming to improve

their both professional and personal life. Beyond spending increased time with family members, which strengthens the bond within family and fosters mutual understanding, this rule also focuses on omitting emotional and physical tolls that occur during the workweeks of workers, such as burnout, stress and depression - ones that might be a direct result of the rush to meet deadlines or pressure from higher ups of their workplace, for instance. Such legislation could lead to situations where workers begin to care more about themselves, feeling more content with their lives. This, in turn, might have a positive effect on their performance, as a stable personal life often contributes to better outcomes at work.

Although there are reasonable justification to why this shift may be a useful one, I opt to the view that it is rather negative, and this rule is no silver bullet to improve the quality of work in companies being done. This is mainly because one-size-fits-all laws can be blunt instruments, while it is far from being feasible in almost all countries, To put it simple, such a legislation can be achieved in certain countries, like western countries with high economic country state, it is not achievable in Asian or African

countries, which reversely shows a low-state of economy, and reduced work days might result in a downturn in economical progress.

In conclusion, among many drivers towards the preference to short work hours concern on worker well-being stands out, and it is skeptical that this cannot be practical in any geographical location, given the fact that every country has diverse economic states.

333 words

Useful vocabulary items and chunks from this essay

required from companies to legislate – companies being asked or made to create or follow a new law.

boost the quality of work and personal life – to improve both job performance and personal well-being.

completely critical of the view – strongly disagreeing with or opposing an opinion.

the main motive behind shortened workweeks – the key reason for reducing the number of working days.

law prioritizes the well-being of workers – a rule or policy that focuses on keeping employees healthy and happy.

improve both professional and personal life – to make work life and private life better together.

spending increased time with family members – using more time to be with family.

strengthens the bond within family – makes family relationships closer and stronger.

fosters mutual understanding – helps people understand and support each other.

emotional and physical tolls during workweeks – stress and tiredness affecting mind and body caused by work.

burnout, stress and depression – mental and emotional exhaustion from overworking.

pressure from higher-ups at workplace – stress caused by demands or expectations from bosses.

workers begin to care more about themselves – employees start valuing their health and happiness.

feeling more content with their lives – feeling happier and more satisfied with life.

positive effect on their performance – having a good impact on how well they do their job.

one-size-fits-all laws can be blunt instruments – the same rule for everyone can be ineffective or unfair.

far from being feasible in almost all countries – not realistic or possible in most nations.

reduced work days might result in downturn in economy – fewer workdays could cause economic slowdown.

concern on worker well-being stands out – care for employee health and happiness is most noticeable.

[illegible]

Test 14

Writing task 1

You should spend about 20 minutes on this task.

The tables show results of 2 surveys done in 1980 and 2010 on various aspects of city living in a particular city. Units are measured in percentage.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Year 1980

Aspects	Good	Neither good Nor Bad	Bad
Education	72	23	5
Healthcare	82	10	8
Environment	72	22	6
Shops	64	24	12
Employment	62	22	10
Transport	52	16	32

Year 2010

Aspects	Good	Neither good Nor Bad	Bad
Education	82	11	9
Healthcare	74	14	12
Environment	71	13	16
Shops	60	24	16
Employment	72	5	23
Transport	39	23	38

The report focuses on the result of two surveys done to assess the aspects of living in urban places in three categories- good, bad, and none of them- at intervals of 1980 and 2010 in two tables. Units are in percentage terms.

Generally speaking, there were more people leaning towards residing in city as a favorable act of doing in both years generally compared to those who opposed to this idea, while the figures for concerns on brackets such as employment, health-care and environments rose noticeably over the years. Additionally, the index of those who gave neutral feedback exhibited a downturn trend over the years.

In 1980, health-care was the most favored category, with overwhelming a high of 82%, while education and environment lagged behind, at 72%. By 2010, the percent of the former, however, fell heavily to 74, and being surpassed by 8 points by that of education, The index of environment kept steady, with a tiny decline to 71%. In 1980, other categories such as shops, employment and transport ranked as the most satisfying side of urban life from a low 52% by transport to 64 % in shops.

Those who had neutral perspectives about these aspects had rather lower rankings, with in 1980 the proportions being from a low 16% in transport to a high of in the bracket in education at 23%. By 2010, these relatively showed an upward trend, where transport topped the list, at 23%, and the reverse was true for employment, marking a meager 5%.

Poor feedback was also received, which seemed to increase over 30 years. In 1980, the front-runner was transport in 1980, which in fact remained at the same position in 2010, at 32% and 38% respectively. In the first year, below 10 percent rankings were pointed to education, health-care and environment, while the percent terms of other categories contributed to around 10%. By the second period of survey, it revised to a higher percentages, with everyone category, except chart-leader transport and a lowest low score given education(9%), recording around from 12% to 23%.

342 words

Useful language chunks and vocabulary items from this report

focuses on the result of two surveys – describes the main subject of the report.

aspects of living in urban places – different areas of city life (like transport, health, etc.).

units are in percentage terms – indicates that data is expressed as percentages.

leaning towards residing in city – people prefer or are more in favor of living in cities.

favorable act of doing – something considered positive or beneficial.

opposed to this idea – disagreeing with or against the idea.

rose noticeably – increased clearly or significantly.

exhibited a downturn trend – showed a decline or decrease over time.

overwhelming a high of 82% – reached a very high proportion or peak.

legged behind – performed worse or was lower than others.

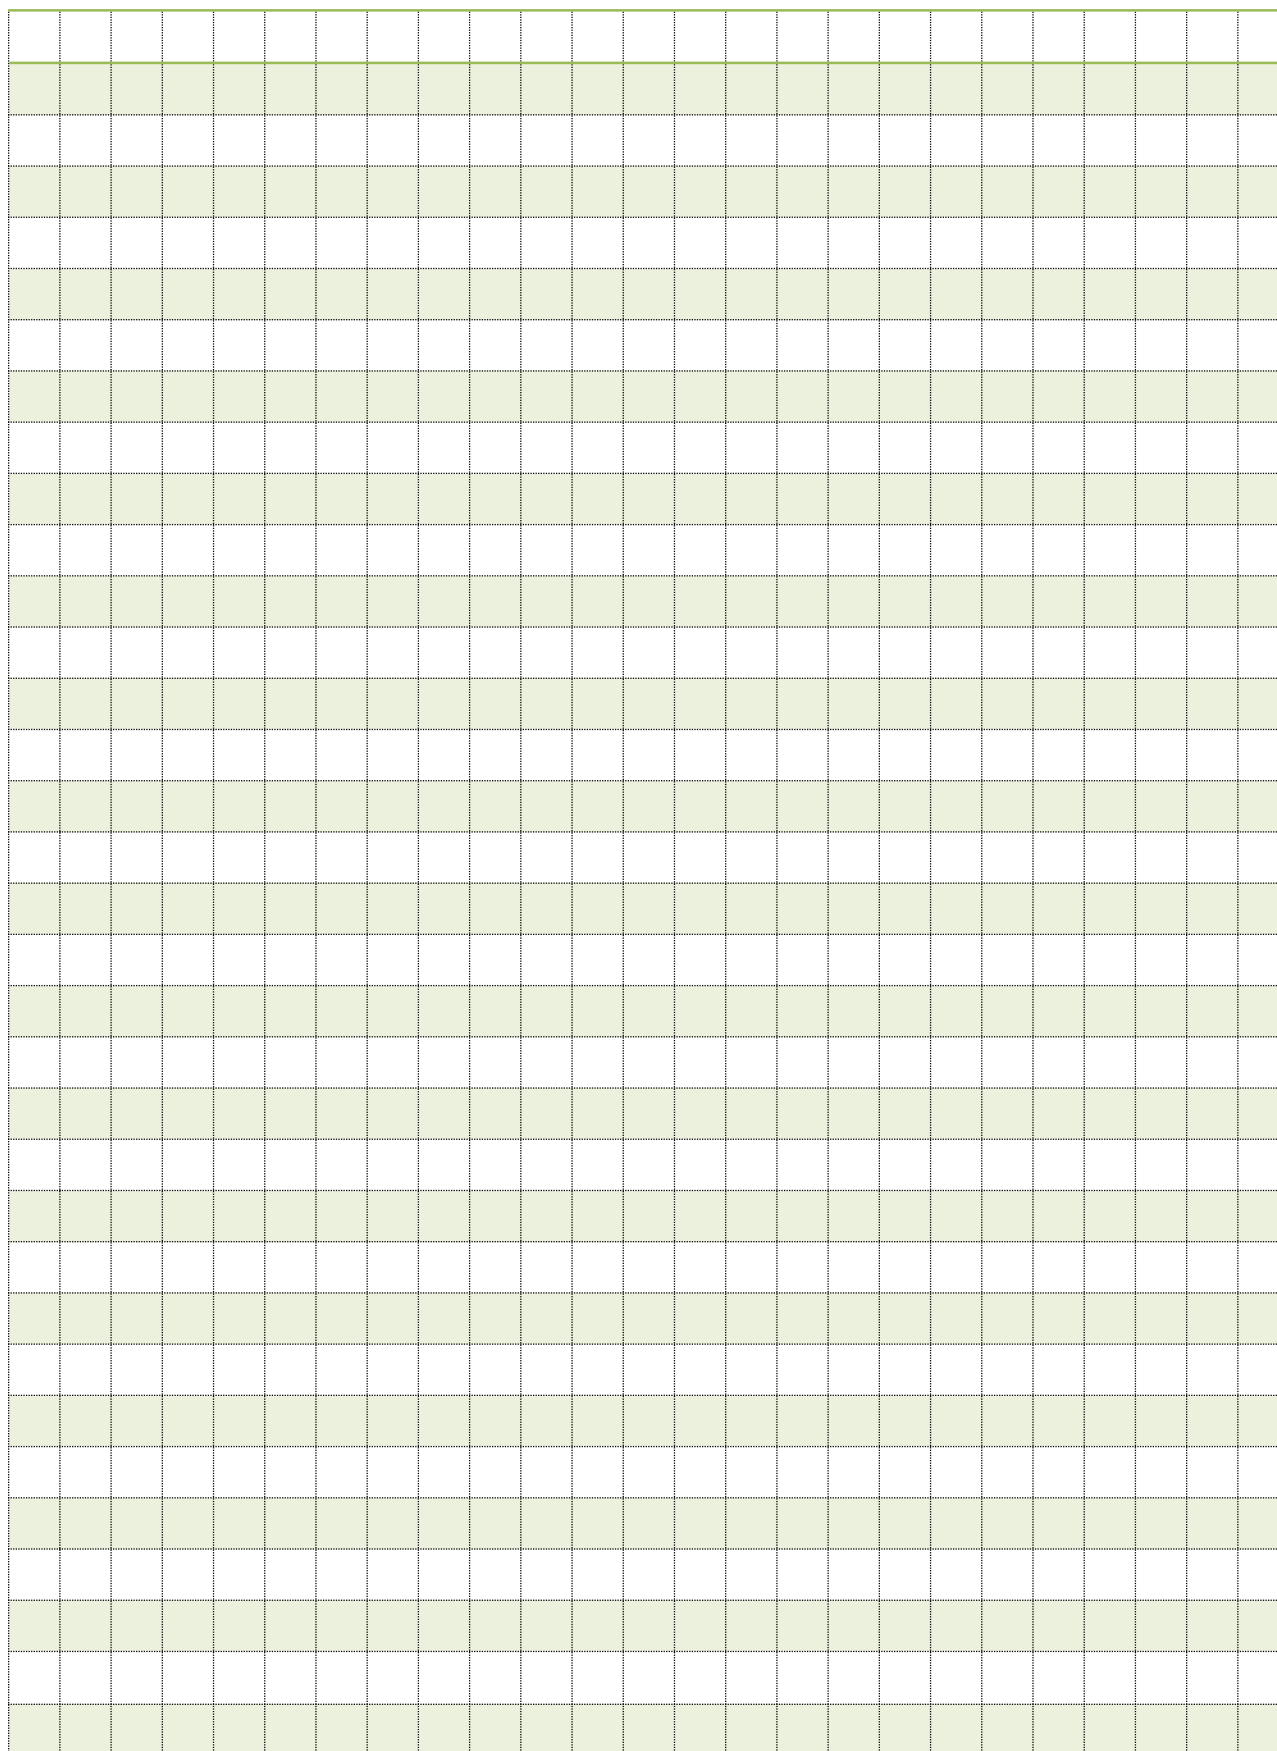

kept steady – remained almost unchanged or stable.

ranked as the most satisfying side – considered the most positive or enjoyable aspect.

neutral perspectives – opinions that are neither positive nor negative.

topped the list – had the highest percentage or rank.

revised to a higher percentage – changed or increased to a greater value.

Writing Task 2

Some people think that it is good for a country's culture to show imported foreign films and TV programs. Other people think that a country should develop their own films and TV programs instead.

Discuss both these views and give your own opinion.

TV-broadcasting requires vital attention towards the appeal of the information and relevance to the country, and there is a view that international tv programs and films should be allowed on a national media, while there are opponents to this view, claiming the importance of the production national programs. While the latter view seems flawless in certain areas, I would support the former view considering the positive impact it can have on the people's worldview and skills.

Locally produced tv programs and shows can present several advantages, one of which is the government control over what is being aired on tv and the chance to manipulate over people's consumerism. By dominating in media, the government can control behavioral changes in young generation, and they can also urge feelings like patriotism and cultural admiration in the youth, which might result in citizens, who have high hopes and affection to their country in the long run. Moreover, such local tv programs are able to preserve culture and tradition of the country. They often promote cultural events, regional traditions and customs, the things rarely broadcast on tv and overlooked too. This could help to protect traditions and pass them down to next generations, and also to introduce to current generations like Gen Z, those who have little about what the traditions and customs are.

On the other hand, I assert that exposing people to overseas programs is far favorable in terms of benefits they have to offer. First of all, these tv shows often are critical tools to boost language skills of those learning foreign languages like English. They can obtain language chunks, learn new vocabulary and grab some useful tips, and enhance their pronunciation skills. For instance, as I observed in language courses, most of the teachers suggest watching and listening to foreign content to their students to deal with some difficulties in learning process.

Another justification towards international production is the willingness to be exposed to some high-quality media. Western countries like in Europe and America are well-known for their professionally made content including features like storytelling, cinematography and visual effects, which make content more intriguing and engaging. One of the best examples can be movies made by Marvel Studios - popular for their science-fiction movies and children-friendly animations, targeting both adult and young audiences as they are consumed all over the world with high enthusiasm.

In conclusion, while I can acknowledge the fact it is vital to broadcast national programs to foster national identity, I lean more towards the idea that international media content can be of huge importance in both education and entertainment.

433 words

Useful vocabulary items and language chunks from this essay

vital attention – great or essential focus or care.

appeal of the information – the attractiveness or interest level of the content.

relevance to the country – how closely something is connected or meaningful to national context.

national media – TV, radio, or online platforms owned or controlled within a country.

the importance of the production national programs – the value placed on creating local TV content.

flawless in certain areas – seems perfect or reasonable in some aspects.

positive impact – beneficial influence or effect.

people's worldview – how individuals see and understand the world.

government control over what is being aired – the authority to decide what appears on TV.

manipulate over people's consumerism – influence people's buying habits or desires.

urge feelings like patriotism and cultural admiration – inspire love and respect for one's culture and nation.

preserve culture and tradition – protect and maintain national customs and values.

pass them down to next generations – transfer traditions to younger people.

exposing people to overseas programs – letting people watch international shows.

critical tools to boost language skills – powerful methods to improve language ability.

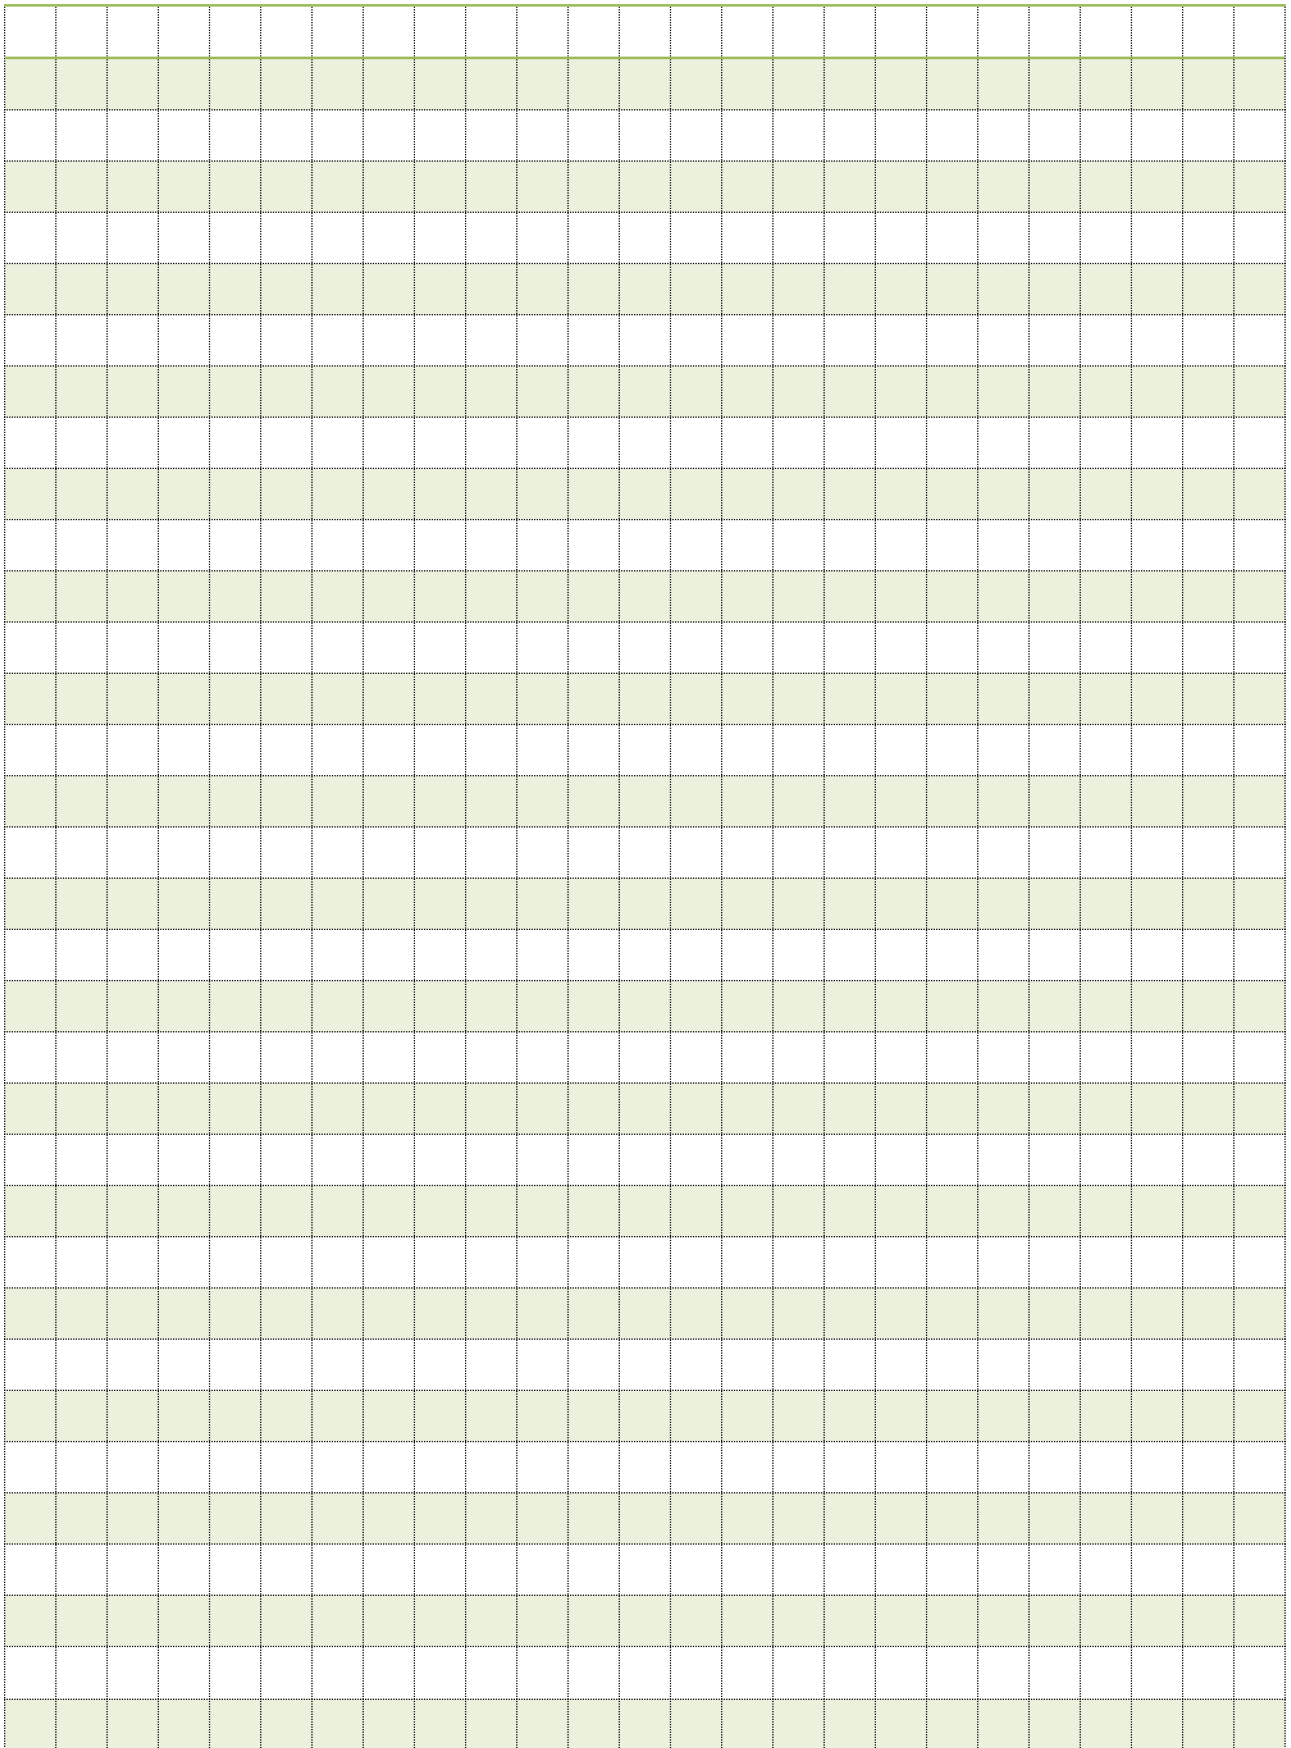

obtain language chunks – learn natural word combinations or expressions.

professionally made content – media produced with high technical and creative standards.

make content more intriguing and engaging – make programs more interesting and captivating.

targeting both adult and young audiences – designed to appeal to multiple age groups.

foster national identity – strengthen a shared sense of belonging and culture.

Test 15

Writing task 1

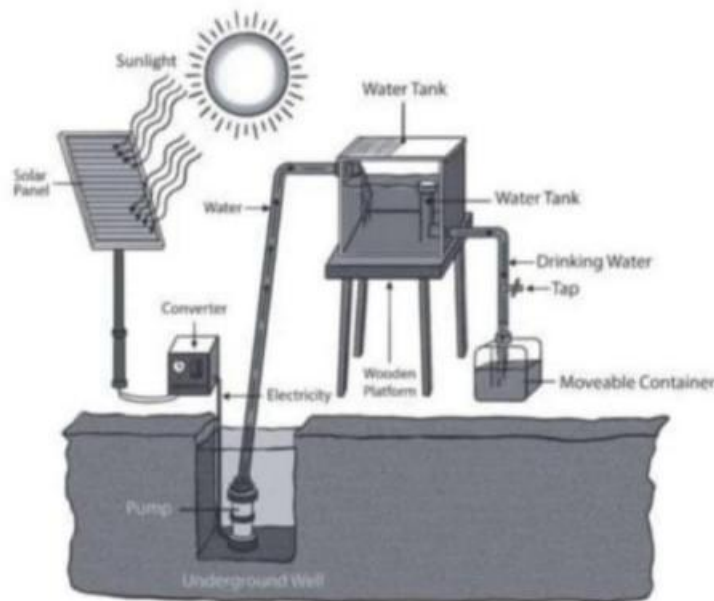

You should spend about 20 minutes on this task.

The diagram below shows how drinking is made using solar power.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

Write at least 150 words.

The report gives information about the extraction of drinking water via the use of solar power as it is shown in the diagram.

In general, the water processing is rather sophisticated, comprising several stages: firstly, energy is provided through solar panels, which is followed by extracting underground water, and finally storing this water. The process is fully automated with the use of several equipment and tools and is completely energy-self-sufficient.

It all begins with the solar panels which are placed to capture solar lights and channel energy obtained to the converter, a device that helps to turn solar energy to the one that can be later used to generate electricity. The device is often based near an underground well so as to provide electricity travelling to a pump - it is laid under water.

Then water journeys to the water tank, which is positioned on the surface several heights above the ground fixed to the wooden platform. Inside of the tank, there is a

special tube, once filled with enough water, that directs water either to the tap to access water easily or the mobile container to store drinking water.

190 words

Useful language chunks and vocabulary items from this report

- ✓ rather sophisticated – complex and carefully designed
- ✓ comprising several stages – consisting of multiple steps
- ✓ fully automated – operating without human intervention
- ✓ energy-self-sufficient – not dependent on external power sources
- ✓ capture solar energy – collect energy from sunlight
- ✓ channel energy to – direct power towards a device
- ✓ energy converter – a device that transforms one form of energy into another
- ✓ generate electricity – produce electrical power
- ✓ underground well – a deep source of water below the surface
- ✓ submerged pump – a pump placed under water
- ✓ positioned on the surface – located above ground level
- ✓ secured to a wooden platform – firmly fixed onto a support structure
- ✓ once filled with sufficient water – after reaching an adequate level
- ✓ directs water to – guides the flow of water towards
- ✓ mobile storage container – a movable unit for storing water

[illegible]

Writing task 2

You should spend about 40 minutes on this task

Doctors recommend that older people should get regular exercise. However, many older people do not take enough exercise.

What could be the reason for this?

What can be done to encourage them to take exercise?

Maintaining an active lifestyle is indeed an intrinsic aspect of its sort, usually more needed in late years of life, and there is a suggestion by doctors that regular workout should be ensured by the elderly, as they seem to do so less, which is mostly owing to poor health conditions and financial barriers. There are several initiatives that can be put forward to urge routine exercises for the elderly.

To start with the reasons behind why there are increasingly less number of elderly people taking regular exercise, the main

driver can be, not having motivation which many can assume, but the fact that senior people oftentimes struggle to do exercises, which seem quite easy for younger people, due to health risks. In their late 50s or 60s, most elderly people develop chronic diseases such as heart attack or respiratory illness - doing workout can do more harm than good. Plus, these harmful conditions are often results of their unhealthy lifestyles, which they seem to struggle to quit later on even when they realize their adverse effects to their health. Even when they start following balanced life style, they might see negative effects of doing exercises due to long term influence of habits, say, smoking can prevent from running.

Another significant, yet often overlooked, reasons is the financial constraint. Due to lack of enough money - as it is obvious going to the gym or eating organic and following a healthy diet require some money - the elderly might face a challenge, when they are already in difficulty, paying daily life necessities and constant treatment. Moreover, there are thousands, if not millions, of elderly without providers, and there are less programs which support elderly fitness programs or urge elderly to do workout, while it can be admitted that the government does confer financial help but only with fundamental opportunities like living place and daily eating options. However, other aspects of healthy elderly life is often neglected.

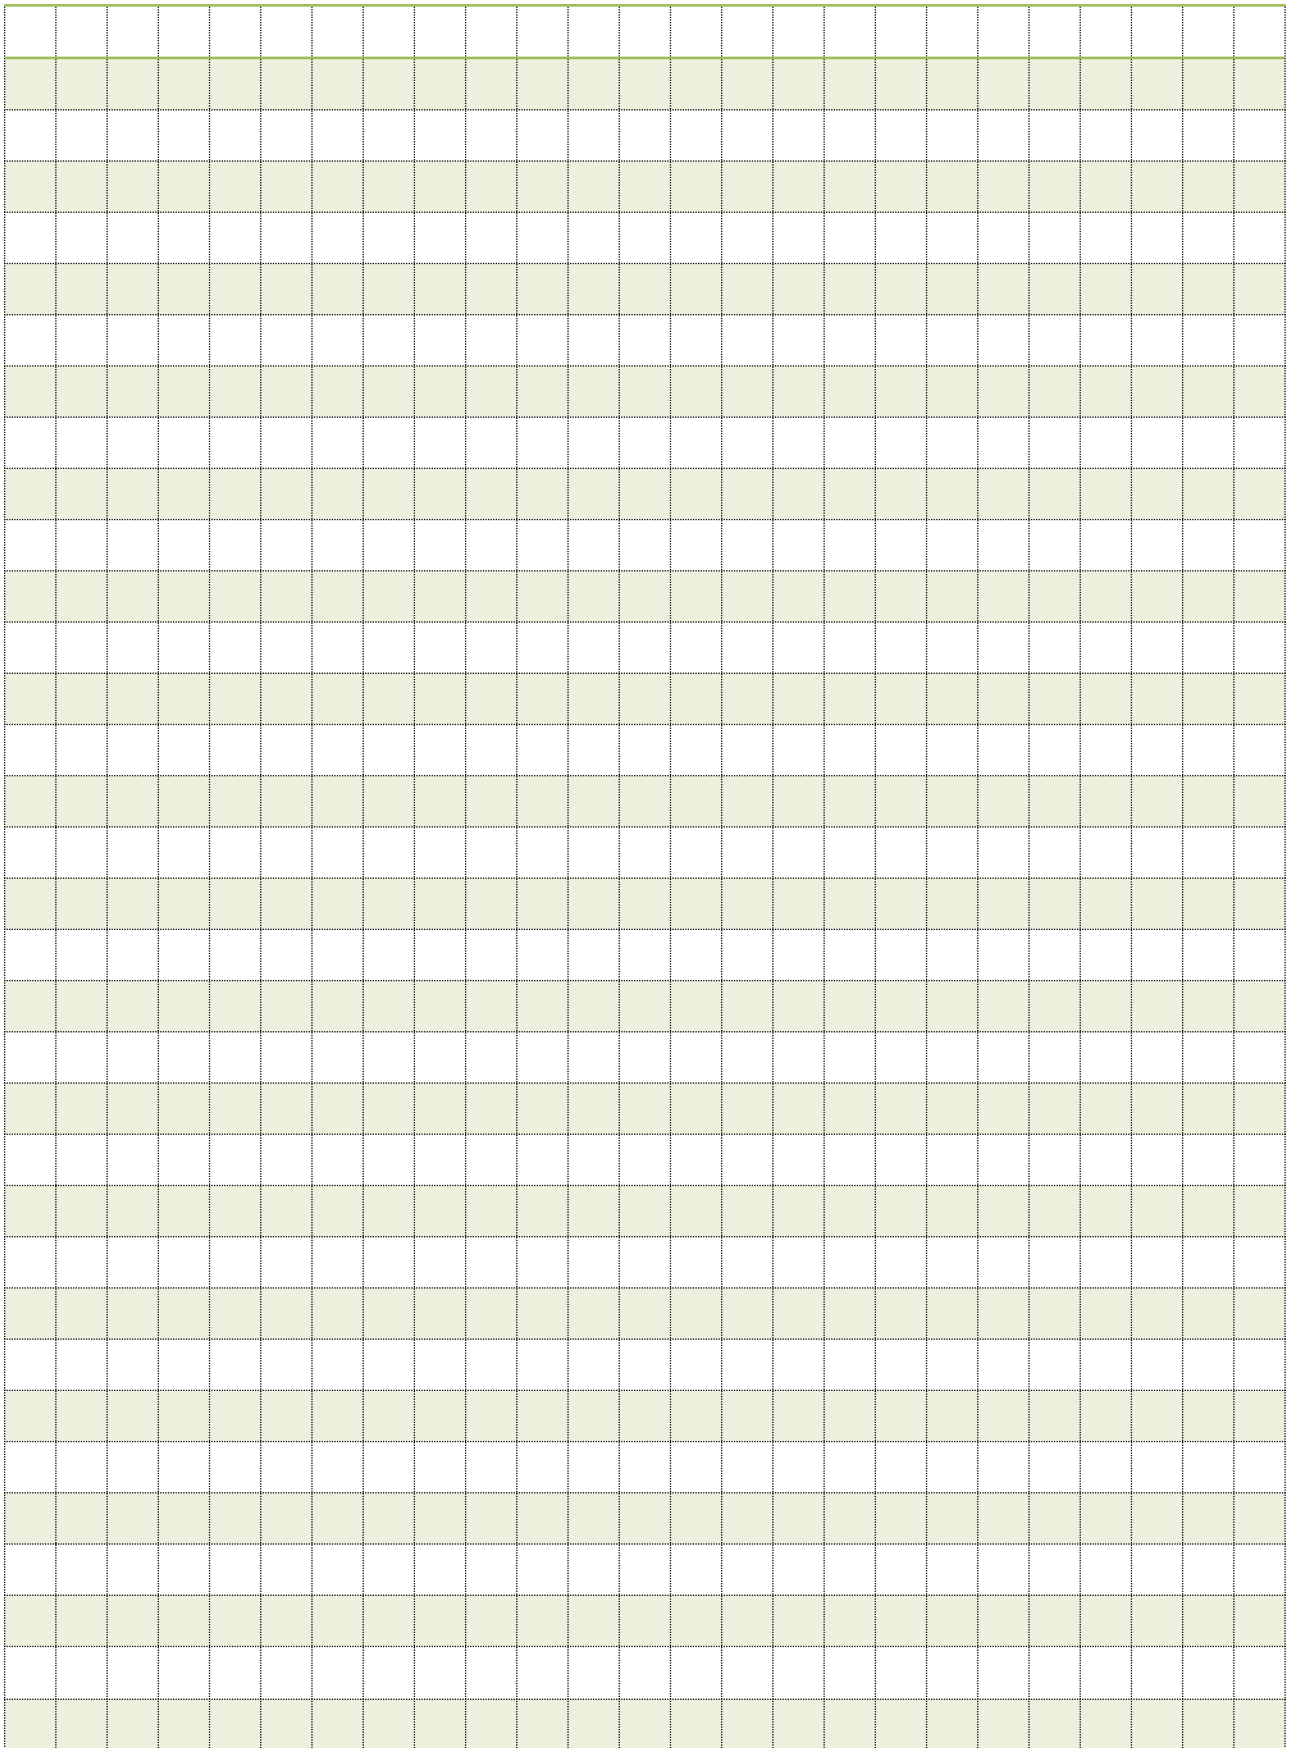

As a mitigation towards this issue, the government can provide advanced approaches to maintain an active lifestyle. For example, one way to do so can be developing individually tailored exercising programs, taking into the account of individual medical records. In other words, people who have lung diseases can skip parts of day to day exercises which can have a detrimental impact on these parts of the body. This can

noticeably reduce any concerns by seniors and induce them to initiate exercising on a regular basis. Take Germany - a country well-known for its rehabilitation programs - offers these particular recovery programs for its elderly population, and this country has experienced a moderate increase in their percentage of healthy elderly population ratio.

Further, more funding should be channeled towards aforementioned programs and even individual based funding should be given to the elderly, considering which sort of physical treatment might be necessary to them. This is mainly because around the world some governments are focusing heavily on combating diverse types of pollution or economic problems - in fact, these are important - while it should not be forgotten that the senior population is a vital layer of the community: many young population rely on the advice given by the valuable expertise of the elderly, and it is this population who usually keeps cultural traditions and customs and passes it on to the next generation. While there might be no supporters of them, it is also the moral duty of the government to be of a great deal of help to them.

In conclusion, seniors often lack healthy bodies or money to do workout on a regular basis, while these issues can be tackled with offering personalized exercise programs and financial aid. This will surely be a good investment towards a long term sustainability.

Test16

Writing task 1

You should spend about 20 minutes on this task.

The table below shows percentages of students with different attitudes for facilities in the university in the UK in 2008.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

	Very satisfied		Quite satisfied		Dissatisfied	
	Undergraduate	Postgraduate	Undergraduate	Postgraduate	Undergraduate	Postgraduate
Social facility	75%	65%	20%	25%	5%	10%
Study facility	85%	90%	8%	6%	7%	4%
Cafeteria	50%	40%	35%	25%	15%	35%

The report confers data regarding percentage terms of undergraduate and postgraduate students reporting 3 different attitudes, very satisfied, quite satisfied and dissatisfied, for university facilities in the UK in the year 2008 in the table.

In general, the satisfactory level towards all three amenities in the university was considerably higher among both undergraduates and postgraduates. However, there were more undergraduates showing higher satisfaction for social facilities and cafeteria than postgraduates, and vice versa for facilities catered for studying. In terms of dissatisfaction, the overall levels, however, were relatively lower among both categories: cafeteria ranked highest as a source of dissatisfaction.

The percentages of study facilities were the most marked among other two facility types. Almost all post and undergraduates relished these facilities (90% vs 85%). Remaining percentages were split among the category of mid-satisfied (undergraduates at 8% and postgraduates at 6%) and unsatisfied (7% undergraduates and 4% postgraduates).

Facilities for social activities were more satisfying compared to the other two among under and postgraduates (75% vs 65%). These percentages dipped significantly in terms of mid-range satisfaction percentages, down to 20% (undergraduates) and 25% (postgraduates), which then accounted for only 5% and 10% respectively as far as the amount of dissatisfied students were concerned.

Opinions of the cafeteria was neither strongly positive nor strongly negative - for instance, 50% very satisfied undergraduates versus 40% postgraduates. Both these figures were by 15 points lower in terms of fairly satisfied students percentages, while there was a huge disparity in the levels of dissatisfaction, with 15 % undergraduates 35% postgraduates.

257 words

Useful vocabulary items and language chunks from this report
considerably higher – much greater in degree or extent.

overall levels were relatively lower – general figures were comparatively small.
showing higher satisfaction – expressing a greater level of approval.
vice versa – the opposite relationship applies.
ranked highest as a source of dissatisfaction – was the main contributor to negative views.
the most marked – the most noticeable or prominent feature.
almost all respondents – nearly everyone involved.
remaining proportions were split among – the rest were divided into categories.
mid-range satisfaction – moderate or average level of approval.
dipped significantly – fell sharply or noticeably.
accounted for only a small share – represented just a minor portion.
more satisfying compared to – gave greater satisfaction than something else.
neither strongly positive nor strongly negative – balanced or neutral overall.
a huge disparity – a very large difference.
levels of dissatisfaction – degree or extent of dissatisfaction

[illegible]

Writing task 2

You should spend about 40 minutes on this task

The media should include more stories which report good news.

To what extent do you agree or disagree?

The outlook of people is mostly shaped by what news they read, and this does effect their daily life. With this fact, there is a view that more stories with good news covered should be shown by the media, such as radio, TV shows and newspapers. I admit that this is going to help nourish the spirits, yet I oppose to this idea for two

main reasons.

One of the most common supports towards 'only good news' trend is the measure taken to build physiological resilience. Oftentimes people who are exposed to negative narratives constantly see decreases in their emotional state - for example, declined stability and nurturing of chronic anxiety. This can be explained by the fact that a news environment dominated by uplifting stories reduce cognitive overload and emotional fatigue; as a result, there might be more communities with higher levels of optimism, hope, and emotional endurance, whose psychology becomes more resilient too, and increased productiveness and cooperation signs can be also observed. Plus, these people initiate being forward-looking towards their long-term lives. During national recovery periods after natural disasters or wars, countries, highlighting stories of rebuilding and cooperativeness, often exhibit faster community healing and volunteer engagement, for instance.

With that being said, I mainly put emphasis on the encouragement of negative news. Firstly, it leads to increased informed civic awareness. People - in order to solve issues within societies - should be exposed to some harsh truths of their environment rather than just negating them. This is important because reporting unpleasant truths about injustice, corruption and systematic failure urges people to gain knowledge necessary to demand accountability and reform, where awareness becomes the foundation of collective power and civic participation towards common societal problems instead of passive consumption. Therefore, we have investigative journalism which reveals unsafe working conditions, issues in some regions and corruption within governments sectors, leading eventually to the development of societies.

Further, negative narratives bring people to realistic world comprehension. This is mainly because positive ones usually distort reality and intellectual complacency, while exposure to the former helps to train some intrinsic traits such as critical

thinking and emotional maturity. People start to see the world at much bigger pictures and develop resilience made of realism, not just illusion, say, this can prevent public shock to an unexpected rise of societal issues, dealing with it in a strategic approach. Take news aggregators which report about economic downturns - they help families and households to plan in advance, adapt, and mitigate long-term damage.

In conclusion, it is true that prolonged exposure to negative news often do harm than good, where positive news can build emotionally resilient community; however, it is even more important to ensure public awareness about available problems and foster realistic world horizons.

Test 17

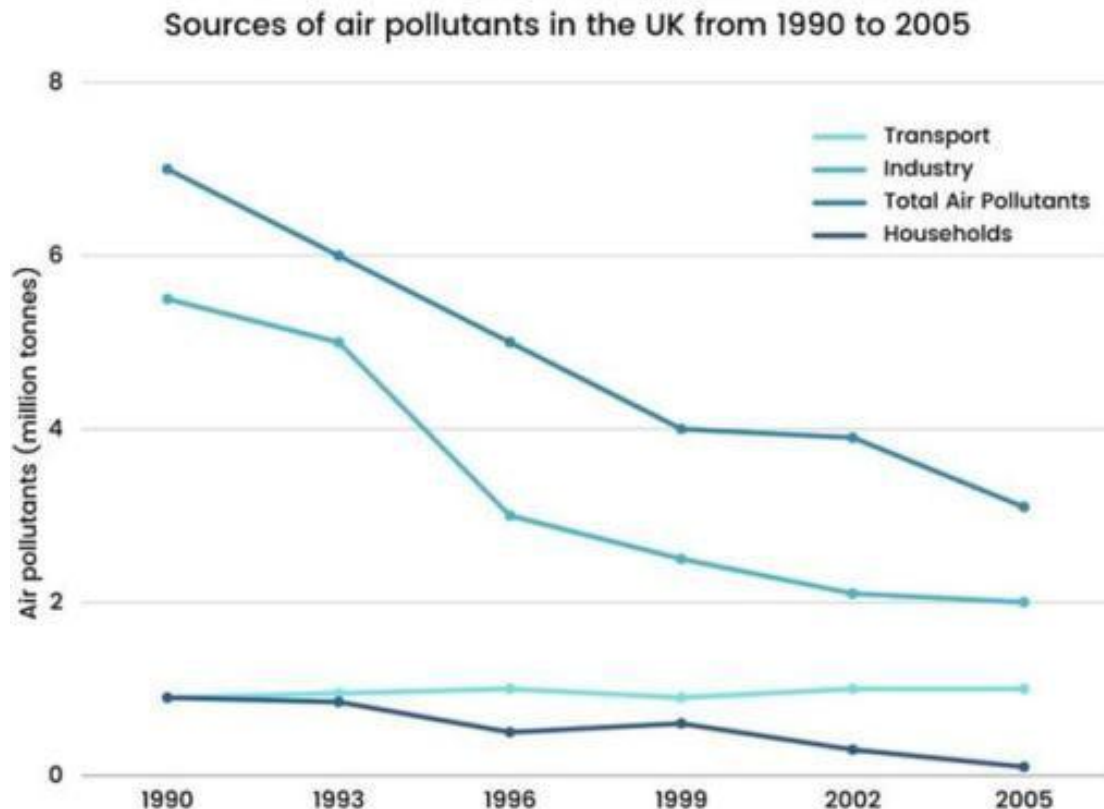

Writing task 1

You should spend about 20 minutes on this task.

The graph below shows different sources of air pollutants in the UK from 1990 to 2005

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report confers data regarding 4 main reasons for air pollution - Transport, Industry, Total air pollutants, and lastly households - in the UK between 1990 and 2005 in the line graph. Units are measured in million tones.

In general, the volume of pollution generated by all categories revised downwards, but transport during the period in the question, where the level of trends for households was the only category which showed the most subdued decline compared to that of Industry and total air pollutants - the leading cause of air pollution in the country. In contrast, Households seemed to have the least influence on the air among the three.

Focusing on the primary triggers of the polluted air, the all-time high results were responsible for the figure for total air pollutants, starting at around 7 million tones in 1990 and going down slightly to 4 million tones in 1999. This was even down to only 3 million tones in 2005 after a stability for 3 years from 1999. Another common factor was Industry, which contributed to nearly 6 million tones of pollutants in 1990, the

result of which declined significantly to just 3 million tones in 1996, and then there was a slowly declining trajectory towards a meager 2 millions till 2005.

Other air pollutants, yet with insignificant impact, were transport and households. The result of former was mainly sustained at around 1 million tones during the whole period. The latter, once stood at an identical figure as the former category from 1990 to 1993, went down to a trough of a half million tones next interval and hovered around till 2002 before it had edged down to nearly nothing in 2005.

281 words

Useful language chunks and vocabulary from this report

revised downwards – adjusted to a lower level over time.

the most subdued decline – the smallest or least noticeable decrease.

leading cause of air pollution – the primary source responsible for pollution.

least influence on the air – minimal impact on air quality.

focusing on the primary triggers – concentrating on the main causes.

all-time high – the highest level ever recorded.

going down slightly – decreasing by a small amount.

after a period of stability – following a time with no significant change.

declined significantly – dropped sharply or noticeably.

slowly declining trajectory – a gradual downward trend over time.

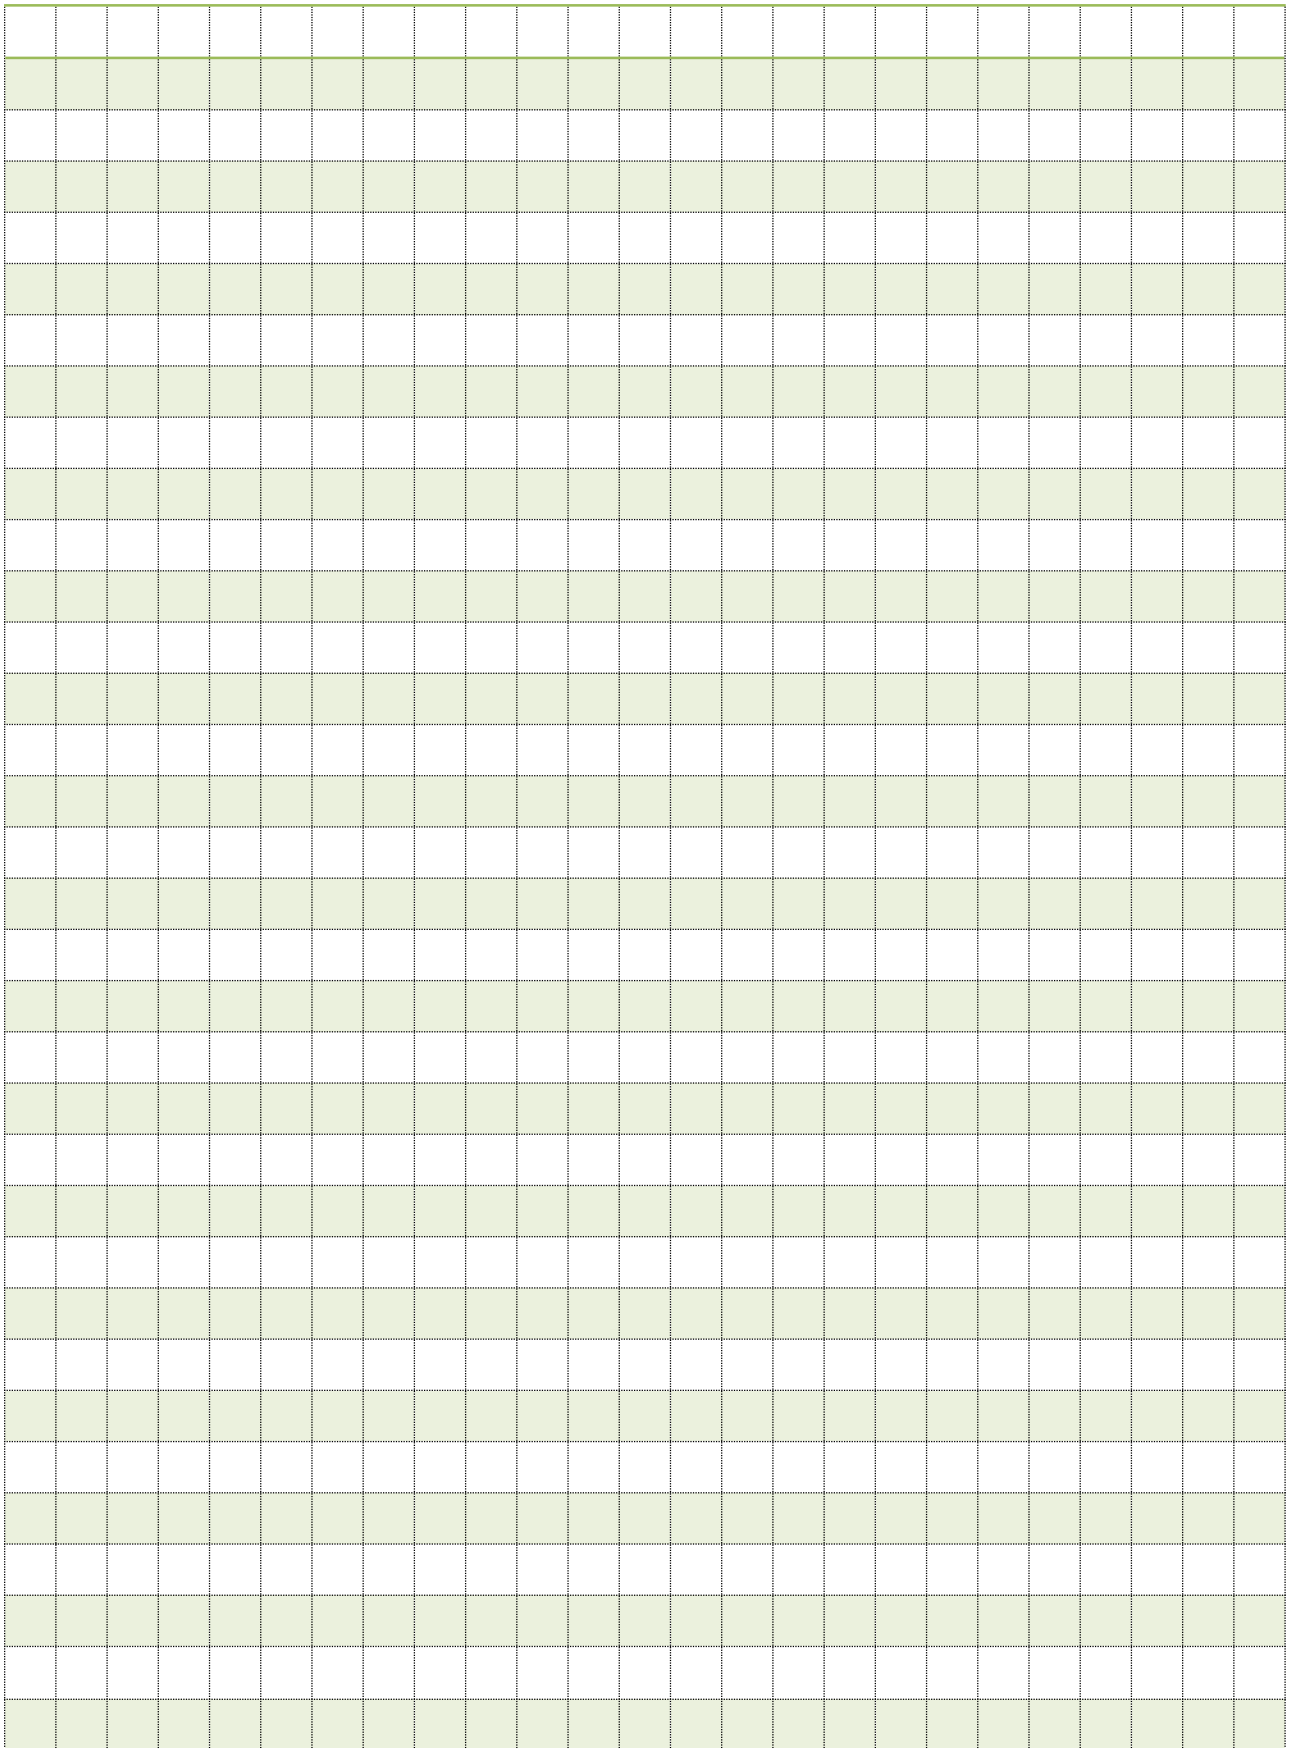

a meagre X million tonnes – a very small amount (used for emphasis).

with insignificant impact – having minimal effect.

mainly sustained at – largely maintained at the same level.

went down to a trough – fell to the lowest point.

edged down to nearly zero levels – decreased gradually to almost nothing.

Writing task 2

You should spend about 40 minutes on this task

Employers should give their staff at least four weeks holiday every year to make them perform better at their jobs.

To what extent do you agree or disagree?

Generally, there are a number of measures to enhance the performance of workers, and there is a view that providing a four-week holiday can do the trick in this regard. However, I do admit the notion behind this, yet I oppose to this idea as it also entails some drawbacks, such as reducing overall productivity of the company and unequal impact across diverse sectors.

One of the the most primary reasons of introducing four weeks of holidays is an intrinsic factor that lies behind it. Such extended holidays can help to boost overall work ethics and loyalty within the company. This is mainly due to the fact that employees may initiate feeling valued and more satisfied with their positions in their work settings, which might lead to increased work output and lower employee retention in the company in the long run - the most important considerations of the employers - while better

work and life balance can be achieved, where employees can have a chance to spend more time with their family members. Perhaps, this is why many companies in developed countries gravitate towards such holiday-options, being aware of its irreplaceable benefits.

I, however, assume that these prolonged holidays can show also adverse effects to mainly the company. While I admit that it is somehow a promising shift to boost performance, I also believe that it can reduce output of the company and put it in the financial strain. During extended annual leave of workers, say, if the company is in the agricultural sector, there might happen a greater loss of manpower. This can be observed when work-flow disruptions and slower operations exist because of longer

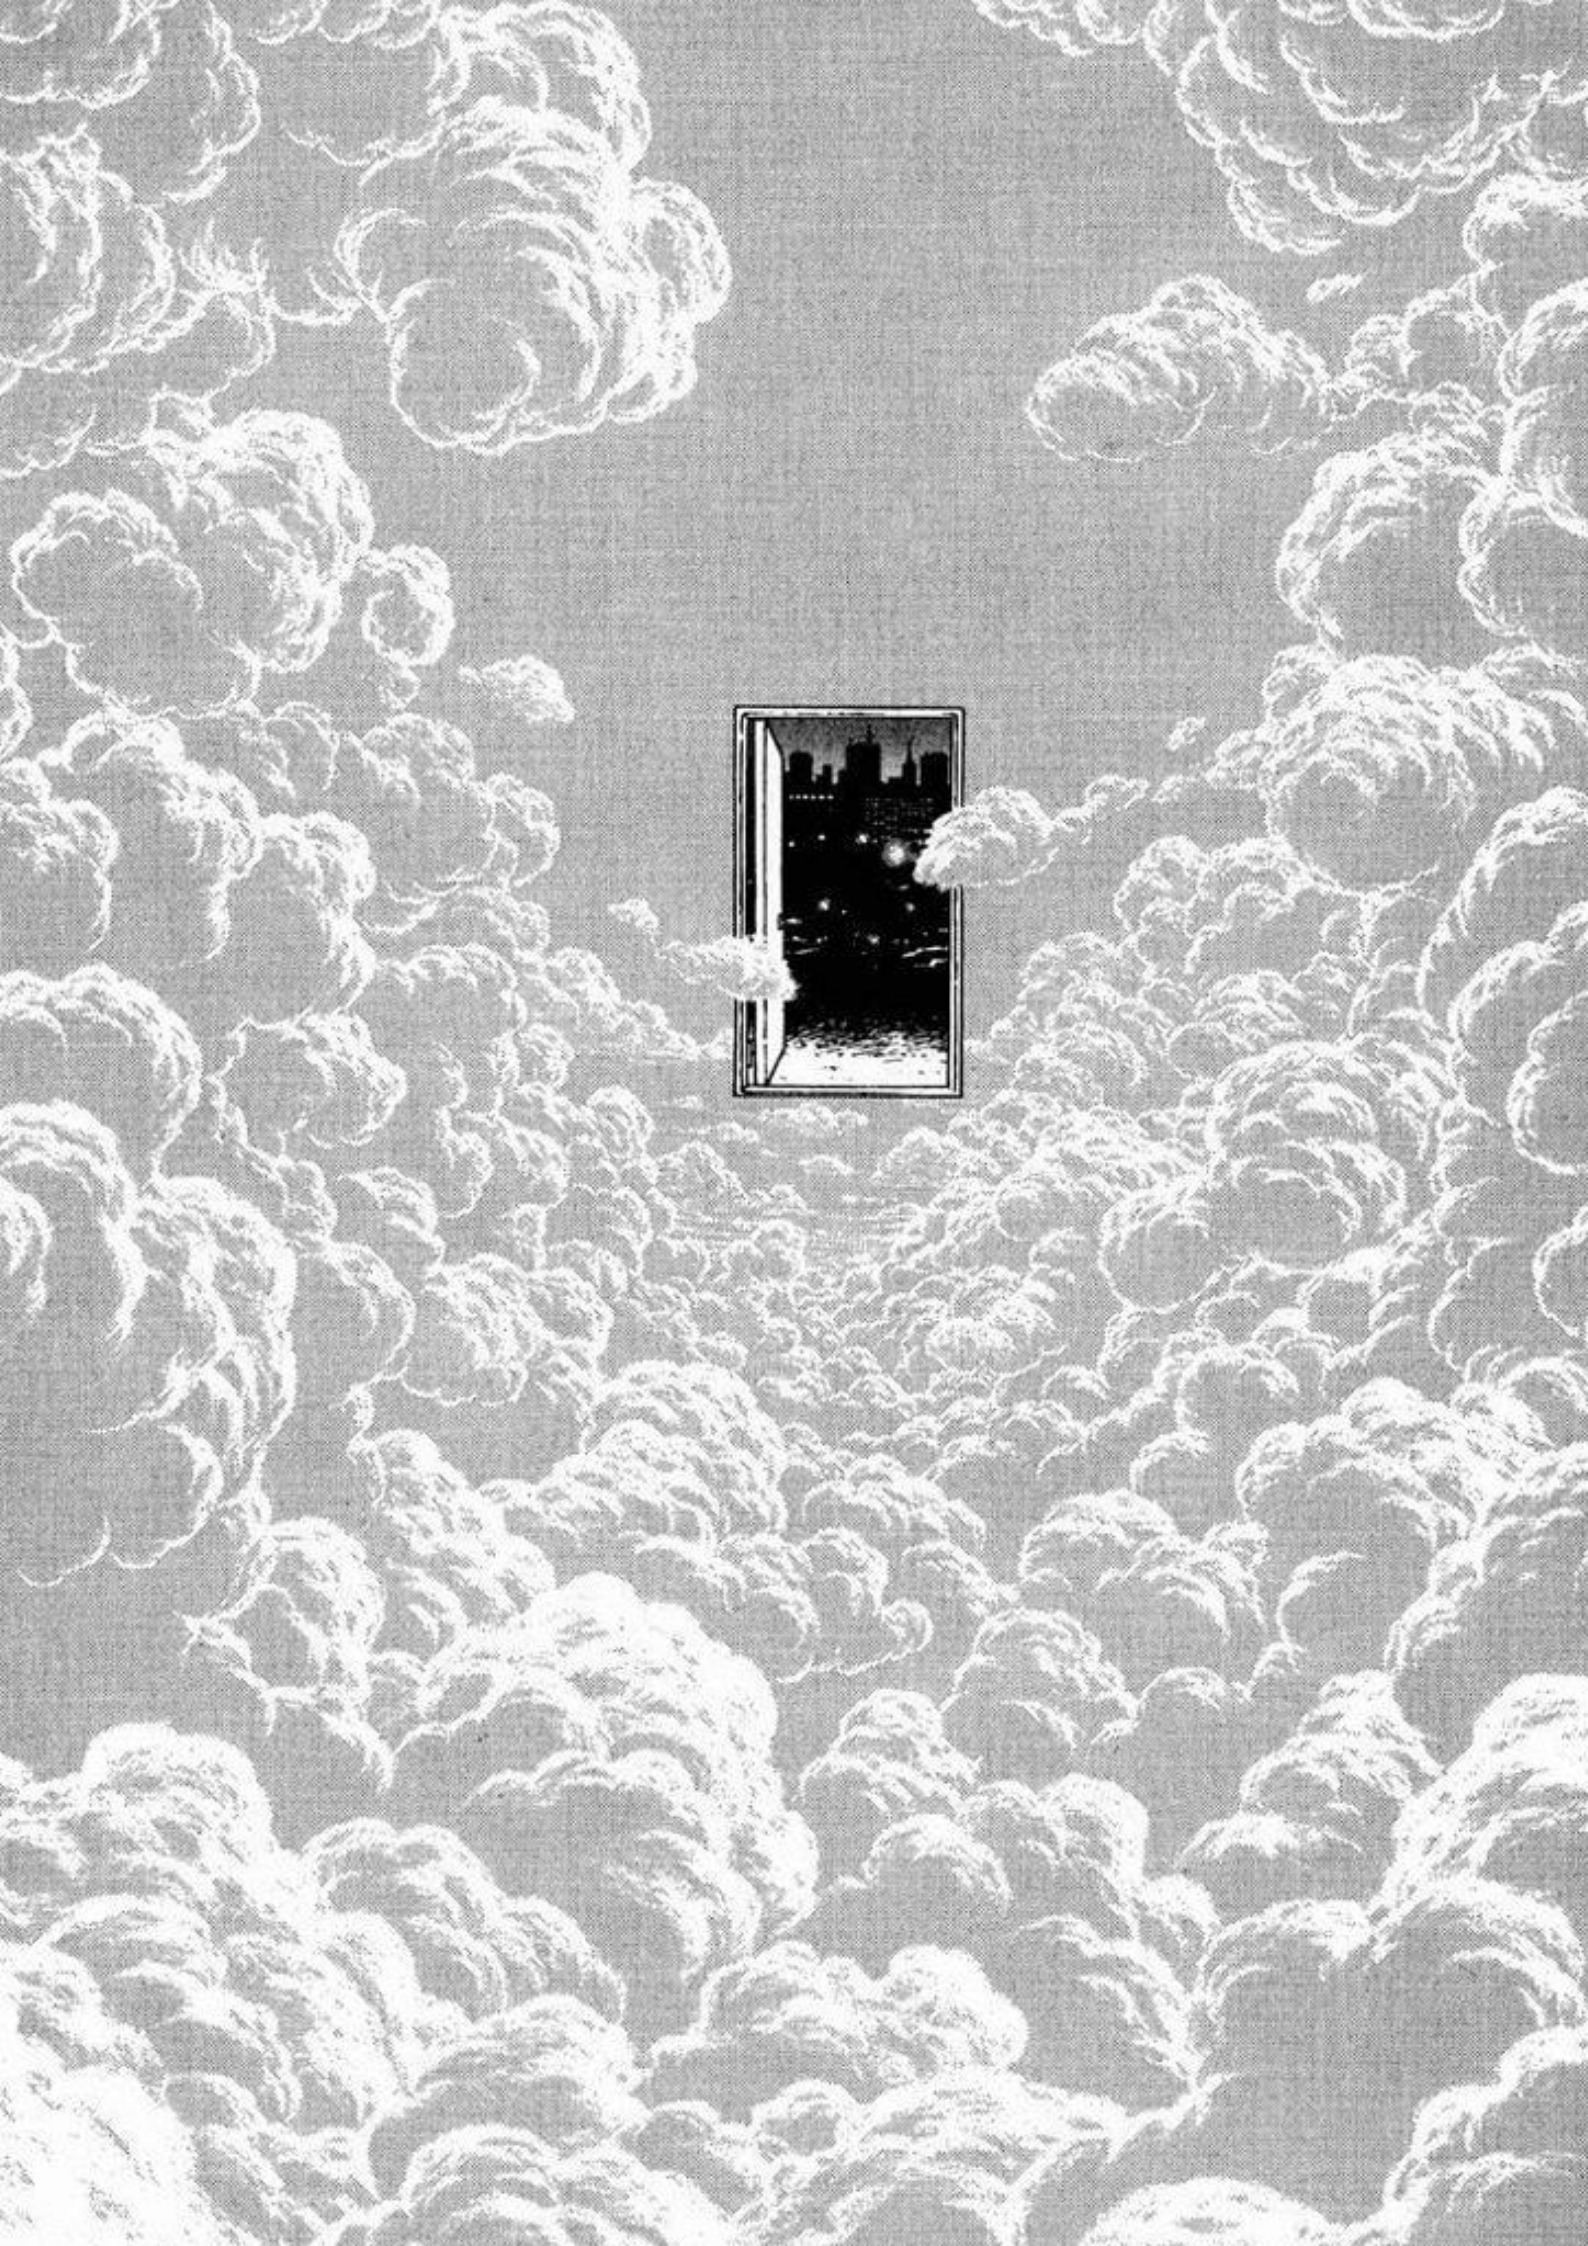

staff absences. Results in such a scenario are vivid: lower output, higher labour costs and reduced profitability. Small enterprises usually struggle during peak seasons when there are several employees taking longer holidays, for instance.

Further, longer holidays can turn out favorable to not all sectors of employment equally. While these increased holidays can benefit to government sectors such as education, politics and services- there employees are more likely to suffer from job-related stress and burnout-, they cannot do so to agriculture and economics. These areas oftentimes operate during at different timetables and are reckoned to be the cornerstone of the economy, where any delays in the performance can severely influence the country's productivity and place it in a difficult condition. Plus, these delays can lead to increased customer dissatisfaction and lower quality of services. Therefore, most of the health-care and transport sectors, for example, deter prolonged absences of employees within workplaces, where extended leave cycles cause issues such as delayed surgeries of patients or crowded stations and passenger dissatisfaction due to the lack of drivers.

To conclude, prolonged holidays do represent increased performance of workers in the company because of greater work and life balance and satisfaction of employees, yet it is undesirable for some factors, since it cannot be established in all work places evenly and may show reverse outcomes sometimes.

[illegible]

Test 18

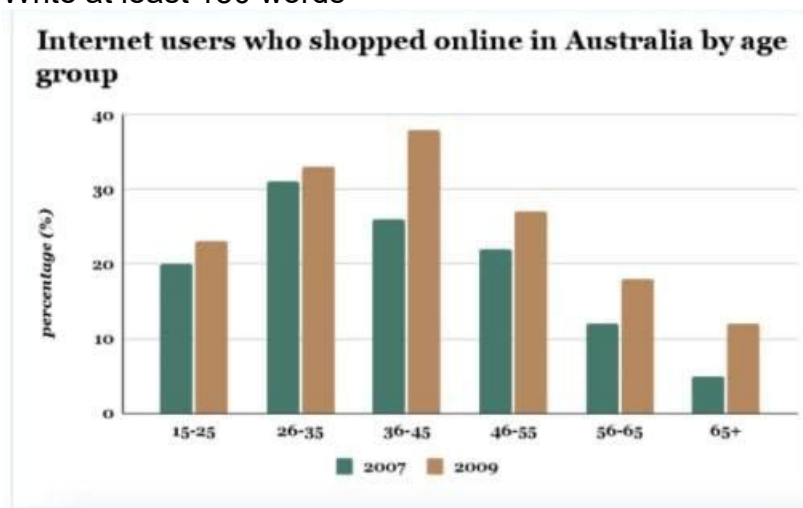

Writing task 1

You should spend about 20 minutes on this task.

The graph below shows the percentages of internet users who shopped online in Australia by age group.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report outlines data regarding changes in the share of internet users shopping online in Australia in 6 age groups in the years 2007 and 2009 in the bar graph. Age groups mentioned in the report were 15-25, 26-35, 36-45, 46-55, 56-65 and

lastly those over 65 years old.

As can be seen, all age groups experienced an increase in online shopping participation, where the most substantial shifts in online shopping habits were observed in the proportion of 36-45 and above 65 age brackets during the period in the question, while there were also noticeable, yet not as much as pronounced, changes in the shares of other age groups. People who engaged in shopping online the most was those around 36-45 years old, whereas the reverse was true for the eldest users.

Focusing on the youngest age brackets, around 20% of users at their 15-25 years shopped online in 2007; this was 2 points lower than the share in 2009. In 2007, 30% of online shoppers in the age profile of 26-35 purchased items online, leading the chart, the share of which then rose slightly by 2 points in 2009.

Middle aged internet users in 2007 showed rather moderate involvement in online purchasing, where the share of 36-45 year-old users accounted for 25%, whilst this age profile was the most common people who bought items online in 2009. However, a bit older people at 46-55 years old formed relatively lower proportions in both 2007 and 2009, increasing from nearly 20% to 28% respectively.

Online shopping habits were not quite favoured by senior citizens, although the figure for these age groups exhibited an increase from 2007 to 2009. In the latter year, around 18% of 56-65 aged users involved in online purchases, and this was nearly 5 points up from the former year. One of the most marked shifts in the

proportion of those who did online purchases happened to the eldest age group (over 65 years old): a 5%-result in 2007 surged up to 12 % in 2009.

336 words

Useful language chunks and vocabulary items from this report:

experienced an increase — showed a rise in numbers.

the most substantial shifts — the biggest or most significant changes.

observed in the proportion of... — noticed in the percentage of a group.

the reverse was true for... — the opposite pattern appeared in another group.

Focusing on the... age brackets — when we look specifically at a particular age group.

accounted for 25% — made up or represented 25%.

rose slightly — increased a little.

leading the chart — having the highest position in the graph.

relatively lower proportions — smaller percentages compared to others.

formed... proportions — made up certain percentages.

exhibited an increase — showed a rise.

not quite favoured by... — not widely preferred by a group.

one of the most marked shifts — one of the clearest or strongest changes.

surged up to... — rose quickly and significantly.

involved in online purchases — took part in online buying.

Writing task 2

You should spend about 40 minutes on this task

The unlimited use of cars may cause many problems.

What are those problems?

In order to reduce the problems, should we discourage people to use cars?

To what extent do you agree or disagree?

At present, roads are filled with transport such as cars, buses and heavy trucks more compared to the past few decades. To prevent environment issues a huge amount of cars on roads are due to cause, it is favorable to put limitation on them, while I also believe that discouraging people from using their beloved cars is somewhat an action of unjust.

One of the worst downsides of unlimited use of cars is the possible detrimental impact on the environment. It is true that the most amount of carbon footprint account for the use of cars on roads, which is rather a silent killer. While most people blame factories or human footprint, such as waste and artificial fires, as a reason for pollution, cars are neglected as their effect is rather long term and slow. However, in the long run it is going to be built up in noticeably bigger scale, and it may effect lives of millions at least, and our future generations would be victims of this, for it is proven that carbon dioxide and other lethal gases emitted by transport can have severe outcomes on the ecology, resulting in air pollution and diverse chronic illnesses such as asthma and respiratory illness. Take Tashkent - the capital of my home country - which is experiencing a number of problems due to the heavy transport volume, where the poor air quality is the most considered issue.

Admittedly, the discouragement of car uses can entail some tangible benefits. For example, aforementioned types of illnesses can be initial issues dealt with the help of this measurement, thereby improving the quality of air as well as life in most urban areas with the high density of population such as London, New York and Tokyo, where the most significant amount of issues with cars are observed. Plus, less cars on roads can also mean less traffic congestion, which can be a rather promising advantage of the initiative, as now many urban regions suffer from heavy traffic on roads. This oftentimes lead to delays on some important events and meetings in the lives of the majority. Such an initiative was promoted in the city of Copenhagen years

ago, where the use of bikes instead of cars was strongly motivated since this type of transport is both environment-friendly and could mitigate traffic-related issues.

Having said that, I also remain convinced that it is irrational to minimize the use of cars as it can be seen unjustifiable by some. This action can seem something like the limitation of freedom to people, while there are millions of car enthusiasts. As a result, there might arise some public dissatisfaction and protests against this rule, leading to more societal conflicts in the future. Moreover, there are also diverse types of professions which rely on cars like car service companies. The income of employees in these professions might be cut off due to this motion. Therefore, it is advisable that before legislating rules that deter car usage, we should also reckon adverse effects it might bring about, and perhaps finding the solution to these effects can be a wise step like conferring employment to those who can lose their jobs as a result of the legislation.

In conclusion, because of how noticeable the influence of cars on the environment and one's well-being is, we should impose measures to reduce car usage, of course. However, this cannot be done unless after effects of this legislation is ensured.

Test 19

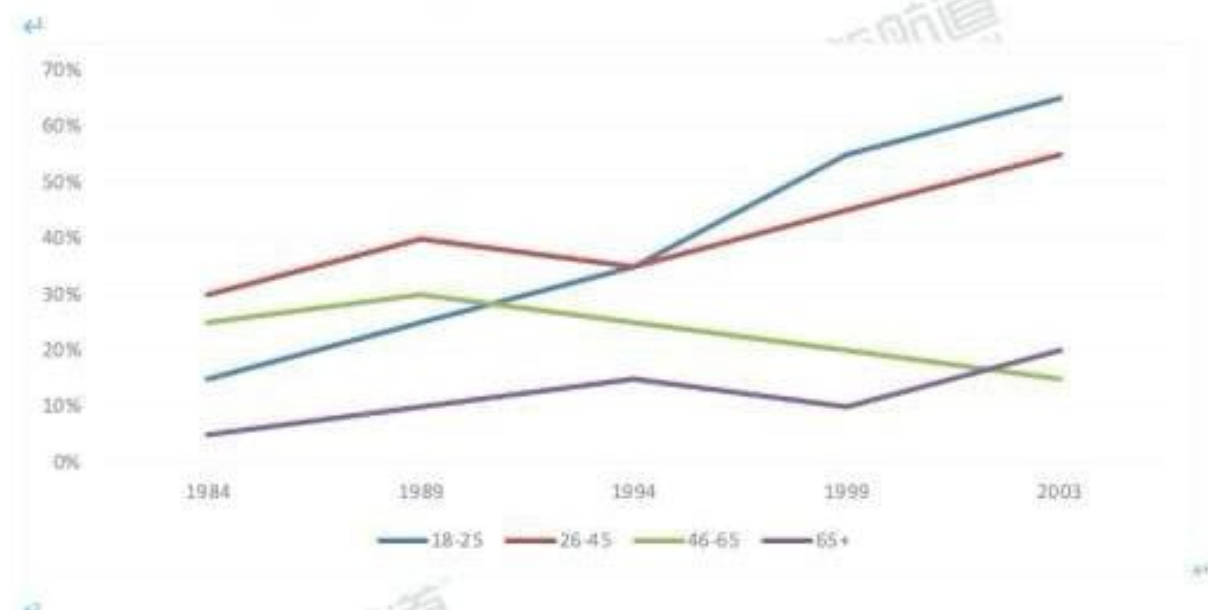

Writing task 1

You should spend about 20 minutes on this task.

The graph shows information about the percentage of people visiting GYM once a month or more between 1984 to 2003.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

The report provides information about changes in the share of 4 age groups who visited gym once a month or more from 1984 to 2003 in the line graph. Age groups mentioned are 18-25, 26-45, 46-65, and lastly over 65 year-old brackets.

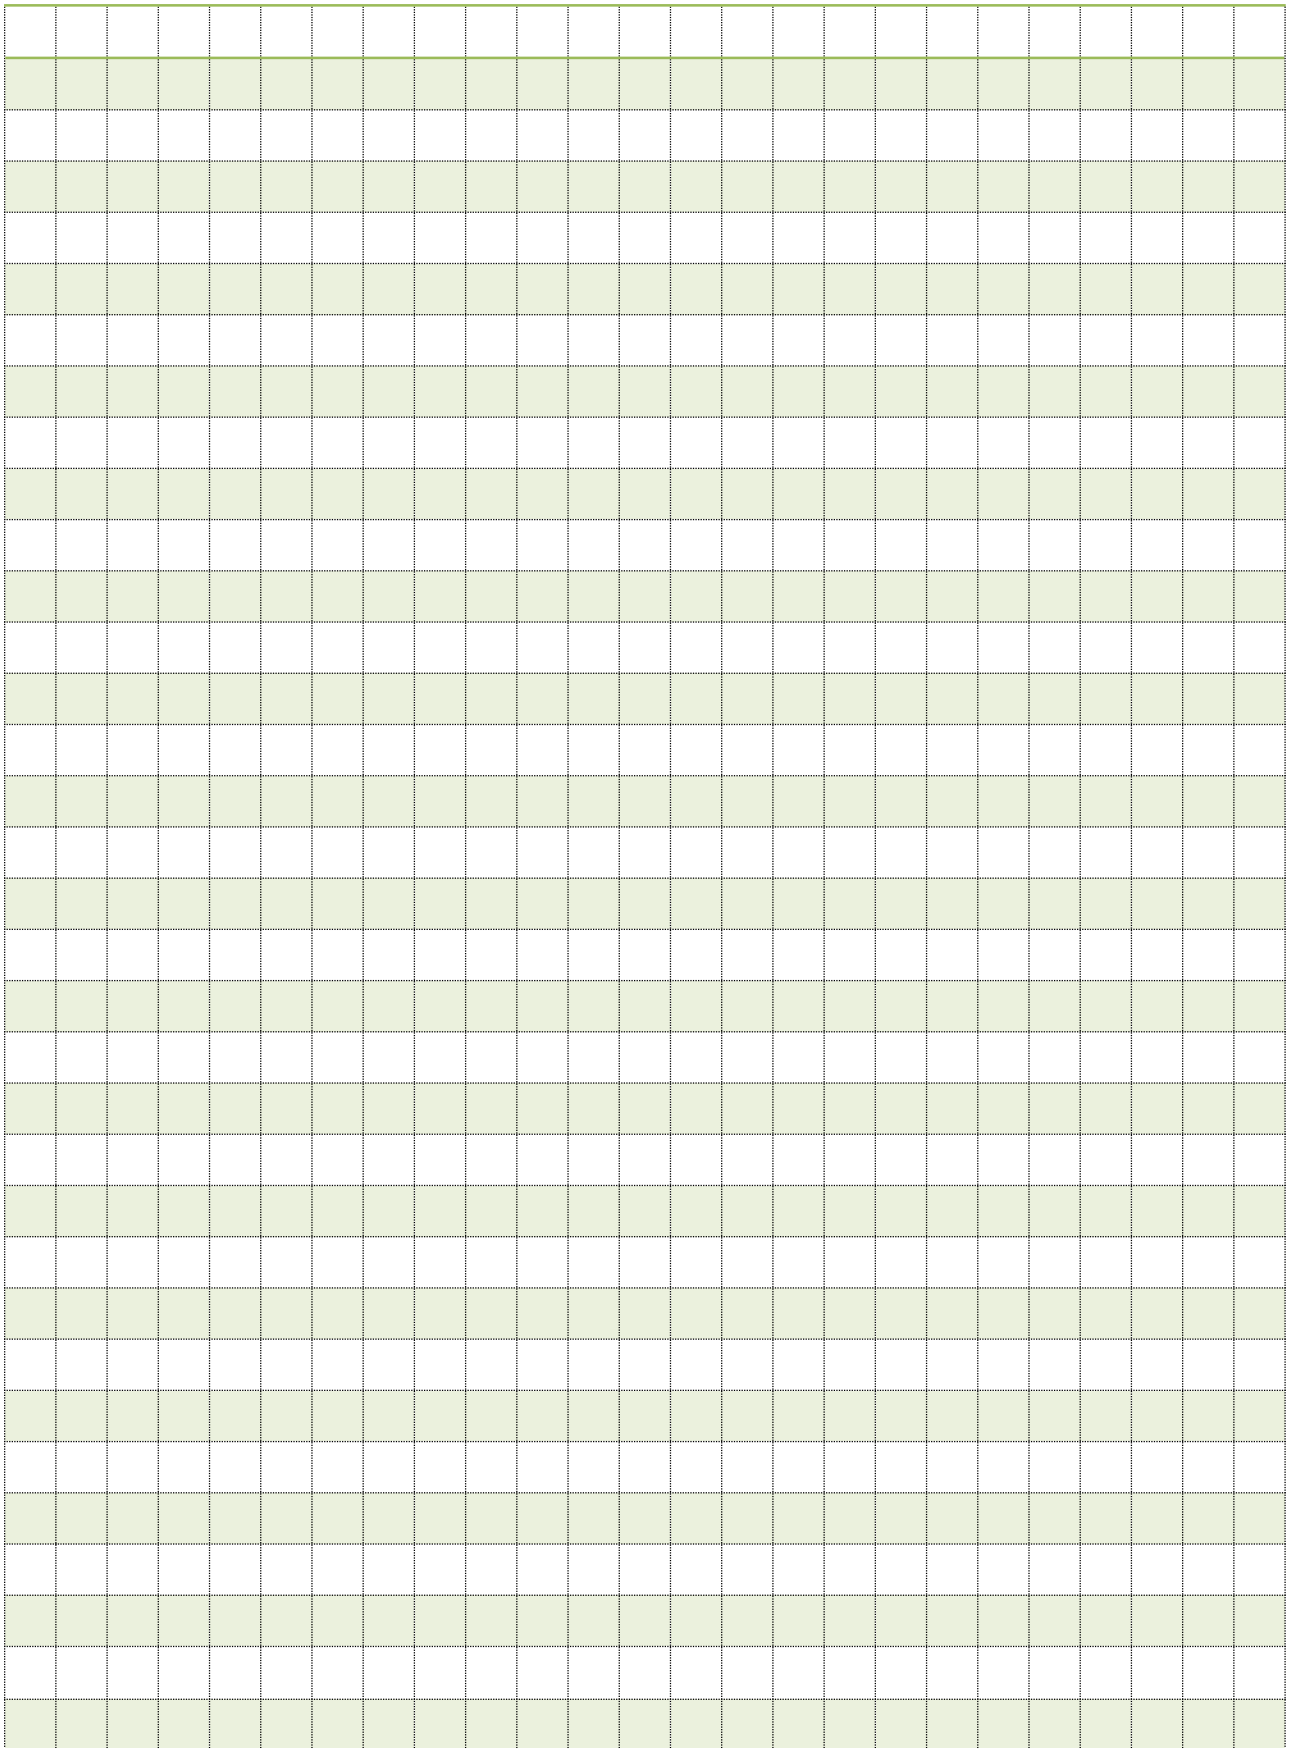

Generally speaking, the attendance ratio to the gym rose, albeit at varying degrees, across all age groups, except for those aged 46-65 - the age profile with the least involvement in gym activities over the period. It was the youngest age profile, however, which showed relatively higher percentages of gym goers.

It is evident that visiting gym was quite popular among young individuals. For instance, starting at 15% in 1984, the figure for 18-25 year-old people surged at an unprecedented rate up to nearly 70% in 2003: it accounted for the all-time high share of gym visitors in the chart. As for another young age profile (26-45), after going up from 30% - the highest share of gym goers in 1984- to 40% in 1989, There was a marginal decline to 35% in 1994. This, however, quickly managed to recover and experienced a significant rise to 50% in the end: this age group came a close second in terms of gym engagement in that year.

Moving on the results of senior attendees, around 25% 46-65 years old elderly visited gym in 1984, which edged up to nearly 30% in 1989. From this point on, attending the gym started to go down for this age profile at a noticeable level till 2003, recording only 15% of gym goers. The eldest age group (above 65) recorded the lowest participation figures from the period 1984 to 1999: despite this, participation among

this cohort fluctuated: it rose from 5% to a peak of 15% in 1994, before declining back to 10% in 1999. By 2003, The amount of elderly gym attendees at above 65 years old had revised upwards and exceeded that of previous age group, up to 20%.

Writing task 2

You should spend about 40 minutes on this task

Many believe that it is important to protect all wild animals, while others think that it is important to protect some, not all of them.

Discuss both views and give your opinion

To what extent do you agree or disagree?

Preservation priorities over different species have been a matter of the debate among individuals, with some arguing that it is vital to protect all species without exceptions due to moral value, while there are those who support the protection of certain, more important, species. Personally, I support the latter view for reasons: we have limited funding, and the former view is impractical.

On the one side, it is somehow rational to assume that we are responsible to preserve all wild animals. This idea

is put forward because we, as intelligent beings, possess duties over other species on the Earth. Plus, thanks to what 21st century is able to provide we have all opportunities such as technological and biological ones to take care of all species such as those which are losing their habitat due to human actions. Speaking of this, At present human environmental footprint is leaving most animals in vulnerable state: they lose their local habitats because of agriculture or manufacturing or become victims of hunting for their fur or bones. Once thought common, elephants now turn out to be on the edge of extinction, and they are great examples of human hunting results. That is why we do not sure know for now which animal can die out in the future, and for the long term sustainability of the animal kingdom we should preserve all species, considering we have moral and ethical values in front of these animals whether they are becoming extinct or not.

With that being said, I remain in the view that it is impossible to safeguard all species on the Earth. First of all, we should consider that funding towards animal preservation projects is finite. Having already several issues of greater importance like global warming and pollution, we are not in the state to channel all the money on this regard.

For it is more possible to determine the preservation of which animals is the priority for us, where some animals which are overabundant or can have lesser importance not only for us, but also for the environment should be overlooked in the list. For instance, it is irrational to put money on the preservation acts of invasive species or parasitic insects - these either damage ecosystems or humans.

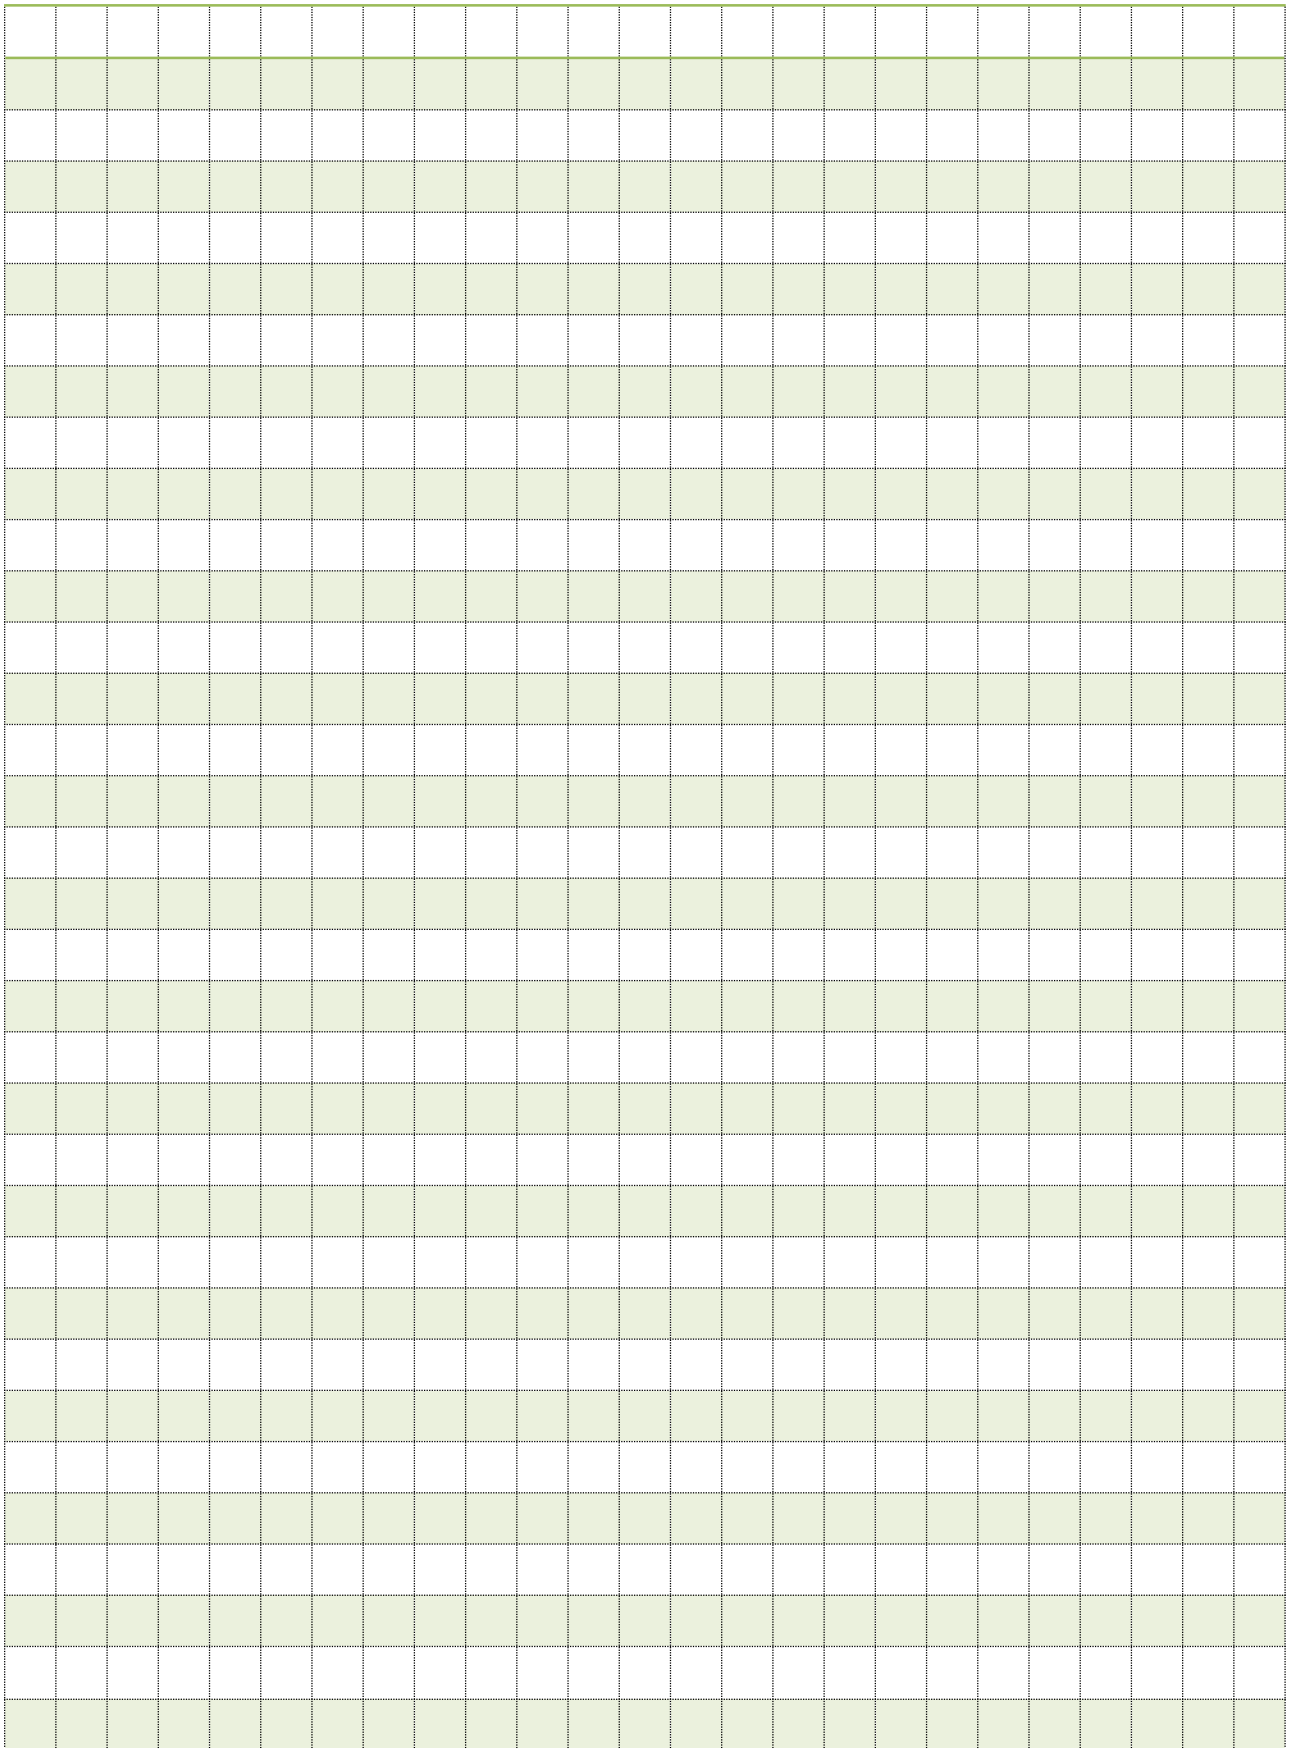

Further, the idea of preserving all species, taken in the logical sense, is almost unachievable. As aforementioned, even we have all possibilities to preserve all species, people cannot do so for all species at the same time. It is rather more feasible to set up targeted conservation plans, where focusing on particular endangered species - in this case these would be pandas, for instance - should be the first action, and then going down the list can do the trick. Logically, safeguarding all species, regardless of their conservation statues, is somewhat a impractical movement.

In conclusion, although our opportunities in biology and technology can allow us to protect all wild animals taking into account of moral duties, it is still impossible to do so and a financially difficult task to accomplish, where I believe targeted animal preservation and skipping some animals of less ecological benefit would be reasonable.

520 words.

Useful language chunks and vocabulary from this essay

preservation priorities — deciding which species should be protected first
matter of debate — topic people argue different opinions about
moral value — ethical importance or worth
more important species — animals with higher ecological or human value
limited funding — not enough money available
impractical view — idea that cannot realistically work
intelligent beings — humans with reasoning ability
duty over other species — responsibility toward animals
technological and biological opportunities — scientific tools available to help
vulnerable state — weak condition, easy to harm
on the edge of extinction — very close to disappearing forever
environmental footprint — human impact on nature
finite resources — limited amounts available
overabundant species — animals existing in excessive numbers
lesser ecological importance — low contribution to ecosystem health
invasive species — animals harming local environments
parasitic insects — insects living by harming hosts
targeted conservation plans — focused protection strategies
endangered species — animals at high risk of extinction
impractical movement — action unlikely to succeed

Test 20

Writing task 1

You should spend about 20 minutes on this task.

The table below shows the total population and the proportion of males and females aged 15 and aged 75 in the UK from 1911 to 2011.

Provide an overview of the information by identifying and describing the key details, and include comparisons where appropriate.

Write at least 150 words

	1911	1961	2011
Total Population (millions)	36.1	46.1	56.1
% people aged 15	1.86%	1.48%	1.23%
Males	334,200	349,400	354,400
Females	335,700	333,900	333,700
% people aged 75	0.23%	0.55%	0.70%
Males	34,100	160,200	181,300
Females	47,400	254,900	210,100

The report outlines changes in the total population ratio, and the proportion of men and women with the separate data for 15 year-old and 75 year-old people in the UK between 1911 and 2011 in the table.

In general, the country saw an upward trend in its population ratio, with

elderly population also increasing: female elderly individuals comprised a noticeable part in this regard. In contrast, The proportion of young individuals declined, yet somehow that of young males showed the opposite.

Focusing on the figures regarding total population changes, it significantly surged over the period. In 1911, only 36.1 million people were living in the UK, which then rose by 10 points in 1961, to 46.1 million. Plus, the same change number had occurred in 2011 - there were total 56.1 million UK citizens.

Regarding the shares of 15 year-old age profile, only 1.86 % comprised the total population, the result of which moderately declined to 1.48% in 1961 and even more to 1.28% in 2011. As for male figures of this age category, despite an overall downward trend, this gender group showed an increase from 1911 to 2011 (334.200 vs 354.400). Meantime, the figure dipped slightly for young female population of the country, starting at 335.700 in 1911 to 333.700 in 2011. The most pronounced decline happened from 1911 to 1961, by 1 800 as it was for 15 year-old males.

As for people aged 75, they tend to account for lesser proportions of the total, the percentage of this age category formed 0.23% in 1911, and it edged up to 0.55% in 1961. 0.70% was the result of this category in 2011. Firstly, there were more marked elderly women in any year compared to men, accounting for 47.400 in 1911 and 210.100 in 2011, while the index of men was at 34.100 in 1911, rising all the way up to 181.300. As can be seen, these both sex categories exhibited rises over the whole period.

325 words

Useful language chunks and vocabulary item from this report:

saw an upward trend

population ratio

comprised a noticeable part

the proportion of young individuals declined

significantly surged

regarding total population changes

moderately declined

an overall downward trend

dipped slightly

the most pronounced decline

tend to account for lesser proportions

edged up

a more marked elderly women figure / more marked trends

these categories exhibited rises

as can be seen (a high-value coherence phrase)

[illegible]

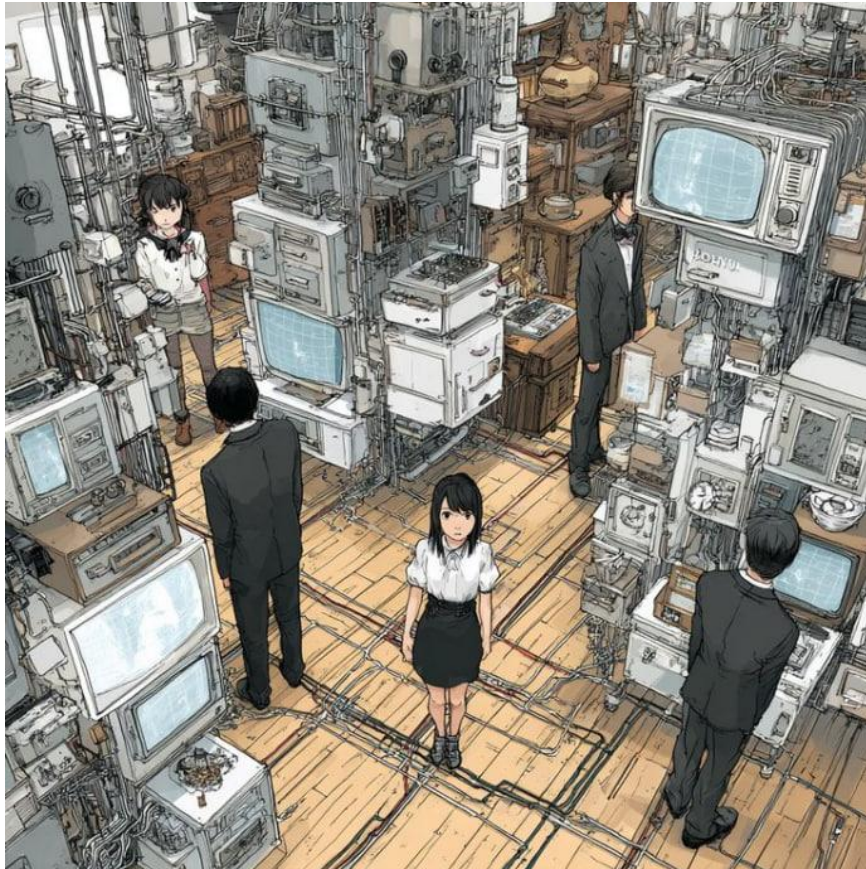

Writing task 2

You should spend about 40 minutes on this task

Some people believe that directors of large organizations receive much higher salaries than ordinary workers. Some think this high income is necessary, while others believe it is unfair.

Discuss both these views and give your own opinion.

To what extent do you agree or disagree?

It is commonly believed that the pay ordinary employees receive is significantly lower than that of company directors, and this is thought to be unjust to these small position workers. It is true that the importance of ordinary workers is great due to commitment and hard work they represent. I, however, would side with those who assume the high income of directors is justified, for they play an intrinsic role within the company, and it is replaceable.

Workers tend to receive low salary for the work they do in different companies widely around the world. This is somewhat wrong, because even so-called huge companies give only around a couple of thousand dollars to their employees, who otherwise may serve an important role in the company, while their roles are oftentimes overshadowed. In fact, there is no such insignificant positions in any company. Ensuring good pay to employees might be vital to improve overall work aesthetics and ensure higher incidence of employee retention, which is oftentimes a leading factor why most workers tend to switch positions between companies. For instance, Germany - a country well known for its employee care - maintains equal rights and a salary amount across all positions of work, of course with some exceptions to be seen.

Having said that, I remain convinced that a sizable income of senior positions in companies is rational for several factors, among which the fact that their role has more impact on the company's future as a whole than any junior positions is the most important justification. This is mainly because the most influential decisions are made

by these individuals in the company, and they also bear more responsibility over the outcome of this action as opposed to low position-workers. If any adverse outcome is to be seen, this is going to mostly impact these certain individuals. Therefore, ensuring good pay to them is reasonable to cover the cost of tension at work and responsibility they feel.

In conclusion, to maintain healthy working environment and satisfied workers it is vital to ensure equality in terms of income among workers, yet I feel that it is even far favorable to confer lucrative income for higher positions in the company, as their roles simply cannot be replaced.

373 words.

Useful language chunks and vocabulary from this essay

Significantly lower — much smaller in amount.

Thought to be unjust — considered unfair.

Small-position workers — employees in junior or low-ranking roles.

Commitment and hard work — strong dedication and effort.

Side with those who assume — agree with the people who believe.

Justified income — salary that is reasonable or valid.

Intrinsic role — an essential, built-in function.

Low salary — insufficient payment for work.

Serve an important role — have a meaningful, necessary function.

Oftentimes overshadowed — frequently ignored or undervalued.

Ensure higher employee retention — help keep staff in the company longer.

Switch positions — move to another job or role.

Well known for its employee care — famous for treating workers well.

Maintain equal rights — keep fairness and equal treatment.

Sizable income — large or substantial salary.

More impact on the company's future — stronger effect on long-term outcomes.

Bear more responsibility — carry greater accountability.

Adverse outcome — negative or harmful result.

Healthy working environment — supportive, positive workplace atmosphere.

Lucrative income — highly profitable or well-paid salary.

[illegible]

IELTS MODERN TRENDS & CONCEPTS

Environment & Climate

Trend / Concept	Short Description
Climate Change / Global Warming	Rising global temperatures due to greenhouse gases.
Greenhouse Effect	Heat trapped by gases like CO ₂ and methane.
The Urban Heat Island Effect	Cities trap heat due to concrete, cars, and population.
Deforestation / Reforestation	Forest loss and restoration.
Carbon Footprint	Total emissions by person or nation.
Renewable Energy Transition	Shift to solar, wind, hydro.
Sustainable Development	Growth balancing present and future needs.
Paris Agreement	Global climate treaty.
Biodiversity Loss	Decline in plant/animal species.
Eco-Friendly Innovations	Green tech (e.g., electric cars, biodegradable products).

Society, Culture & Lifestyle

Trend / Concept	Short Description
Peer Pressure	Influence to conform to group behavior.
FOMO (Fear of Missing Out)	Anxiety about missing social events.
Digital Detox	Taking breaks from technology.
Consumerism	Culture of overconsumption.
Minimalism	Choosing simplicity over materialism.
Cultural Homogenization	Cultures becoming similar through globalization.
Cultural Preservation	Protecting local heritage.
Social Conformity	Adjusting behavior to fit social norms.
To Follow Suit	Imitating others.
Individualism vs. Collectivism	Prioritizing self vs. community.

Education & Learning

Trend / Concept	Short Description
Lifelong Learning	Continuous education through life.
Online / Remote Learning	Studying via the internet.
EdTech (Education Technology)	Integration of AI, apps, digital tools in education.
Flipped Classroom	Students learn online before class discussions.

Trend / Concept	Short Description
STEM Education	Focus on Science, Technology, Engineering, Math.
Gamified Learning	Learning through interactive games.
Holistic Education	Focusing on emotional and moral growth.
Critical Thinking Skills	Teaching how to think, not what to think.
Digital Divide	Gap between those with and without tech access.

Urbanization & Infrastructure

Trend / Concept	Short Description
Smart Cities	Cities using tech for efficiency (AI, sensors).
Urban Sprawl	Expansion of cities into rural land.
Public Transit Revolution	Electric buses, metro systems, bike lanes.
Sustainable Architecture	Eco-friendly buildings using green design.
Gentrification	Revitalizing poor areas, often displacing locals.
Affordable Housing Crisis	Rising housing costs in cities.

Economy & Work

Trend / Concept	Short Description
Gig Economy	Freelance or short-term jobs (Uber, Fiverr).
Automation / AI Revolution	Machines replacing human labor.
Work-Life Balance	Managing job stress and leisure.
Remote Work / Telecommuting	Working from home.
Entrepreneurial Culture	Growth of start-ups and innovation.
Globalization	Interconnection of markets and people.
Corporate Social Responsibility (CSR)	Companies acting ethically.
Economic Inequality	Gap between rich and poor.

Science, Technology & Innovation

Trend / Concept	Short Description
Artificial Intelligence (AI)	Machines performing human-like tasks.
Automation	Replacement of manual work with machines.
Virtual / Augmented Reality	Immersive digital experiences.
Big Data	Massive data analysis guiding decisions.
Cybersecurity	Protecting data from online threats.

Trend / Concept	Short Description
E-Waste	Electronic waste from gadgets.
Space Exploration / Tourism	Commercial or scientific space travel.
Biotechnology / Genetic Engineering	DNA manipulation for health or crops.
Digital Surveillance	Government monitoring citizens online.

Health & Well-being

Trend / Concept	Short Description
Mental Health Awareness	Recognizing psychological well-being.
Sedentary Lifestyle	Lack of physical activity.
Obesity Epidemic	Global issue from fast food & inactivity.
Preventive Healthcare	Avoiding illness through lifestyle choices.
Telemedicine	Medical consultations via internet.
Dietary Trends (Veganism, Organic Food)	Ethical and health-based diets.
Workplace Stress	Pressure from job insecurity or workload.

Politics & Global Issues

Trend / Concept	Short Description
Paris Agreement	Climate treaty signed in 2015.
Refugee Crisis	Mass migration due to war or poverty.
Digital Censorship	Governments controlling online content.
International Sanctions	Restrictions on countries for political reasons.
Humanitarian Aid	Help to poor or disaster-hit nations.

Media & Communication

Trend / Concept	Short Description
Social Media Influence	Power of platforms like Instagram, TikTok.
Fake News / Misinformation	Spread of false information online.
Cancel Culture	Publicly rejecting individuals for actions.
Freedom of Speech vs. Hate Speech	Balancing expression and harm.
Digital Marketing / Influencer Economy	Selling through online personalities.
